

Pedestrian Scramble Crosswalk

Scramble crosswalks are a type of traffic signal phasing that stops all vehicle traffic to allow pedestrians to cross the intersection in every direction - including diagonally.

Crossing

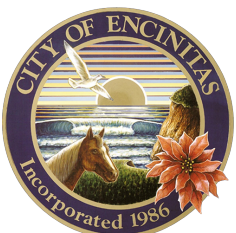

1. Please push the button once
2. Wait for the pedestrian symbols to come up on the pedestrian signal indicators at all corners of the intersection
3. When the pedestrian symbols are lit up, you may cross in any direction

How Scramble Crosswalks Work

- East/West traffic have green lights. **Pedestrians wait.**
- North/South traffic have green lights **Pedestrians wait.**
- All traffic have red lights. **Pedestrians may cross the intersection in any direction.**

Advantages

- Vehicles and pedestrians do not cross simultaneously, lessening the chance for conflicts
- Pedestrians crossing diagonally have a shorter wait time
- Vehicles do not have to wait for pedestrians to cross before turning
