Executive Summary

Marea Village Mixed-Use

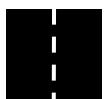

This Local Transportation Analysis (LTA) determines if the proposed project is calculated to create any traffic effects on the study area roadways in the vicinity of the project. The project includes a 30-room hotel, 94 multi-family units, and 18,261 square feet of commercial/retail space on the westside of North Coast Highway 101 approximately 500 feet south of La Costa Avenue located in the City of Encinitas, California. The project will replace an existing commercial/retail center of approximately 7,582 square feet with active businesses.

This analysis is based on the local San Diego Institute of Transportation Engineers (ITE) *Guidelines for Traffic Impact Studies in the San Diego Region*, May 2019 traffic analysis criteria. The project traffic generation was calculated using the SANDAG trip rates from the *Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002. The project site has active uses creating traffic; therefore, a traffic credit was applied because the existing uses will be replaced by the project. Additionally, the existing and proposed project have pass-by trips already on the study roadways. The project is calculated to generate a net increase of 1,122 ADT, 60 AM peak hour trips, and 102 PM peak hour trips. The project is calculated to have an effect to the following intersections because project traffic exceeds the allowable change in vehicular delays:

- 1) Intersection of N. Coast Highway 101/Bishops Gate under existing + project, and existing + cumulative + project conditions. A roundabout is proposed as part of the City's Streetscape Project; however, the roundabout is forecasted to operate at LOS E in the PM peak hour with project traffic. The AM peak hour is calculated to operate at acceptable LOS. The goal of Streetscape is to reduce the number of southbound vehicle lanes to accommodate a dedicated bike lane, reduce travel speeds, and implement roundabouts to better balanced mobility between motorists, bicyclists, and pedestrians. If the project pulls building permits before Streetscape completes the roundabout, then the project will provide a **fair share contribution of 6.2%** towards this roundabout or other City directed location as the proportional means to reduce the traffic effect.
- 2) Intersection of N. Coast Highway 101/Grandview St under existing + project conditions. A roundabout is proposed as part of the City's Streetscape Project. The roundabout is forecasted to operate at LOS E in the PM peak hour with project traffic; however, the project no longer has an effect with the roundabout because the change in delay is 0.6 seconds, which is less than the allowable 2.0 seconds. The AM peak hour is calculated to operate at acceptable LOS. The goal of Streetscape is to reduce the number of southbound vehicle lanes to accommodate a dedicated bike lane, reduce travel speeds, and implement roundabouts to better balanced mobility between motorists, bicyclists, and pedestrians. If the project pulls building permits before Streetscape completes the roundabout as the proportional means to reduce the traffic effect, then the project will provide a **fair share contribution of 2.9%** towards this roundabout or other City directed location.

- 3) Intersection of La Costa Ave/N. Vulcan Ave under existing + project + cumulative, and horizon year 2035 + project conditions. The traffic effect is reduced to acceptable LOS with an improvement of a traffic signal under existing + project + cumulative conditions. Under Existing + Project + Cumulative conditions, the recommended improvement is a **fair share contribution of 2.7%** towards a future traffic signal. Under horizon year 2035 + project conditions, in addition to a traffic signal an additional westbound left turn lane is required to have a forecasted acceptable LOS. Under Horizon Year 2035 + Project conditions, the recommended improvement is a **fair share contribution of 2.3%** toward a horizon year intersection improvement that may be a westbound left turn lane or other to be determined improvement as the proportional means to reduce the traffic effect.
- 4) Intersection of La Costa Ave/Sheridan Rd under horizon year 2035 + project conditions. The traffic effect is reduced to acceptable LOS with an improvement of a traffic signal. Under Horizon Year 2035 + Project conditions, the recommended improvement is a **fair share contribution of 2.4%** toward a horizon year 2035 traffic signal or other City directed location as the proportional means to reduce the traffic effect.

1.0 Introduction

The purpose of this Local Transportation Analysis is to analyze potential traffic effects from traffic generated by a mixed-use project consisting of 30-room resort hotel, 94 multi-family units, and 18,261 square feet of commercial/retail space on the westside of North Coast Highway 101 approximately 500 feet south of La Costa Avenue in the City of Encinitas, California. The project will replace an existing commercial/retail center of approximately 7,582 square feet with active businesses. The regional location of the project is shown in **Figure 1**. A site plan is shown in **Figure 2**.

This report describes the existing roadway network in the vicinity of the project site and includes a review of the existing and proposed activities for weekday peak AM and PM periods, and daily traffic conditions when the project is completed. The format of this study includes the following chapters:

- 1.0 Introduction
- 2.0 Transportation Analysis Methodology
- 3.0 Existing Conditions
- 4.0 Project Description
- 5.0 Existing + Project Conditions
- 6.0 Cumulative Projects
- 7.0 Existing + Cumulative Conditions
- 8.0 Existing + Cumulative + Project Conditions
- 9.0 Horizon Year 2035 Conditions
- 10.0 Horizon Year 2035 + Project Conditions
- 11.0 Project Traffic Effects
- 12.0 Conclusion
- 13.0 References

Traffic and Transportation

Marea Village Mixed-Use N. Coast Hwy 101 Draft LTA

2.0 Transportation Analysis Methodology

A Local Transportation Analysis (LTA) is provided to fulfill the Encinitas Municipal Code 23.08.060 requirement of a traffic analysis for projects with more than 2,000 square feet of building area and/or any residential project with five or more units.

This traffic study was prepared based on direction from City staff on the study intersections and roadway segments; the scenarios to be analyzed; and the methods required for analysis. The criteria for each of these parameters are included herein.

2.1 Study Area

The following intersections were included in this study:

- 1) Carlsbad Blvd SB/Avenida Encinas (signalized)
- 2) Carlsbad Blvd NB/Avenida Encinas (signalized)
- 3) North Coast Highway 101/La Costa Ave (signalized)
- 4) North Coast Highway 101/Project Access (future intersection)
- 5) North Coast Highway 101/Bishops Gate (un-signalized)
- 6) North Coast Highway 101/Grandview St (un-signalized)
- 7) North Coast Highway 101/Sands Mobile Home Park (un-signalized)
- 8) North Coast Highway 101/Jupiter St (un-signalized)
- 9) North Coast Highway 101/Leucadia Ave (signalized)
- 10) La Costa Avenue/N. Vulcan Avenue (un-signalized)
- 11) La Costa Avenue/Sheridan Rd (un-signalized)
- 12) La Costa Avenue/I-5 Southbound Ramps (signalized)
- 13) La Costa Avenue/I-5 Northbound Ramps (signalized)

The following street segments were included in this study:

- 1) Carlsbad Blvd from Avenida Encinas to La Costa Ave
- 2) North Coast Highway 101 from La Costa Ave to 600 ft S. of La Costa Ave
- 3) North Coast Highway 101 from 600 ft S. of La Costa Ave to Bishops Gate
- 4) North Coast Highway 101 from Bishops Gate to Grandview St
- 5) North Coast Highway 101 from Grandview St to Jupiter St
- 6) North Coast Highway 101 from Jupiter St to Leucadia Blvd
- 7) La Costa Avenue from N. Coast Highway 101 to N. Vulcan Ave
- 8) La Costa Avenue from N. Vulcan Ave to Sheridan Rd
- 9) La Costa Avenue from Sheridan Rd to I-5

2.2 Study Scenarios

The number of scenarios to be analyzed is typically based on the size of the project. For this project, the following scenarios were included based on direction from City staff:

- 1) Existing Conditions
- 2) Existing + Project Conditions
- 3) Existing + Cumulative Conditions (cumulative projects and planned roadway changes)
- 4) Existing + Cumulative + Project Conditions
- 5) Horizon Year 2035 Streetscape EIR Conditions
- 6) Horizon Year 2035 Streetscape EIR + Project Conditions

2.3 Traffic Analysis Methodology

The traffic analyses prepared for this study were based on the *Highway Capacity Manual* (HCM) operations analysis using Level of Service (LOS) evaluation criteria. The operating conditions of the study intersections and street segments were measured using the HCM LOS designations, which ranges from A through F. LOS A represents the best operating condition and LOS F denotes the worst operating condition.

2.3.1 Intersections

Two of the study intersections are located within the City of Carlsbad while the remaining intersections are located within the City of Encinitas. The same LOS criteria was applied to all study intersections.

The study intersections were analyzed based on the **operational analysis** outlined in the 6th Edition HCM. This process defines LOS in terms of **average control delay** per vehicle, which is measured in seconds. LOS at the intersections were calculated using the computer software program Synchro 10 (Trafficware Corporation). The 6th Edition HCM LOS for the range of delay by seconds for intersections is shown in **Table 1**.

TABLE 1: INTERSECTION LEVEL OF SERVICE DEFINITIONS (6TH EDITION HCM)

Level of Service	Un-Signalized Control Delay for TWSC, AWSC, and Roundabout (sec/veh where v/c < 1)	Signalized Control Delay (sec/veh where v/c ≤ 1)
A	0-10	≤ 10
B	> 10-15	> 10-20
C	> 15-25	> 20-35
D	> 25-35	> 35-55
E	> 35-50	> 55-80
F	> 50	> 80

Source: 6th Edition HCM. TWSC: Two Way Stop Control. AWSC: All Way Stop Control. For unsignalized intersections, the control delay is the worst movement delay in seconds/vehicle.

Please note that the 6th Edition of HCM does not support intersection analyses for clustered intersections, such as Carlsbad Blvd SB & NB at Avenida Encinas. At these two locations, HCM 2000 was used for the analysis. The HCM 2000 LOS for the range of delay by seconds for intersections is shown in **Table 2**.

TABLE 2: INTERSECTION LEVEL OF SERVICE (HCM 2000)

Level of Service	Un-Signalized Control Delay (seconds/vehicle)	Signalized Control Delay (seconds/vehicle)
A	0-10	0-10
B	> 10-15	> 10-20
C	> 15-25	> 20-35
D	> 25-35	> 35-55
E	>35-50	> 55-80
F	> 50	> 80

Source: Highway Capacity Manual 2000.

2.3.2 Street Segments

Street segment capacities were analyzed based on the underlying jurisdiction's criteria. N. Coast Hwy 101 north of La Costa Ave becomes Carlsbad Blvd. Carlsbad Blvd was analyzed using the City of Carlsbad criteria while the N. Coast Hwy 101 and La Costa Ave were analyzed using City of Encinitas criteria.

The City of Carlsbad uses a one-direction capacity of 1,820 vehicles per lane per hour for LOS capacity calculations for Carlsbad Blvd based on the physical characteristic of 2 travel lanes (per direction) on a divided roadway with a 50 MPH speed limit. The source of the Carlsbad segment capacity is included in **Appendix A**. The segment LOS based on the directional lane capacity is shown in **Table 3**.

TABLE 3: CARLSBAD BLVD STREET SEGMENT LOS BASED ON LANE CAPACITY

Level of Service	Lane Capacity (Vehicles)
C	850
D	1,690
E	1,850
F	Greater 1,850

Source: City of Carlsbad Growth Management Program Year 2018 Traffic Conditions Report.

The street segment daily volumes were analyzed based on the functional classification of the roadway using the City of Encinitas *Public Road Standards* General Plan Circulation Element Roadway Capacity Standards and the peak hour directional segment methodology as outlined in the *North Coast Highway 101 Leucadia Streetscape Improvement Project* Final EIR, dated February 2018 ("Streetscape EIR"). The daily segment volumes provide an initial capacity check to comply with the City's General Plan while the peak hour directional segment methodology provides a more detailed LOS analysis as used in the Streetscape EIR. The peak hour directional segment analysis was used to determine if the project traffic created a traffic effect for consistency with the Streetscape EIR.

The roadway segment daily capacity based on the General Plan are summarized in **Table 4**. The City of Encinitas General Plan segment capacities are included in **Appendix B**.

TABLE 4: STREET SEGMENT DAILY CAPACITY AND LOS (CITY OF ENCINITAS)

Facility Type	Number of Lanes	LOS C	LOS D	LOS E
Prime Arterial	6	<46,000	<51,200	<57,000
Prime Arterial – Augmented	6	<53,000	<60,000	<66,000
Major Roadway	4	<28,200	<31,600	<35,200
Major Roadway - Augmented	4+	<36,300	<41,000	<45,400
Collector Roadway	4	<26,000	<29,200	<32,400
Modified Major (1)	3	<21,150	<23,700	<26,400
Local Roadway - Augmented	2+	<16,000	<18,000	<20,000
Local Roadway	2	<11,200	<12,600	<14,000

Source: City of Encinitas *Public Road Standards* April 1991. (1) The 3 lane Major capacity taken at 75% of the 4-lane capacity as documented in the City of Encinitas Housing Element Traffic Impact Study, Jan 27, 2016.

Portions of North Coast Highway 101 are reduced to three lanes (two lanes in one direction and one lane in the remaining direction). The capacity for the three-lane section was based on 75% of a 4-lane roadway as documented in the *City of Encinitas Housing Element* Traffic Impact Study, January 27, 2016. Excerpts from the City of Encinitas Housing Element are included in **Appendix C**.

A detailed peak hour directional segment methodology was used for the segment analysis as documented in the *North Coast Highway 101 Leucadia Streetscape Improvement Project* Final EIR, dated February 2018 (“Streetscape EIR”). Excerpts from the Michael Baker International (MBI) traffic study prepared for the Streetscape EIR documenting the directional segment methodology are included in **Appendix D**. The segment LOS thresholds are summarized in **Table 5**.

TABLE 5: CITY OF ENCINITAS STREET SEGMENT LOS BASED ON V/C RATIOS (STREETSCAPE EIR)

LOS Engineering, Inc.

Traffic and Transportation

Marea Village Mixed-Use N. Coast Hwy 101 Draft LTA

2.4 Project's Transportation Effect

If a proposed project's traffic causes the values shown in the **Table 6** to be exceeded, the effects of the project are determined to justify improvements (ITE excerpts included in **Appendix E**).

TABLE 6: CITY OF ENCINITAS DETERMINATION FOR POTENTIAL ROADWAY IMPROVEMENTS

Level of Service with Project*	Allowable Change Due to Project Effect**				
	Freeways	Roadway Segments	Intersections	Ramp Metering	
V/C	V/C	Speed (mph)	Delay (sec.)	Delay (min.)	
E & F	0.01	0.02	1	2	2*

Source: San Diego ITE Guidelines for Transportation Impact Studies in the San Diego Region, 2019.

* All level of service measurements are based upon Highway Capacity Manual (HCM) procedures for peak-hour conditions. The target LOS for freeways, roadways, and intersections is generally "D". For metered freeway ramps, LOS does not apply; however, ramp meter delays above 15 minutes are considered excessive.

** If a proposed project's traffic causes the values shown in the table to be exceeded, the effects of the project are determined to justify improvements. These changes may be measured from appropriate computer programs or expanded manual spreadsheets. The project applicant shall then identify feasible improvements within the LTA report that will maintain the traffic facility at the target LOS or restore to pre-project conditions. If the LOS with the proposed project becomes worse than the target (see above * note), or if the project adds a significant amount of peak-hour trips to cause any traffic queues to exceed on- or off-ramp storage capacities, roadway improvements should be considered.

*** See Attachment B for ramp metering analysis.

Key: V/C = Volume to Capacity

Speed = Speed measured in miles per hour

Delay = Average stopped delay per vehicle measures in seconds for intersection, or minutes for ramp meters

LOS = Level of Service

3.0 Existing Conditions

This section describes the study area streets, peak hour volumes, and existing LOS.

3.1 Existing Street System

In the vicinity of the project, the following roadways were analyzed for this report and are described below. The General Plan street classifications are ultimate classifications. The existing roadway conditions are shown in **Figure 3**.

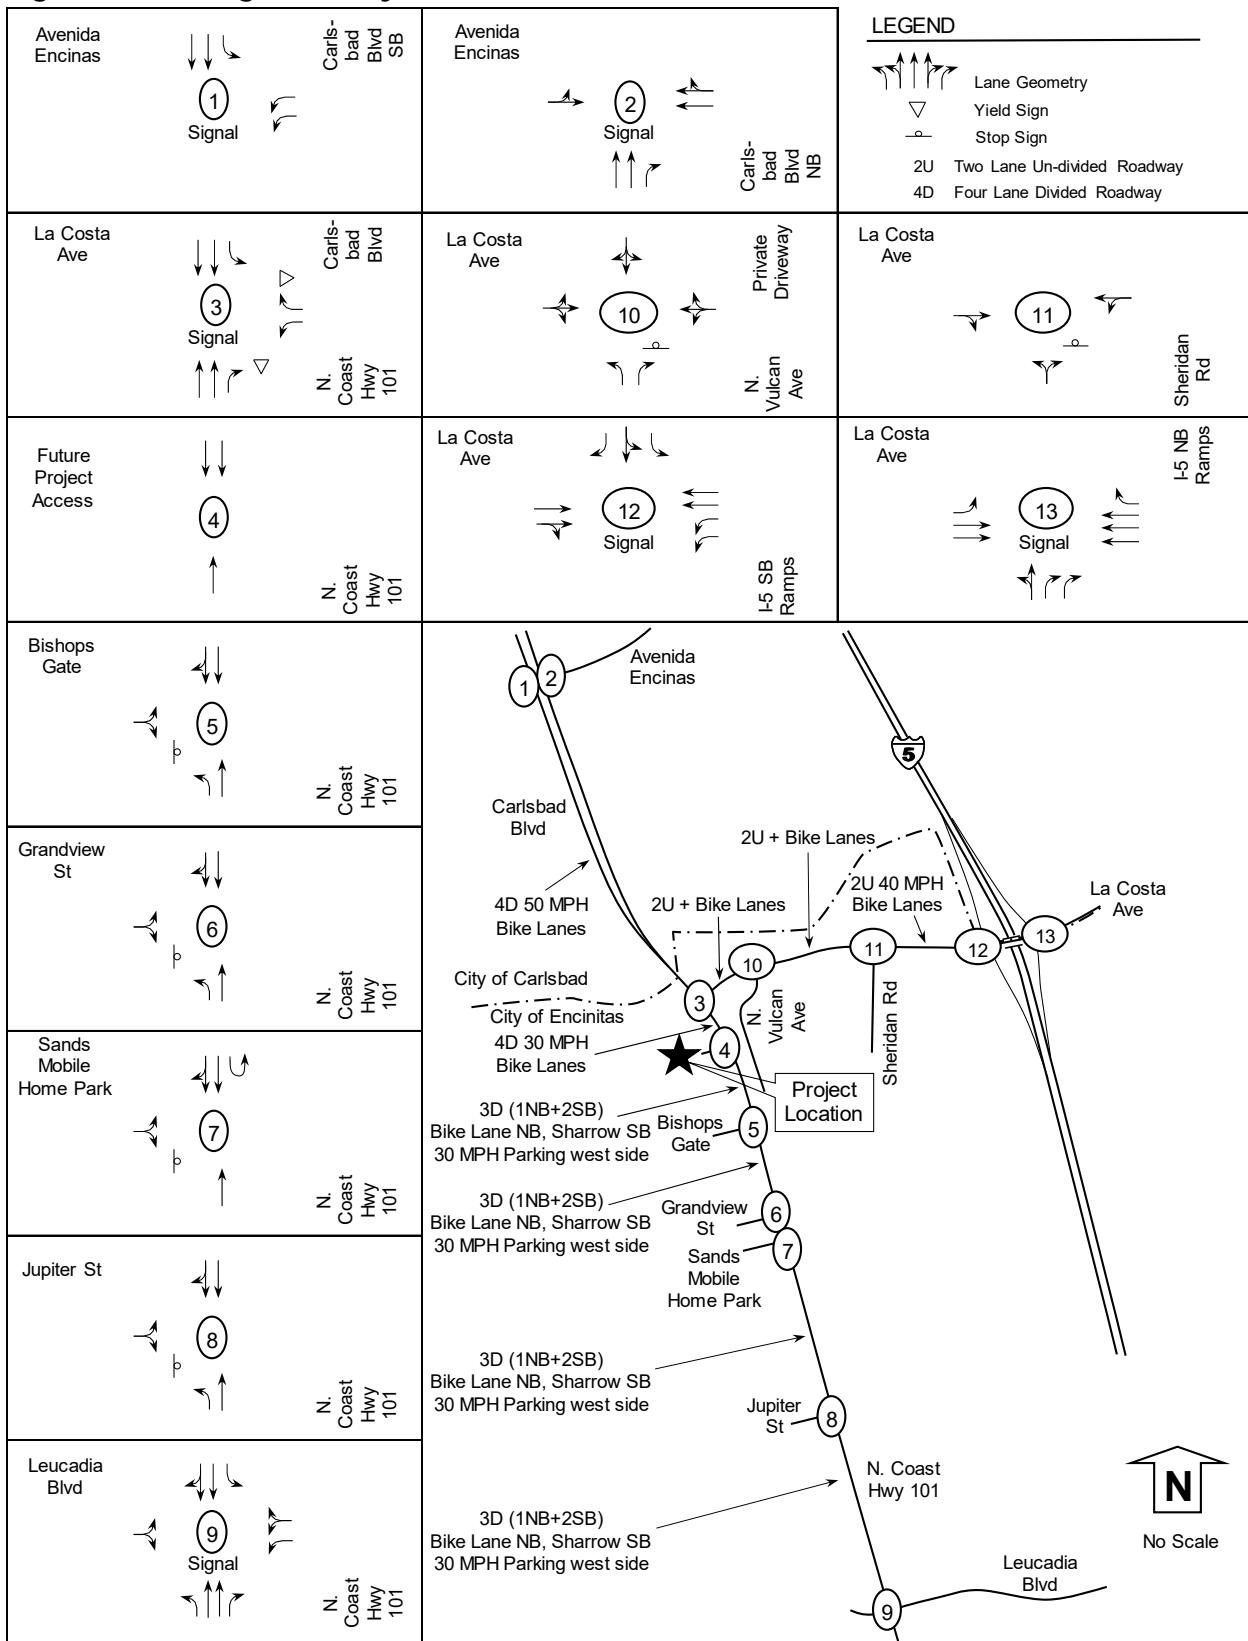

Carlsbad Boulevard from Avenida Encinas to La Costa Ave is mostly constructed as a four (4) lane divided roadway with two travel lanes in each direction. Bike lanes are provided on both sides of the roadway. There are no sidewalks on this segment. The posted speed limit is 50 Miles Per Hour (MPH). This segment of La Costa Avenue is classified as a *Coastal Street* in the *Carlsbad General Plan*, September 2015 (excerpt included in **Appendix F**).

La Costa Avenue from North Coast Highway 101 to I-5 is currently constructed as a two (2) lane roadway with one travel lane in each direction. Bike lanes are provided on both sides of the roadway. There are no sidewalks on this segment. The posted speed limit is 40 Miles Per Hour (MPH). This segment of La Costa Avenue is classified as a 4-lane *Collector Roadway* on the City of Encinitas Circulation Plan (**Appendix G**).

North Coast Highway 101 from the City of Carlsbad limits to La Costa Avenue is constructed as a four (4) lane divided roadway. North Coast Highway 101 from La Costa Avenue to approximately 600 feet south of La Costa Avenue is generally built as a four (4) lane divided roadway with bike lanes in each direction. North Coast Highway 101 from approximately 600 feet south of La Costa Avenue to Leucadia Blvd is generally built as a three (3) lane divided roadway with 1 northbound lane with adjacent Class II bike lane and 2 southbound lanes with the outside lane having intermittent bike “Sharrows” markings (Class III). Parking is generally permitted. The posted speed limit is 35 MPH. This segment is classified as a 4-lane *Major Roadway* on the City of Encinitas Circulation Plan (**Appendix G**).

Figure 3: Existing Roadway Conditions

3.2 Existing Traffic Volumes and LOS Analyses

Intersection counts were collected between 7:00 AM to 9:00 AM for the AM commuter period and from 4:00 PM to 6:00 PM for the PM commuter period. The count dates are noted in parentheses for the study intersections below:

- 1) Carlsbad Blvd SB/Avenida Encinas (Thurs, November 7, 2019)
- 2) Carlsbad Blvd NB/Avenida Encinas (Thurs, November 7, 2019)
- 3) North Coast Highway 101/La Costa Ave (Thurs, November 7, 2019)
- 4) North Coast Highway 101/Project Access (through movement vol. from above intersection)
- 5) North Coast Highway 101/Bishops Gate (Wed, November 13, 2019)
- 6) North Coast Highway 101/Grandview St (Wed, November 13, 2019)
- 7) North Coast Highway 101/Sands Mobile Home Park (Thurs, November 7, 2019)
- 8) North Coast Highway 101/Jupiter St (Wed, November 13, 2019)
- 9) North Coast Highway 101/Leucadia Ave (Thurs, November 7, 2019)
- 10) La Costa Avenue/N. Vulcan Avenue (Tue, February 4, 2020)
- 11) La Costa Avenue/Sheridan Rd (Thurs, November 7, 2019)
- 12) La Costa Avenue/I-5 Southbound Ramps (Thurs, November 7, 2019)
- 13) La Costa Avenue/I-5 Northbound Ramps (Thurs, November 7, 2019)

Daily counts (24 hour) were collected for the study segments with count dates noted in parentheses below:

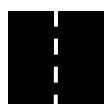

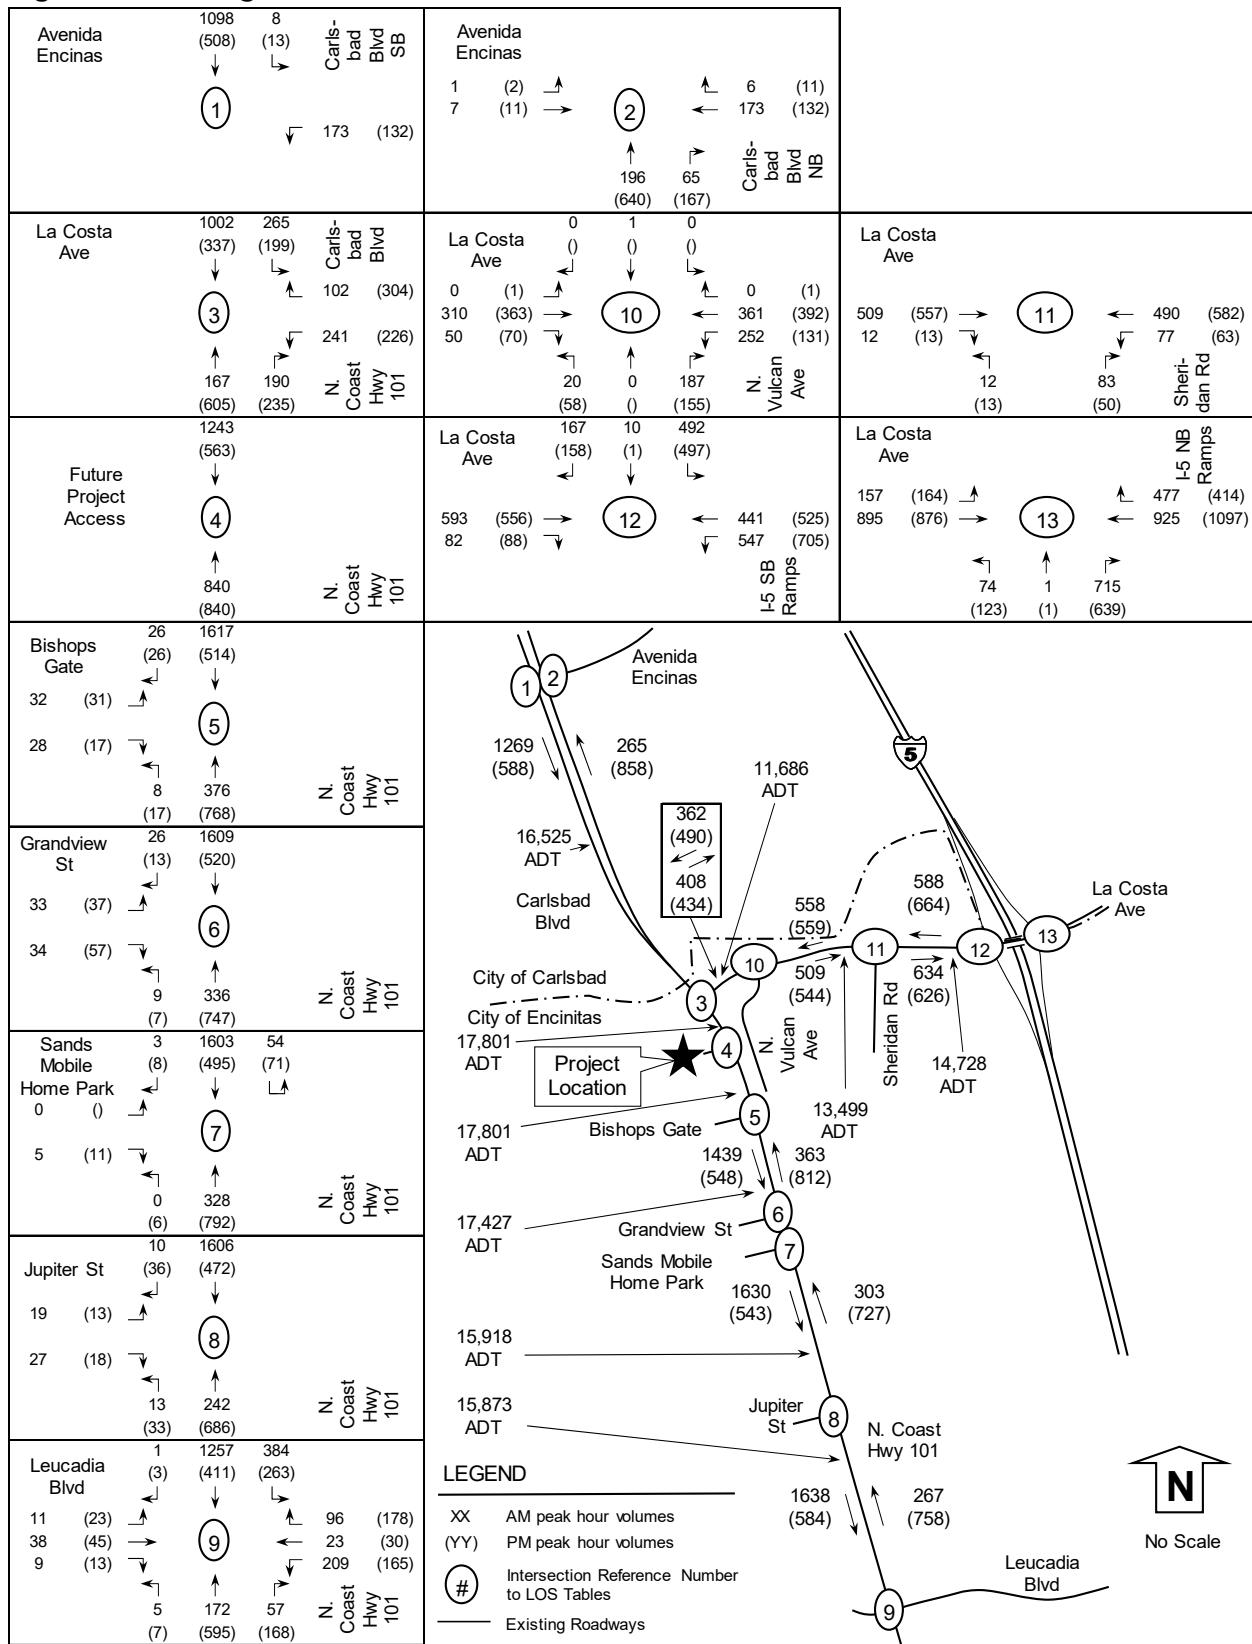

- 1) Carlsbad Blvd from Avenida Encinas to La Costa Ave (Thurs, November 7, 2019)
- 2) North Coast Highway 101 from La Costa Ave to 600 ft S. of La Costa Ave (Wed, November 13, 2019)
- 3) North Coast Highway 101 from 600 ft S. of La Costa Ave to Bishops Gate (Wed, November 13, 2019)
- 4) North Coast Highway 101 from Bishops Gate to Grandview St (Wed, November 13, 2019)
- 5) North Coast Highway 101 from Grandview St to Jupiter St (Wed, November 13, 2019)
- 6) North Coast Highway 101 from Jupiter St to Leucadia Blvd (Wed, November 13, 2019)
- 7) La Costa Avenue from N. Coast Highway 101 to N. Vulcan Ave (Thurs, November 7, 2019)
- 8) La Costa Avenue from N. Vulcan Ave to Sheridan Rd (Thurs, November 7, 2019)
- 9) La Costa Avenue from Sheridan Rd to I-5 (Thurs, November 7, 2019)

The peak hours volumes used for the segment analysis were obtained from adjacent intersection volumes for near-term conditions and from the Streetscape EIR for horizon year conditions. The near-term peak hour segment volumes were averaged from the intersections bracketing the segment.

Existing volumes are shown on **Figure 4**, with count data included in **Appendix H**.

Figure 4: Existing Volumes

The LOS calculated for the intersection is shown in **Table 7**. The daily capacity for the street segments is shown in **Table 8** with the segments hourly LOS shown **Table 9**. For unsignalized intersections, the minor approach delay is shown if the minor leg is a public street and overall delay is shown if the minor approach is a private driveway such as the project driveway. Intersection LOS calculations are included in **Appendix I**.

Carlsbad Blvd capacity from Carlsbad 2018 Growth Management Program. Remaining capacities from Streetscape Final EIR.

Under existing conditions, the study elements were calculated to operate at LOS D or better, except for:

- 1) Intersection of N. Coast Highway 101/Bishops Gate (LOS E AM),
- 2) Intersection of N. Coast Highway 101/Grandview St (LOS F AM),
- 3) Intersection of N. Coast Highway 101/Jupiter St (LOS E AM),
- 4) Intersection of La Costa Ave/N. Vulcan Ave (LOS E AM), and
- 5) Segment of La Costa Ave from N. Vulcan to Sheridan (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hours operations).

4.0 Project Description

The mixed-use project includes a 30-room hotel, 96 multi-family units, and 18,261 square feet of commercial/retail space on the westside of North Coast Highway 101 approximately 500 feet south of La Costa Avenue located in the City of Encinitas, California. The project will replace a commercial/retail center with approximately 7,582 square feet of active businesses.

4.1 Project Traffic Generation

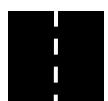

Project traffic generation was calculated using the San Diego Association of Governments (SANDAG) trip rates from the *Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002. The project site has active uses creating traffic; therefore, a traffic credit was applied because the existing uses will be replaced by the project. Additionally, the existing and proposed project have pass-by trips already on the study roadways. The project is calculated to generate a net increase of 1,122 ADT, 60 AM peak hour trips (22 inbound and 38 outbound), and 102 PM peak hour trips (58 inbound and 44 outbound) as shown in **Table 10**.

4.2 Construction Traffic Generation

Project construction traffic was based on client provided data forecasted for the project site based on experience at similarly sized construction sites. Construction traffic includes soil export, deliveries, and workers based on the different phases of construction activities.

Soil export accounts for the removal of soil and sand to which the sand export may be used for beach replenishment (if implemented). The destination of soil export and potential sand replenishment locations are currently unknown. Therefore, the applicant/operator will be instructed to use truck legal routes as identified in the City of Encinitas and Carlsbad Municipal codes. The truck legal routes include Carlsbad Blvd, Coast Highway, Encinitas Blvd, La Costa Ave, and Palomar Airport Rd. The trucks removing the export may use a variation of the noted truck legal routes to reach I-5 and beach restoration areas. The export is forecasted require up to 60 workdays (this incorporates weather and/or construction sequencing delays) with an anticipated maximum of 85 truck per day from approximately 7 AM to 7 PM. The export operations ADT is calculated by multiplying 85 trucks by 2 for a round trip of 170 ADT that is multiplied by a Passenger Car Equivalent (PCE) of 2.0 to equal 340 ADT. The export operations are anticipated to occur over a 10 to 12-hour day resulting in a range of 28 to 34 peak hour trips. The higher 34 peak hour trips equate to approximately 17 inbound and 17 outbound PCE trips (while the actual number of trucks would be approximately 8 or 9 inbound and 8 or 9 outbound due to the PCE). In addition to the truck trips, the export operations will have up to 35 employees (70 ADT) that typically arrive on site just before 7 AM and leave on or around 7 PM, which are outside the commuter peak periods. Therefore, the employee peak hour trips are forecasted at 5 AM inbound with 0 outbound and 0 PM inbound and 5 outbound. The combination of truck export and employees results in a forecasted daily trip total of 410 ADT, an AM peak hour of 23 trips (14 inbound and 9 outbound) and 23 PM trips (9 inbound and 14 outbound). Construction workers are forecasted to park on-site or along Coast Highway during the soil export phase.

Site construction covers the initial foundation to the final finish work. The highest concentration occurs during the interior and final site work phase (for about 5 months) with up to 200 construction workers (440 ADT). These workers start at 7 AM, thus they will arrive before 7AM and will not add traffic during the 7-9 AM peak hour period. These workers will typically leave around 3:30 PM with approximately 20% staying late on concrete pour days or other prolonged construction elements (but not all days). Thus, the PM peak hour may have up to 40 PM outbound construction worker trips on some days. Delivery of materials and concrete will vary significantly during the overall construction; however, the highest truck concentration is anticipated to be concrete trucks required for vertical pours resulting in approximately 10 trucks per day ($20 \text{ ADT} \times 2 \text{ PCE} = 40 \text{ ADT}$). The concrete deliveries typically are spread throughout the day and are anticipated to have 2 AM and 2 PM peak hour trips (1 inbound and 1 outbound). When converted to a PCE, the peak hour trips are calculated at 4 AM and 4 PM peak hour trips (2 inbound and 2 outbound). The highest parking requirements occurs for about 5 months during the peak of up to 200 construction workers. During this peak period, trade partners are requested to have their workers carpool, which is already observed to occur on the adjacent construction project. Therefore, the anticipated parking needs during this peak period is about 140 spaces. Construction parking is proposed on-site (about 30 spaces) and along east side of Coast Highway south of La Costa Ave (unassigned area that can accommodate the temporary 110 spaces) to accommodate the peak 5-month parking demand of about 140 spaces.

As shown in **Table 11**, the peak construction trip generation of 440 ADT, 23 AM peak hour trips, and 50 PM peak hour trips is less than what was analyzed for the project; therefore, the project trip generation analysis accounts for the analysis of construction traffic.

TABLE 11: PROJECT CONSTRUCTION TRIP GENERATION

Construction Trip Generation by Phase	Approximate Duration by Phase	Construction Workers by Phase	Deliveries/Trucks by Phase	ADT	AM Pk Hr		PM Pk Hr	
					1hr btw 7-9 IN	1hr btw 7-9 OUT	1hr btw 4-6 IN	1hr btw 4-6 OUT
Soil Export	2-3 months	up to 35	85	410	14	9	9	14
Site Construction	about 15 months	up to 200	10	440	2	2	2	41
				Maximum:	440	14	9	41

4.3 Project Access

The project access is proposed with full ingress movements and right-turn only egress movement.

4.4 Project Distribution and Assignment

Project trips were distributed to the adjacent roadway network based on surrounding productions and attractions, access to I-5, and coordination with City staff.

The project traffic that will be added to the study area is based on the net change in primary and diverted trips that accounts for the trip credit of the existing commercial use being replaced by this project. The Project access was analyzed using driveway trips without applying the trip credit whereas the non-driveway intersections were analyzed with the application of the trip credit.

The City's Streetscape project will affect the project distribution along N. Coast Hwy 101 just south of the project. All of the outbound project traffic initially travels south with 60% making a U-turn to travel north. Before the implementation of Streetscape, the first possible location to make a U-turn from a southbound left turn bay is at the Sands Mobile Park median break (intersection #7). After the implementation of Streetscape, the first U-turn will be possible at Bishops Gate (Intersection #5) because this intersection will become a roundabout. Details regarding the driveway trips, primary and diverted trips before and after Streetscape are included in **Appendix J**.

The project distribution before Streetscape is shown in **Figure 5** with assignment of project volumes shown in **Figure 6**.

The project distribution after Streetscape is shown in **Figure 7** with assignment of project volumes shown in **Figure 8**.

4.5 Project On-Site Parking

The project parking details are located on the Architectural site plan, which include a requirement of 256.5 spaces with 257 proposed spaces. Additionally, 6 bicycle spaces and 9 motorcycle spaces will be provided.

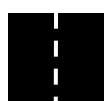

Figure 5: Project Distribution (Before Streetscape)

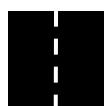

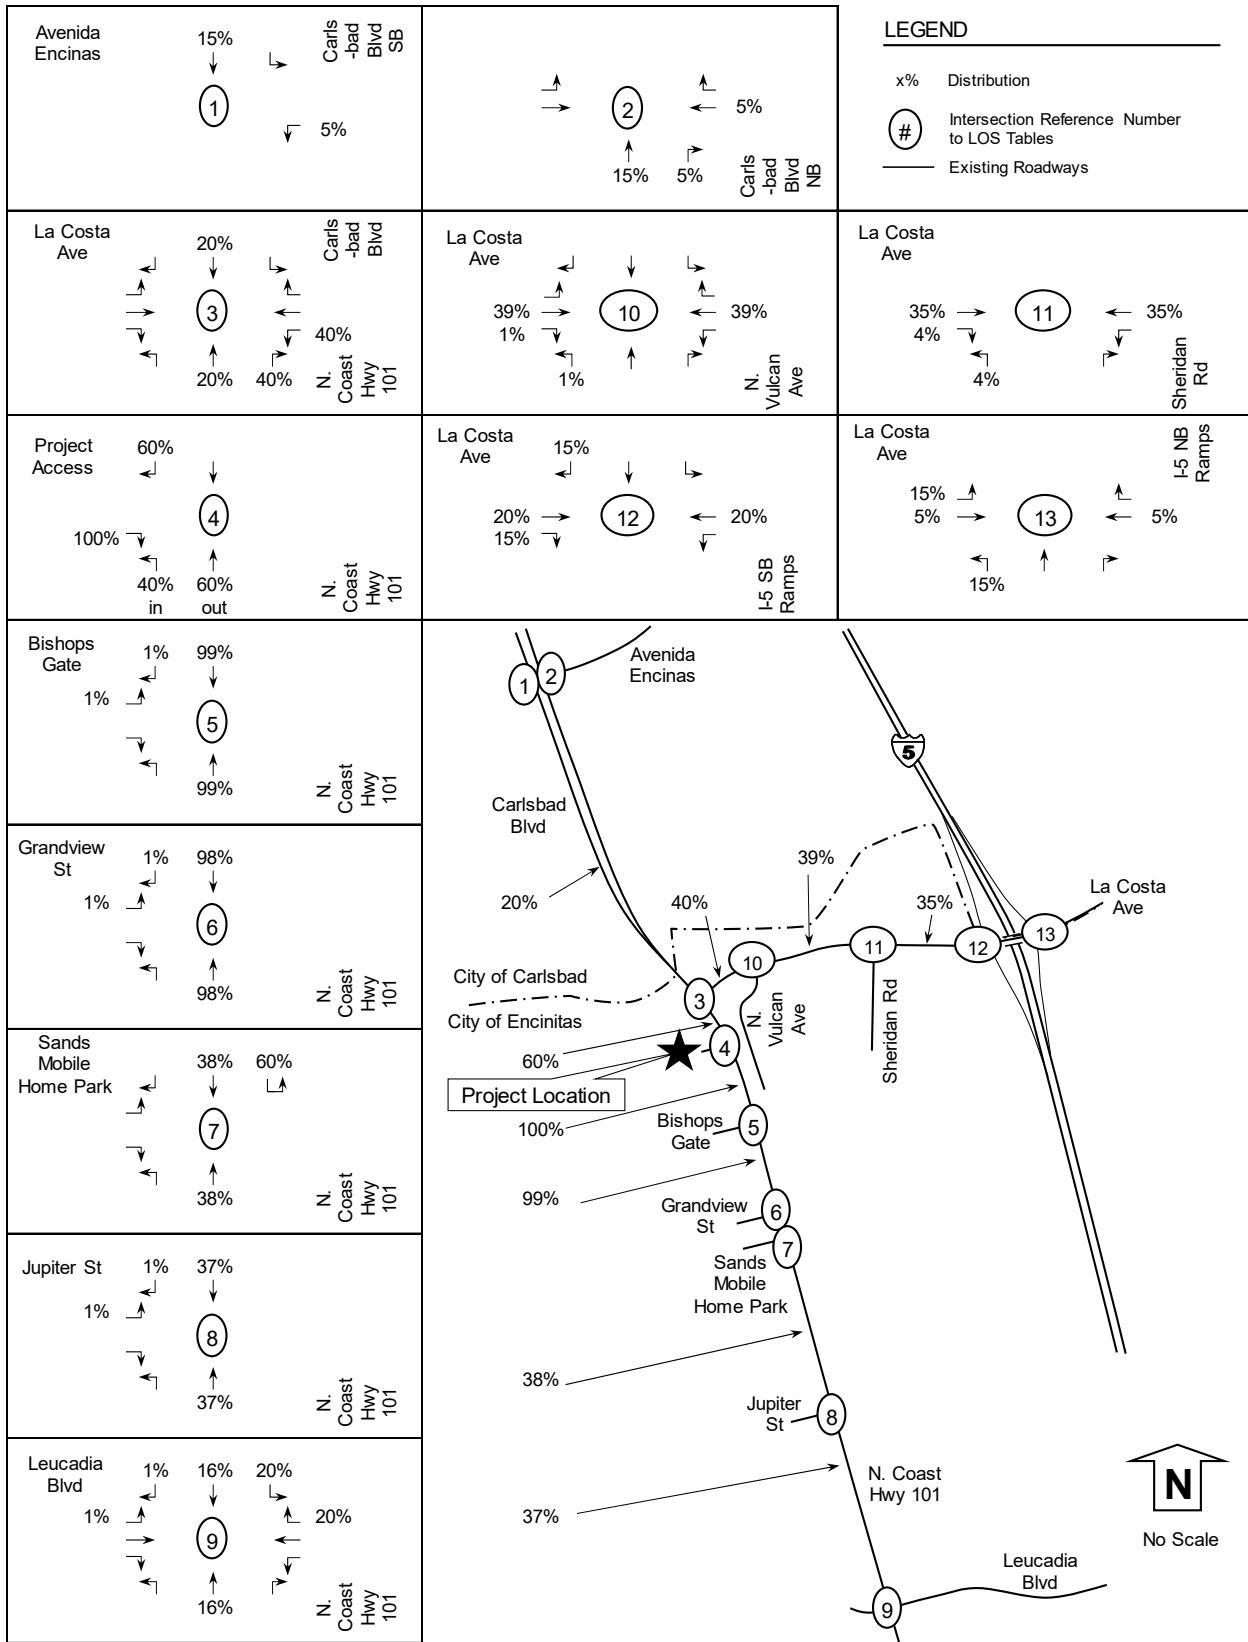

Figure 6: Project Volumes (Before Streetscape)

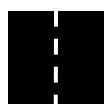

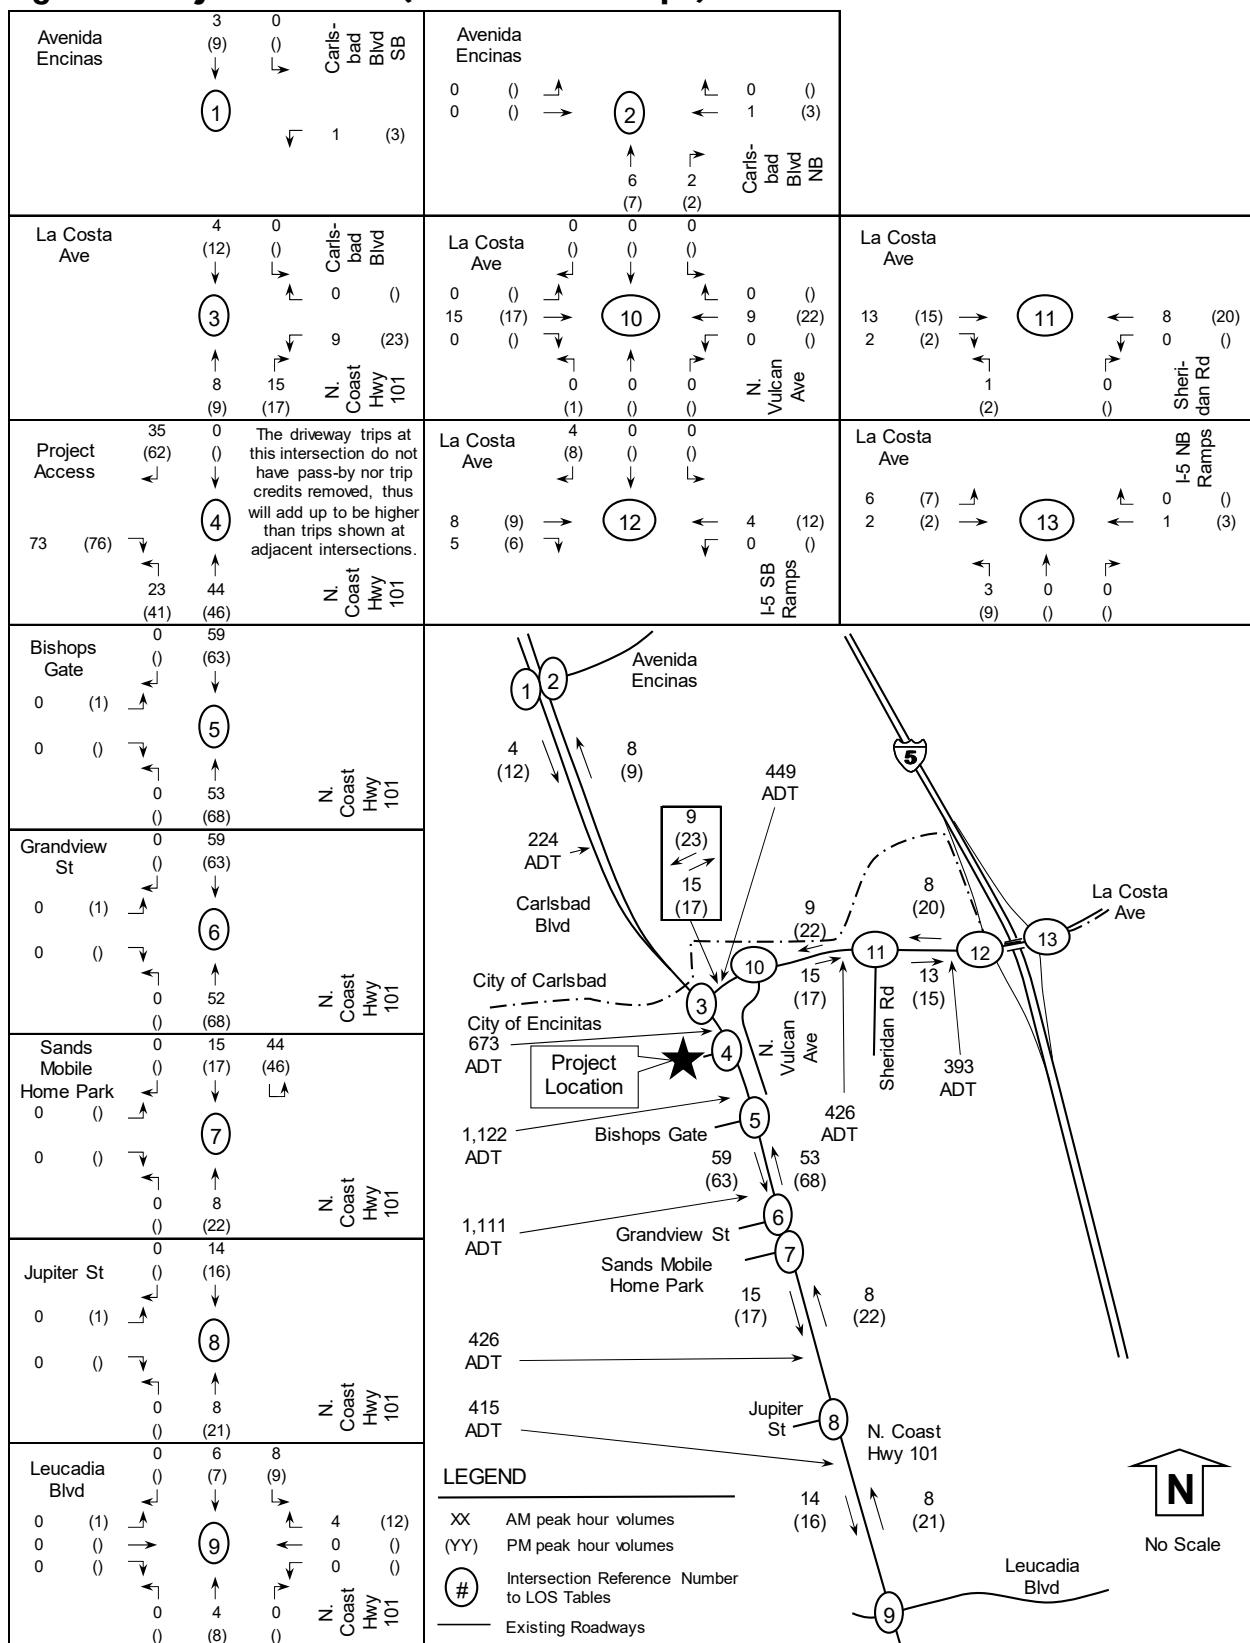

Figure 7: Project Distribution (After Streetscape)

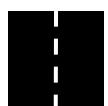

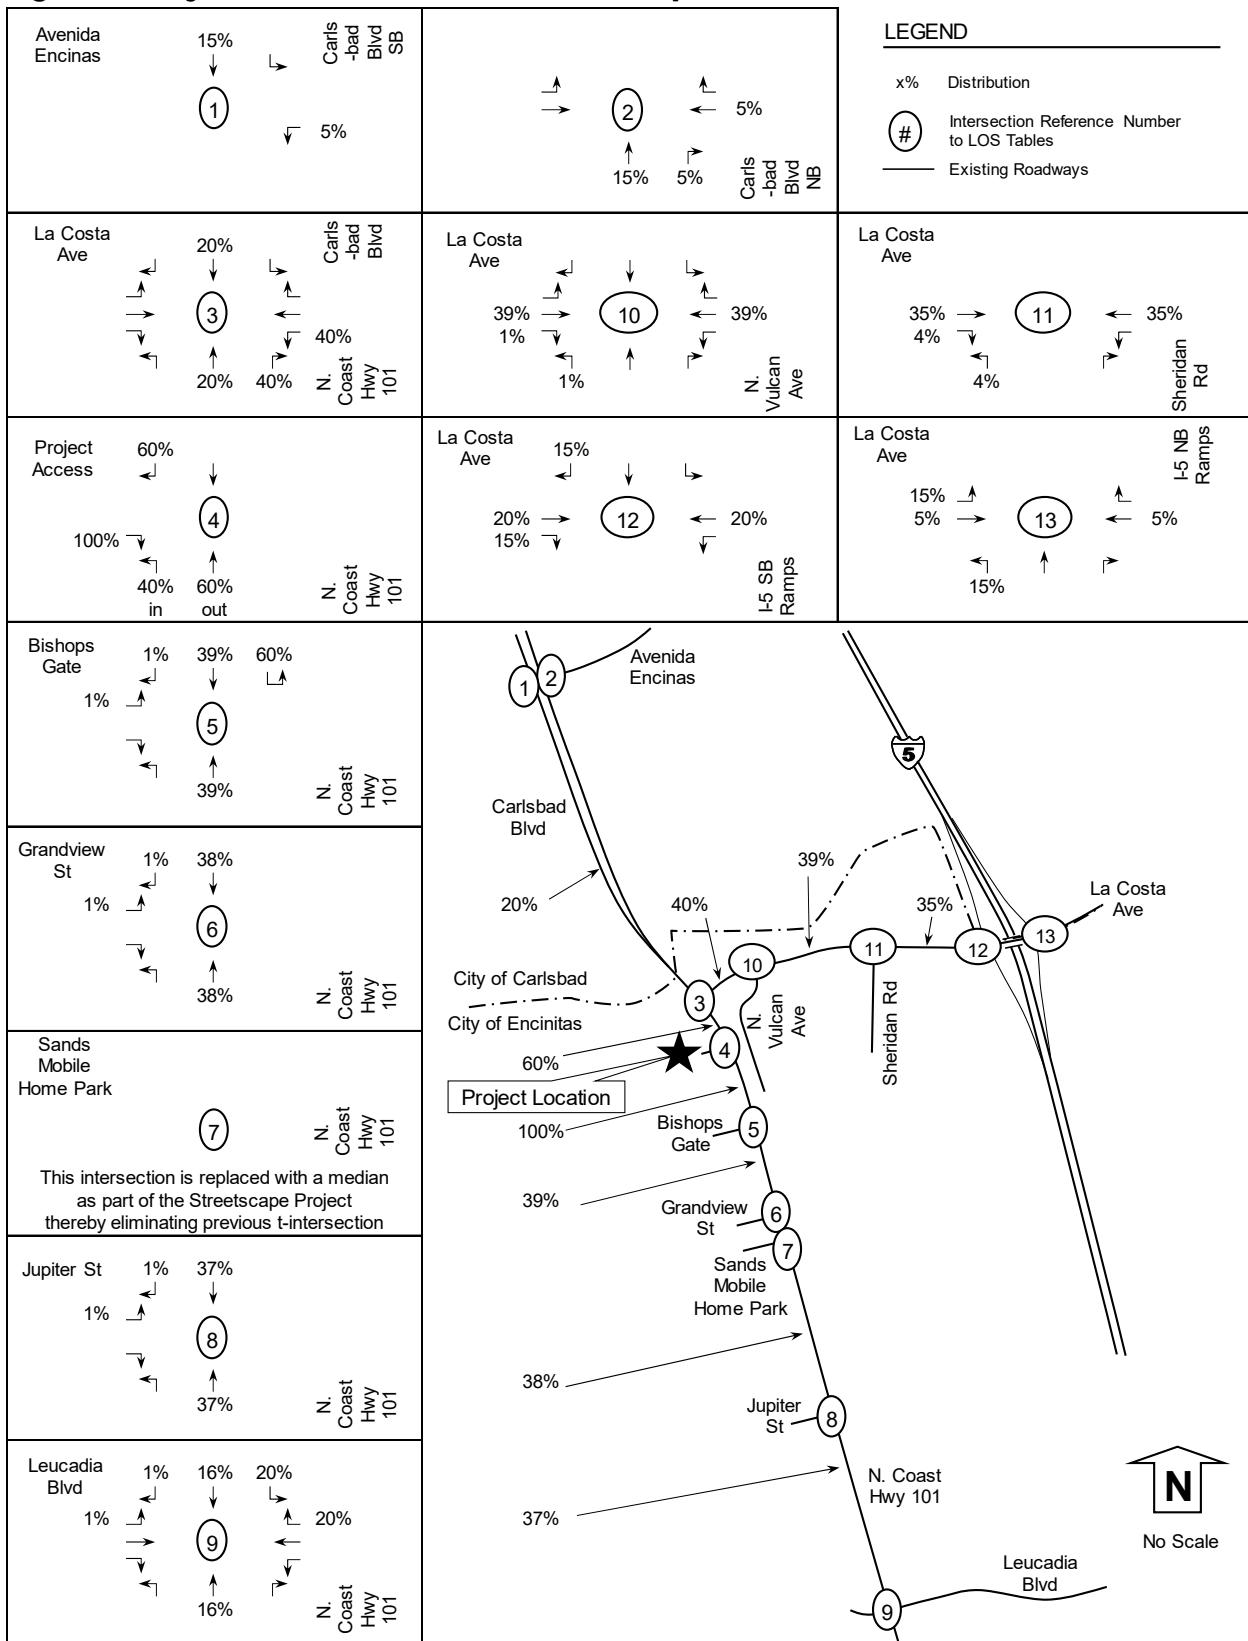

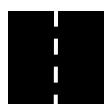

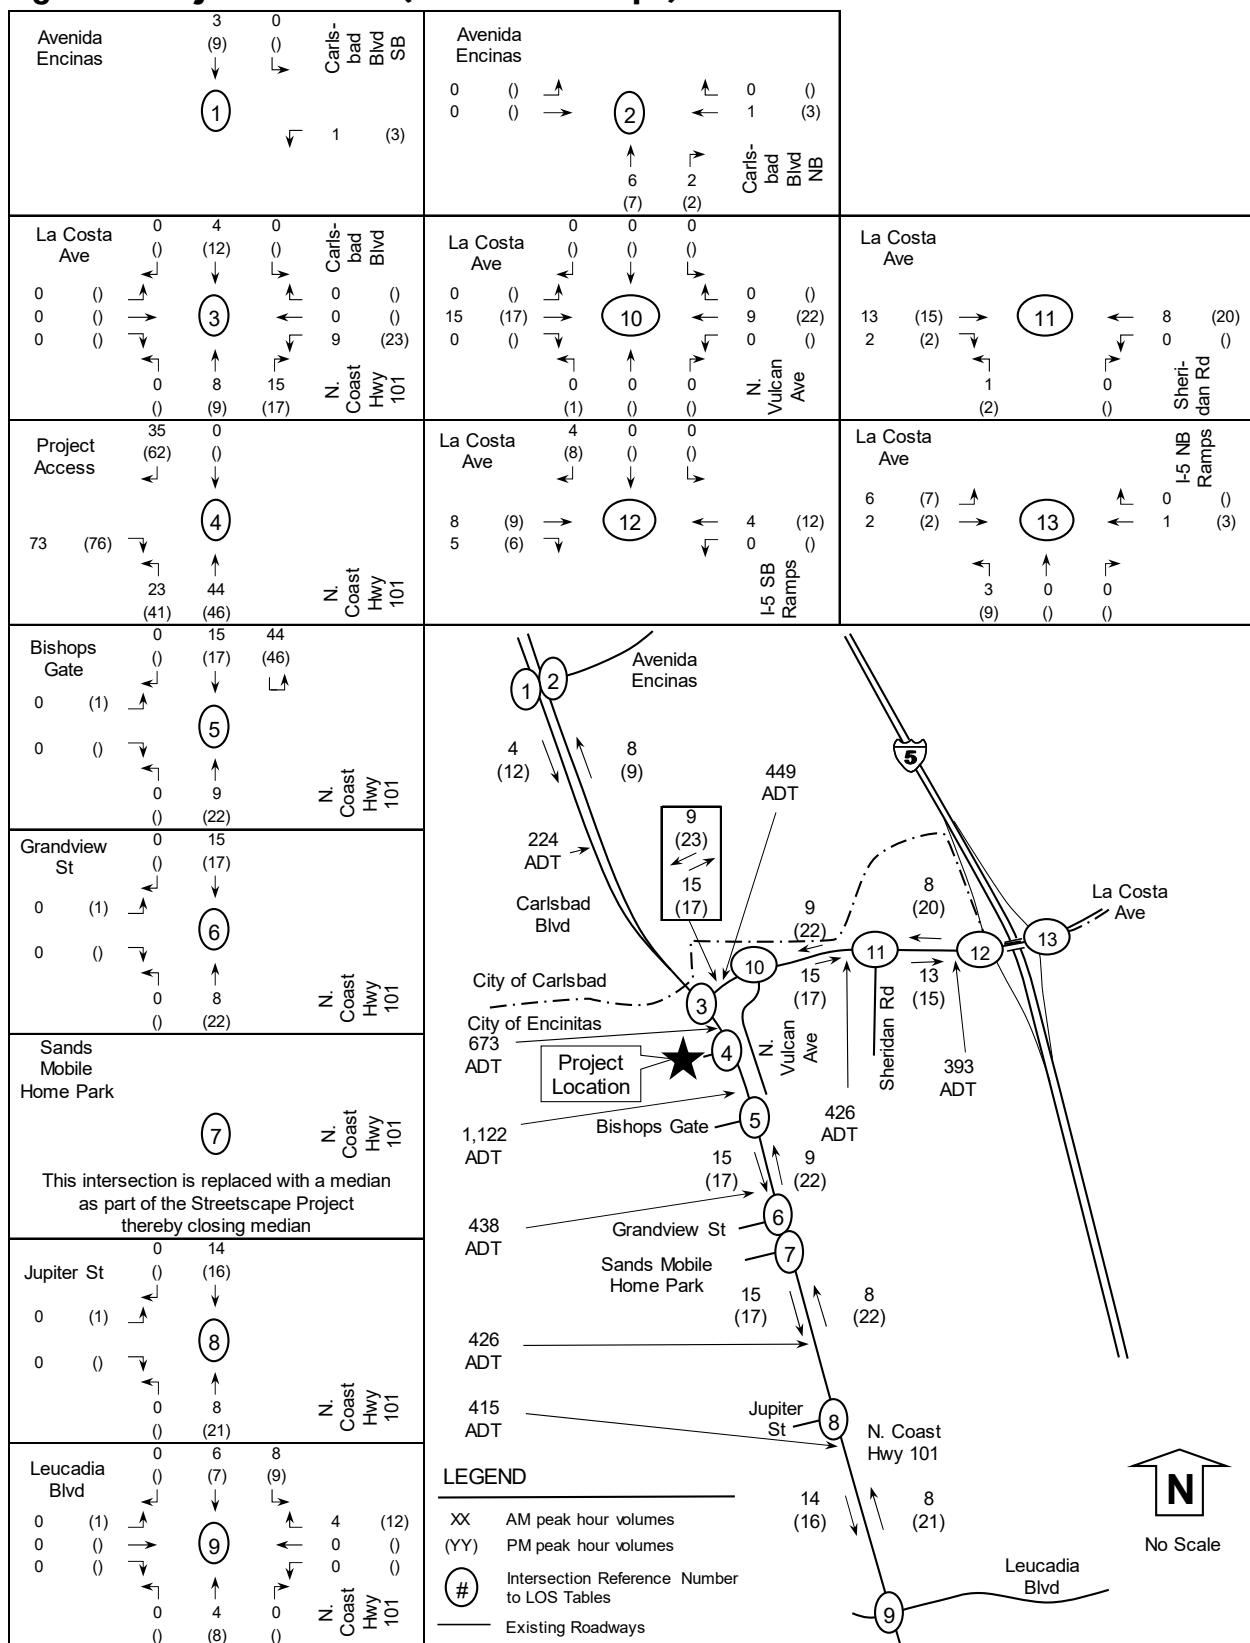

Figure 8: Project Volumes (After Streetscape)

5.0 Existing + Project Conditions

This scenario accounts for the addition of project traffic (using the before Streetscape distribution and assignment) onto existing volumes. The peak hour intersection volumes and daily traffic volumes are shown in **Figure 9**. The LOS calculated for the intersection is shown in **Table 11**. The daily capacity for the street segments is shown in **Table 13** with the segments hourly LOS shown **Tables 14**. Intersection LOS calculations are included in **Appendix K**.

Carlsbad Blvd capacity from Carlsbad 2018 Growth Management Program. Remaining capacities from Streetscape Final EIR.

Under existing plus project conditions, the study elements were calculated to operate at LOS D or better, except for (bold indicates project effect):

- 1) **Intersection of N. Coast Highway 101/Bishops Gate (LOS E AM),**
- 2) **Intersection of N. Coast Highway 101/Grandview St (LOS F AM),**
- 3) Intersection of N. Coast Highway 101/Jupiter St (LOS E AM),
- 4) Intersection of La Costa Ave/N. Vulcan Ave (LOS E AM), and
- 5) Segment of La Costa Ave from N. Vulcan to Sheridan (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations).

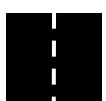

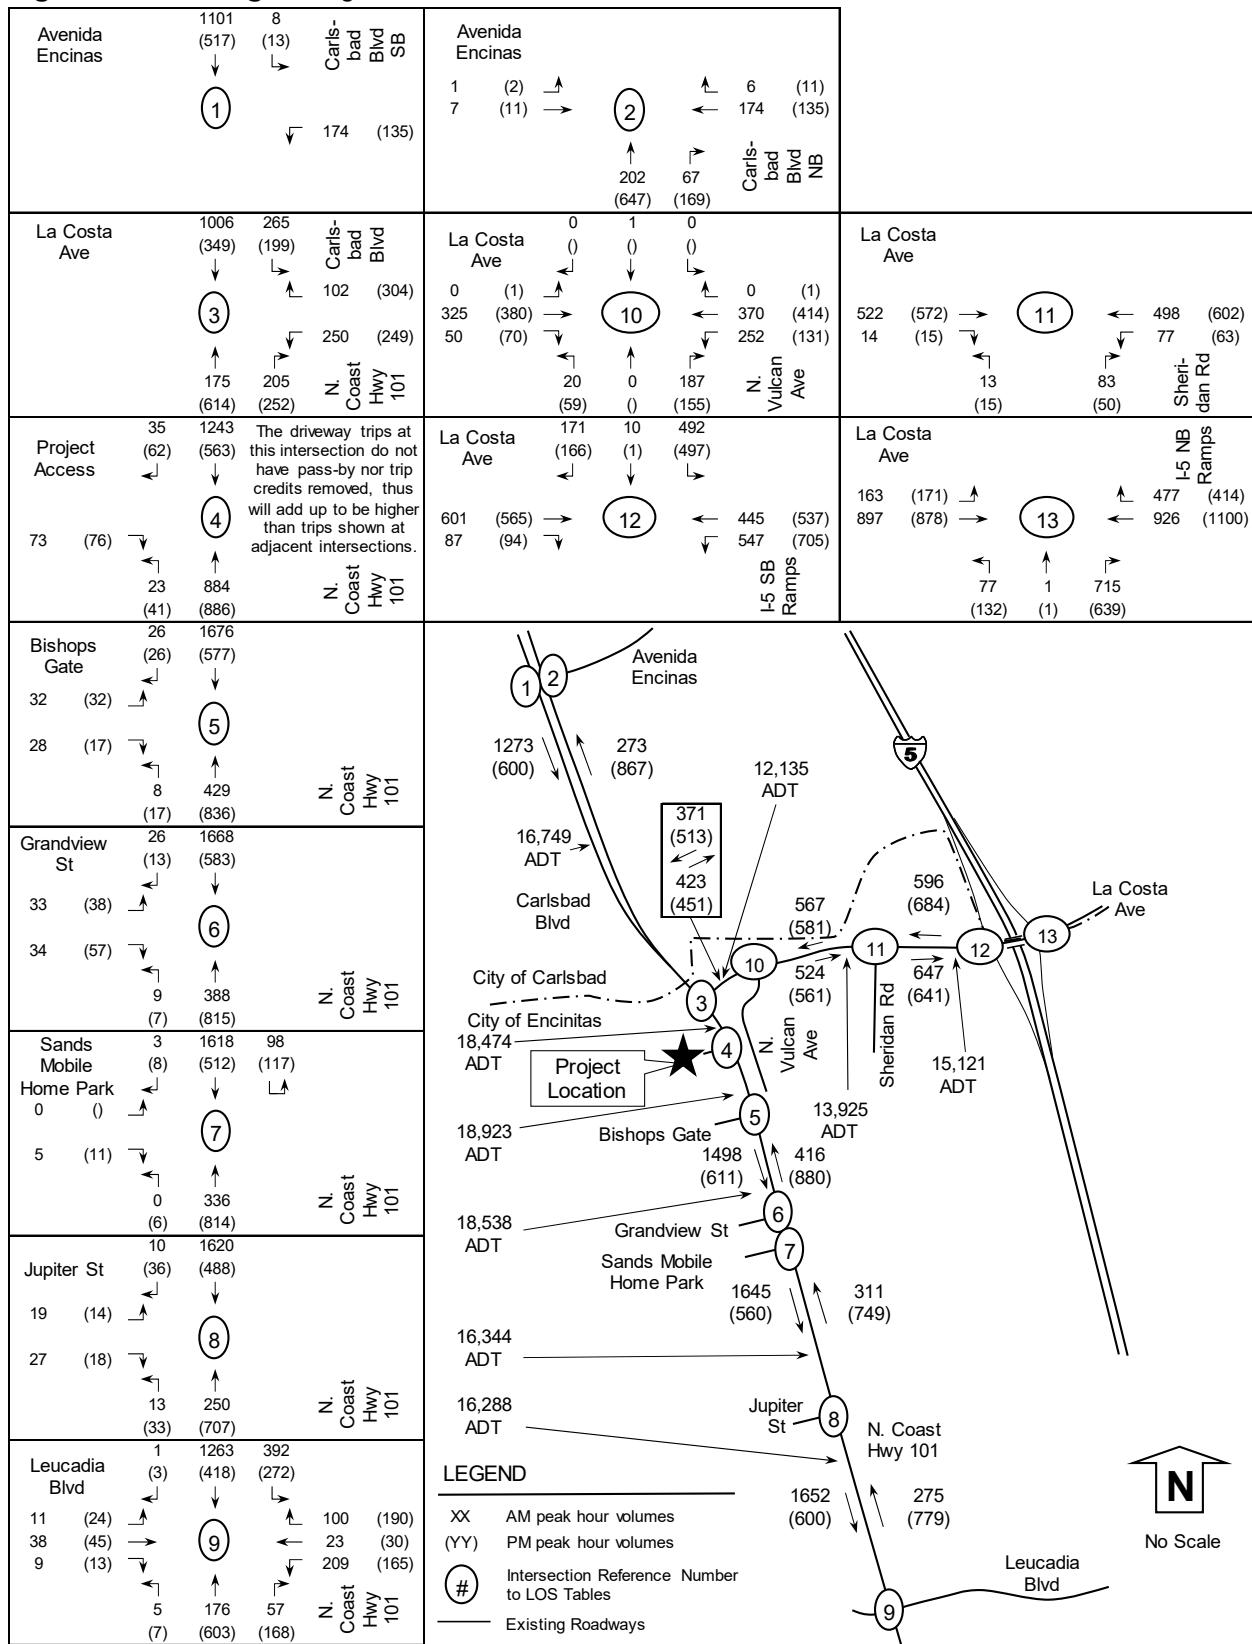

Figure 9: Existing + Project Volumes

6.0 Cumulative Projects

Based on a review of City of Encinitas on-line cumulative projects and coordination with Encinitas staff the following cumulative projects were determined to add sufficient traffic to the study area for analysis. Many cumulative projects on the City of Encinitas webpage are either too far away from the study area or their traffic would travel away from the study area; however, the following cumulative projects are anticipated to add traffic to the study area as noted below.

- 1) Encinitas Project Number 04-268 (Encinitas Beach Hotel at 2100 N. Coast Highway 101). A 130-room hotel calculated to generate 1,300 ADT with 78 AM and 104 PM peak hour trips.
- 2) Encinitas Project Number 13-187 (378 Fulvia St). A residential project with 9 dwelling units calculated to generate 78 ADT with 6 AM and 8 PM peak hour trips.
- 3) Encinitas Project Number 15-222 (Weston at 510 La Costa Ave). A residential project with 48 lots calculated to generate (with a credit for two existing homes) 460 ADT with 38 AM and 46 PM peak hour trip.
- 4) Encinitas Project Number 17-152 (1569 Lorraine Dr). A residential project with 1 dwelling unit calculated to generate 10 ADT with 1 AM and 1 PM peak hour trip.
- 5) Encinitas Project Number 17-197 (740 N. Coast Hwy 101). A mixed-use project with a net increase in traffic generation of 116 ADT with 16 AM and 16 PM peak hour trip.
- 6) Encinitas Project Number 17-280 (1251 N. Vulcan). A residential project with 9 dwelling units calculated to generate 90 ADT with 7 AM and 9 PM peak hour trips.
- 7) Encinitas Project Number 18-135 (Skyloft Rd). A senior housing project with 108 beds located across 18 separate structures (homes) calculated to generate 270 ADT with 10 AM and 22 PM peak hour trips.
- 8) Encinitas Project Number 18-188 (Hotel at 516 La Costa Ave). A 17-room hotel and restaurant calculated to generate 170 ADT with 11 AM and 14 PM peak hour trips.
- 9) Encinitas Project Number 18-220 (555 N. Vulcan Ave). A redevelopment project from an existing commercial business to 12 multi-family units resulting in a net reduction of overall trip generation, thus no new trips added to the study area.
- 10) Encinitas Housing Element Candidate Site AD08 (1967 N. Vulcan Ave). A redevelopment project from an existing commercial business to 72 multi-family units resulting in a trip generation increase of 372 ADT with 32 AM and 34 PM peak hour trips.

- 11) Carlsbad Project Number 2016-0002-MS (Ponto Beachfront in the vicinity of Carlsbad Blvd/Avenida Encinas) A mixed use project that includes 136 townhomes and 18,000 sf for retail and restaurants is calculated to have trip generation of 2,912 ADT with 187 AM and 258 PM peak hour trips.
- 12) Carlsbad Project Number GPA 2019-0004 (Newage Luxury Resort on the southeast corner of Avenida Encinas and Carlsbad Blvd). A resort hotel with 322 rooms calculated to have trip generation of 3,220 ADT with 193 AM and 258 PM peak hour trips.
- 13) Unknown and/or distant cumulative projects. Background peak hour volumes (ranging from single digits up to 35 peak hour trips depending on intersection location) were added to the study area to account for unknown and/or distant cumulative projects.

A summary of cumulative traffic generation is included in **Table 15**.

ADT-Average Daily Traffic; Split-percent inbound and outbound. Spreadsheet rounding may result in ± 1 to the above numbers.

There are several roadway changes as part of two cumulative projects. The intersection of N. Coast Highway 101 at La Costa Ave is currently being expanded to include a fourth (west leg) as part of cumulative project #04-268 (130-room hotel at 2100 N. Coast Highway 101). The City of Encinitas Streetscape Project includes roundabouts along N. Coast Highway 101 at Bishops Gate, at Grandview St, and at Jupiter St. The proposed changes to existing conditions by the cumulative projects are shown in **Figure 10** with details included in **Appendix L**.

The cumulative project traffic volumes are shown in **Figure 11** and the cumulative project traffic assignments are included in **Appendix M**.

Carlsbad Blvd capacity from Carlsbad 2018 Growth Management Program. Remaining capacities from Streetscape Final EIR.

Under existing plus cumulative conditions, the study elements were calculated to operate at LOS D or better, except for the:

- 1) Intersection of N. Coast Hwy 101/Bishops Gate (LOS E AM),
- 2) Intersection of N. Coast Hwy 101/Grandview St (LOS E AM),
- 3) Intersection of La Costa Ave/N. Vulcan Ave (LOS F AM & PM),
- 4) Segment of N. Coast Hwy 101 from La Costa Ave to 600' S. of La Costa Ave (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 5) Segment of N. Coast Hwy 101 from 600' S. of La Costa Ave to Bishops Gate (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 6) Segment of N. Coast Hwy 101 from Bishops Gate to Grandview St (LOS E daily; however,

- this segment operates at acceptable LOS under AM and PM peak hour operations),
- 7) Segment of N. Coast Hwy 101 from Grandview St. to Jupiter St. (LOS E SB AM),
 - 8) Segment of La Costa Ave from N. Coast Hwy to N. Vulcan Ave (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
 - 9) Segment of La Costa Ave from N. Vulcan Ave to Sheridan Rd (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations), and
 - 10) Segment of La Costa Ave from Sheridan Rd to I-5 (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations).

8.0 Existing + Cumulative + Project Conditions

This scenario accounts for the addition of project traffic (using the after Streetscape distribution and assignment) onto existing plus cumulative traffic with volumes shown in **Figure 13**. The intersection LOS are shown in **Table 19**. The segment daily capacity is shown in **Table 20** with the segment hourly LOS shown **Table 21**. Intersection LOS calculations are included in **Appendix O**.

Carlsbad Blvd capacity from Carlsbad 2018 Growth Management Program. Remaining capacities from Streetscape Final EIR.

Under existing plus cumulative plus project conditions, the study elements were calculated to operate at LOS D or better, except for (bold indicates project effect):

- 1) **Intersection of N. Coast Hwy 101/Bishops Gate (LOS E AM),**
- 2) Intersection of N. Coast Hwy 101/Grandview St (LOS E AM),
- 3) **Intersection of La Costa Ave/N. Vulcan Ave (LOS F AM & PM),**
- 4) Segment of N. Coast Hwy 101 from La Costa Ave to 600' S. of La Costa Ave (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 5) Segment of N. Coast Hwy 101 from 600' S. of La Costa Ave to Bishops Gate (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),

- 6) Segment of N. Coast Hwy 101 from Bishops Gate to Grandview St (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 7) Segment of N. Coast Hwy 101 from Grandview St. to Jupiter St. (LOS E SB AM),
- 8) Segment of La Costa Ave from N. Coast Hwy to N. Vulcan Ave (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 9) Segment of La Costa Ave from N. Vulcan Ave to Sheridan Rd (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations), and
- 10) Segment of La Costa Ave from Sheridan Rd to I-5 (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations).

9.0 Horizon Year 2035 Conditions

This scenario represents horizon year 2035 conditions. Year 2035 volumes were obtained from the *North Coast Highway 101 Leucadia Streetscape Improvement Project Final EIR*, dated February 2018 (“Streetscape EIR”). Excerpts from the Michael Baker International (MBI) traffic study prepared for the Streetscape EIR documenting the year 2035 volumes are included in Appendix D. Please note some of the Streetscape EIR volumes are lower than existing plus cumulative volumes and as such are calculated to operate better than near-term conditions. The intersections of Carlsbad Blvd/Avenida Encinas SB and Carlsbad Blvd/Avenida Encinas NB are located in Carlsbad and were not included in the Streetscape EIR; therefore, year 2030 volumes were obtained from the Ponto EIR and factored up 1% per year to represent year 2035 volumes. Horizon year volumes from the Ponto and Streetscape EIRs are included in **Appendix P**. The year 2035 network was based on Streetscape EIR as shown previously in Figure 10. The volumes are shown in **Figure 14**.

The intersection LOS are shown in **Table 22**. The segment daily capacity is shown in **Table 23** with the segment hourly LOS shown **Table 24**. For unsignalized intersections, the minor approach delay is shown if the minor leg is a public street and overall delay is shown if the minor approach is a private driveway such as the project driveway. Intersection LOS calculations are included in **Appendix Q**.

Carlsbad Blvd capacity from Carlsbad 2018 Growth Management Program. Remaining capacities from Streetscape Final EIR.

LOS Engineering, Inc.
Traffic and Transportation

Marea Village Mixed-Use N. Coast Hwy 101 Draft LTA

Under horizon year 2035 plus project conditions, the study elements were calculated to operate at LOS D or better, except for (bold indicates project effect):

- 1) Intersection of N. Coast Hwy 101/Bishops Gate (LOS E AM)
- 2) **Intersection of La Costa Ave/N. Vulcan Ave (LOS F AM & PM),**
- 3) **Intersection of La Costa Ave/Sheridan Rd (LOS F AM & LOS E PM),**
- 4) Segment of N. Coast Hwy 101 from La Costa Ave to 600' S. of La Costa Ave (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 5) Segment of N. Coast Hwy 101 from 600' S. of La Costa Ave to Bishops Gate (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 6) Segment of N. Coast Hwy 101 from Bishops Gate to Grandview St (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 7) Segment of La Costa Ave from N. Coast Hwy to N. Vulcan Ave (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 8) Segment of La Costa Ave from N. Vulcan Ave to Sheridan Rd (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations), and
- 9) Segment of La Costa Ave from Sheridan Rd to I-5 (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations).

11.0 Project Traffic Effects

The project is calculated to have a traffic effect to the following intersections because project traffic exceeds the allowable change in vehicular delays. The locations include:

- 1) Intersection of N. Coast Highway 101/Bishops Gate under existing + project, and existing + cumulative + project conditions.
- 2) Intersection of N. Coast Highway 101/Grandview St under existing + project conditions.
- 3) Intersection of La Costa Ave/N. Vulcan Ave under existing + project + cumulative, and horizon year 2035 + project conditions.
- 4) Intersection of La Costa Ave/Sheridan Rd under horizon year 2035 + project conditions.

11.1 Intersection of N. Coast Highway 101/Bishops Gate

This intersection is calculated to have a project effect under existing + project, and existing + cumulative + project conditions. A roundabout is proposed as part of the City's Streetscape Project; however, the roundabout is forecasted to operate at LOS E in the PM peak hour with project traffic. The AM peak hour is calculated to operate at acceptable LOS. The goal of Streetscape is to reduce the number of southbound vehicle lanes to accommodate a dedicated bike lane, reduce travel speeds, and implement roundabouts to better balanced mobility between motorists, bicyclists, and pedestrians.

If the project pulls building permits before Streetscape completes the roundabout, then the project will provide a **fair share contribution of 6.2%** towards this roundabout or other City direct location as the proportional means to reduce the traffic effect. The 6.2% is the higher percentage of project traffic between AM & PM peak hours as follows: AM 68 project peak hour trips divided by 2,092 existing peak hour trips = 3.3%; PM 86 project peak hour trips divided by 1,378 existing peak hour trips = 6.2% (controls).

11.2 Intersection of N. Coast Highway 101/Grandview Street

This intersection is calculated to have a project effect under existing + project conditions. A roundabout is proposed as part of the City's Streetscape Project. The roundabout is forecasted to operate at LOS E in the PM peak hour with project traffic; however, the project no longer has an effect because the change in delay is 0.6 seconds, which is less than the allowable 2.0 seconds as shown in **Table 28** (LOS calculations included in **Appendix S**). The AM peak hour is calculated to operate at acceptable LOS. The goal of Streetscape is to reduce the number of southbound vehicle lanes to accommodate a dedicated bike lane, reduce travel speeds, and implement roundabouts to better balanced mobility between motorists, bicyclists, and pedestrians.

If the project pulls building permits before Streetscape completes the roundabout, then the project will provide a **fair share contribution of 2.9%** towards this roundabout or other City directed location as the proportional means to reduce the traffic effect. The 2.9% is the higher percentage of project traffic between AM & PM peak hours as follows: AM 23 project peak hour

trips divided by 2,047 existing peak hour trips = 1.1%; PM 40 project peak hour trips divided by 1,381 existing peak hour trips = 2.9% (controls).

TABLE 28: N. COAST HIGHWAY 101/GRANDVIEW ST OPERATIONS WITH IMPROVEMENTS

Intersection and (Analysis) ¹	Approach	Peak Hour	Existing		Existing + Project			Effect ⁵
			Delay ²	LOS ³	Delay ²	LOS ³	Delta ⁴	
6) N. Coast Hwy at Grandview St (U)	EB	AM	61.0	F	70.1	F	9.1	Yes
<i>With Streetscape Planned Roundabout</i>								
6) N. Coast Hwy at Grandview St (R)	All	AM	35.0	D	35.6	E	0.6	No

Notes: 1) Intersection Analysis - (S) Signalized, (U) Unsignalized. 2) Delay - HCM Average Control Delay in sec. 3) LOS: Level of Service. 4) Delta is the increase in delay from project. 5) Project effect if threshold is exceeded.

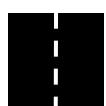

11.3 Intersection of La Costa Ave/N. Vulcan Avenue

This intersection is calculated to have a traffic effect under existing + project + cumulative, and horizon year 2035 + project conditions. The traffic effect is reduced to acceptable LOS with an improvement of a traffic signal under existing + project + cumulative conditions. Under horizon year 2035 + project conditions, in addition to a traffic signal an additional westbound left turn lane is required to have a forecasted acceptable LOS. Sufficient ROW may not exist for an additional left turn lane (for year 2034), thus City coordination and/or monitoring of traffic volumes may be required to determine if the forecasted volumes materialize to require a separate left turn lane. The California Manual on Traffic Control Devices (MUTCD) 2014 Revision 5 (effective 3/27/20) Warrant 2 (Four-Hour Vehicular Volume) is satisfied based on existing year 2020 volumes. The LOS without and with the traffic signal is shown in **Table 29**. The signal warrant calculations and LOS calculations are included in **Appendix T**.

TABLE 29: LA COSTA AVE/N. VULCAN AVE LOS WITH MITIGATION

Intersection and (Analysis) ¹	Approach	Peak Hour	Existing + Cumulative		Existing + Cumulative + Project			Effect ⁵
			Delay ²	LOS ³	Delay ²	LOS ³	Delta ⁴	
10) La Costa Ave at N Vulcan Ave (U)	NB	AM	58.4	F	60.9	F	2.5	Yes
	NB	PM	50.0	F	58.5	F	8.5	Yes
<i>With Improvement of a Traffic Signal</i>								
10) La Costa Ave at N Vulcan Ave (S)	All	AM			11.7	B		No
	All	PM			9.7	A		No
Intersection and (Analysis) ¹	Approach	Peak Hour	Horizon Year		Horizon Year 2035 + Project			Effect ⁵
			Delay ²	LOS ³	Delay ²	LOS ³	Delta ⁴	
10) La Costa Ave at N Vulcan Ave (U)	NB	AM	147.7	F	161.5	F	13.8	Yes
	NB	PM	121.5	F	142.7	F	21.2	Yes
<i>With Improvement of a Traffic Signal and additional WB left turn lane</i>								
10) La Costa Ave at N Vulcan Ave (S)	All				33.4	C		No
	All				20.8	C		No

Notes: 1) Intersection Analysis - (S) Signalized, (U) Unsignalized. 2) Delay - HCM Average Control Delay in sec. 3) LOS: Level of Service. 4) Delta is the increase in delay from project. 5) Project effect if threshold is exceeded.

Under Existing + Project + Cumulative conditions, the recommended improvement is a **fair share contribution of 2.7%** towards a future traffic signal as the proportional means to reduce the traffic effect. The 2.7% is the higher percentage of project traffic between AM & PM peak hours as follows: AM 24 project peak hour trips divided by 1,407 existing + cumulative peak hour trips = 1.7%; PM 40 project peak hour trips divided by 1,465 existing + cumulative peak hour trips = 2.7% (controls).

Under Horizon Year 2035 + Project conditions, the recommended improvement is a **fair share contribution of 2.3%** toward a horizon year intersection improvement that may be a westbound left turn lane or other to be determined improvement as the proportional means to reduce the traffic effect. The 2.3% is the higher percentage of project traffic between AM & PM peak hours as follows: AM 24 project peak hour trips divided by 1,871 horizon year peak hour trips = 1.3%; PM 40 project peak hour trips divided by 1,705 horizon year peak hour trips = 2.3% (controls).

11.4 Intersection of La Costa Ave/Sheridan Road

This intersection is calculated to have a traffic effect under horizon year 2035 + project conditions. The traffic effect is reduced to acceptable LOS with an improvement of a traffic signal. The California MUTCD 2014 Revision 5 (effective 3/27/20) Warrant 3 (Peak-Hour Vehicular Volume) is satisfied based on horizon year 2035 volumes. The LOS without and with the traffic signal is shown in **Table 30**. The signal warrant calculations and LOS calculations are included in **Appendix U**. It is recommended that the applicant coordinate with City staff to determine the appropriate proportional means to reduce the traffic effect.

TABLE 30: LA COSTA AVE/SHERIDAN RD LOS WITH MITIGATION

Intersection and (Analysis) ¹	Approach	Peak Hour	Horizon Year		Horizon Year 2035 + Project			
			Delay ²	LOS ³	Delay ²	LOS ³	Delta ⁴	Effect ⁵
11) La Costa Ave at Sheridan Rd (U)	NB	AM	61.2	F	69.7	F	8.5	Yes
	NB	PM	30.7	D	35.1	E	4.4	Yes
<u>With Improvement of a Traffic Signal</u>								
11) La Costa Ave at Sheridan Rd (S)	All	AM			7.2	A		No
	All	PM			5.8	A		No

Notes: 1) Intersection Analysis - (S) Signalized, (U) Unsignalized. 2) Delay - HCM Average Control Delay in sec. 3) LOS: Level of Service. 4) Delta is the increase in delay from project. 5) Project effect if threshold is exceeded.

Under Horizon Year 2035 + Project conditions, the recommended improvement is a **fair share contribution of 2.4%** toward a horizon year 2035 traffic signal or other City directed location as the proportional means to reduce the traffic effect. The 2.4% is the higher percentage of project traffic between AM & PM peak hours as follows: AM 24 project peak hour trips divided by 1,849 horizon year peak hour trips = 1.3%; PM 39 project peak hour trips divided by 1,611 horizon year peak hour trips = 2.4% (controls).

12.0 Conclusion

This analysis determined if there were any potential traffic effects on the study roadways from the addition of project traffic. The project includes a 30-room hotel, 94 multi-family units, and 18,261 square feet of commercial/retail space on the westside of North Coast Highway 101 approximately 500 feet south of La Costa Avenue located in the City of Encinitas, California. The project will replace an existing commercial/retail center of approximately 7,582 square feet with active businesses.

This analysis is based on the local San Diego Institute of Transportation Engineers (ITE) *Guidelines for Traffic Impact Studies in the San Diego Region* traffic analysis criteria. The project traffic generation was calculated using the SANDAG trip rates from the *Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002. The project site has active uses creating traffic; therefore, a traffic credit was applied because the existing uses will be replaced by the project. Additionally, the existing and proposed project have pass-by trips already on the study roadways. The project is calculated to generate a net increase of 1,122 ADT, 60 AM peak hour trips, and 102 PM peak hour trips.

Under existing conditions, the study elements were calculated to operate at LOS D or better, except for:

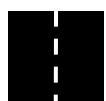

- 1) Intersection of N. Coast Highway 101/Bishops Gate (LOS E AM),
- 2) Intersection of N. Coast Highway 101/Grandview St (LOS F AM),
- 3) Intersection of N. Coast Highway 101/Jupiter St (LOS E AM),
- 4) Intersection of La Costa Ave/N. Vulcan Ave (LOS E AM), and
- 5) Segment of La Costa Ave from N. Vulcan to Sheridan (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hours operations).

Under existing plus project conditions, the study elements were calculated to operate at LOS D or better, except for (bold indicates project effect):

- 1) **Intersection of N. Coast Highway 101/Bishops Gate (LOS E AM),**
- 2) **Intersection of N. Coast Highway 101/Grandview St (LOS F AM),**
- 3) Intersection of N. Coast Highway 101/Jupiter St (LOS E AM),
- 4) Intersection of La Costa Ave/N. Vulcan Ave (LOS E AM), and
- 5) Segment of La Costa Ave from N. Vulcan to Sheridan (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations).

Under existing plus cumulative conditions, the study elements were calculated to operate at LOS D or better, except for the:

- 1) Intersection of N. Coast Hwy 101/Bishops Gate (LOS E AM),
- 2) Intersection of N. Coast Hwy 101/Grandview St (LOS E AM),
- 3) Intersection of La Costa Ave/N. Vulcan Ave (LOS F AM & PM),
- 4) Segment of N. Coast Hwy 101 from La Costa Ave to 600' S. of La Costa Ave (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 5) Segment of N. Coast Hwy 101 from 600' S. of La Costa Ave to Bishops Gate (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour

- operations),
- 6) Segment of N. Coast Hwy 101 from Bishops Gate to Grandview St (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
 - 7) Segment of N. Coast Hwy 101 from Grandview St. to Jupiter St. (LOS E SB AM),
 - 8) Segment of La Costa Ave from N. Coast Hwy to N. Vulcan Ave (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
 - 9) Segment of La Costa Ave from N. Vulcan Ave to Sheridan Rd (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations), and
 - 10) Segment of La Costa Ave from Sheridan Rd to I-5 (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations).

Under existing plus cumulative plus project conditions, the study elements were calculated to operate at LOS D or better, except for (bold represents project effect):

- 1) **Intersection of N. Coast Hwy 101/Bishops Gate (LOS E AM),**
- 2) Intersection of N. Coast Hwy 101/Grandview St (LOS E AM),
- 3) **Intersection of La Costa Ave/N. Vulcan Ave (LOS F AM & PM),**
- 4) Segment of N. Coast Hwy 101 from La Costa Ave to 600' S. of La Costa Ave (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 5) Segment of N. Coast Hwy 101 from 600' S. of La Costa Ave to Bishops Gate (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 6) Segment of N. Coast Hwy 101 from Bishops Gate to Grandview St (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 7) Segment of N. Coast Hwy 101 from Grandview St. to Jupiter St. (LOS E SB AM),
- 8) Segment of La Costa Ave from N. Coast Hwy to N. Vulcan Ave (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 9) Segment of La Costa Ave from N. Vulcan Ave to Sheridan Rd (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations), and
- 10) Segment of La Costa Ave from Sheridan Rd to I-5 (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations).

Under horizon year 2035 conditions, the study elements were calculated to operate at LOS D or better, except for:

- 1) Intersection of La Costa Ave/N. Vulcan Ave (LOS F AM & PM),
- 2) Intersection of La Costa Ave/Sheridan Rd (LOS F AM),
- 3) Segment of La Costa Ave from N. Coast Hwy to N. Vulcan Ave (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 4) Segment of La Costa Ave from N. Vulcan Ave to Sheridan Rd (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations), and
- 5) Segment of La Costa Ave from Sheridan Rd to I-5 (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations).

Under horizon year 2035 plus project conditions, the study elements were calculated to operate at LOS D or better, except for (bold indicates project effect):

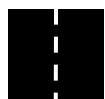

- 1) Intersection of N. Coast Hwy 101/Bishops Gate (LOS E AM)
- 2) **Intersection of La Costa Ave/N. Vulcan Ave (LOS F AM & PM),**
- 3) **Intersection of La Costa Ave/Sheridan Rd (LOS F AM & LOS E PM),**
- 4) Segment of N. Coast Hwy 101 from La Costa Ave to 600' S. of La Costa Ave (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 5) Segment of N. Coast Hwy 101 from 600' S. of La Costa Ave to Bishops Gate (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 6) Segment of N. Coast Hwy 101 from Bishops Gate to Grandview St (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 7) Segment of La Costa Ave from N. Coast Hwy to N. Vulcan Ave (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations),
- 8) Segment of La Costa Ave from N. Vulcan Ave to Sheridan Rd (LOS F daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations), and
- 9) Segment of La Costa Ave from Sheridan Rd to I-5 (LOS E daily; however, this segment operates at acceptable LOS under AM and PM peak hour operations).

The project is calculated to have an effect to the following intersections because project traffic exceeds the allowable change in vehicular delays. The locations include:

- 1) Intersection of N. Coast Highway 101/Bishops Gate under existing + project, and existing + cumulative + project conditions. A roundabout is proposed as part of the City's Streetscape Project; however, the roundabout is forecasted to operate at LOS E in the PM peak hour with project traffic. The AM peak hour is calculated to operate at acceptable LOS. The goal of Streetscape is to reduce the number of southbound vehicle lanes to accommodate a dedicated bike lane, reduce travel speeds, and implement roundabouts to better balanced mobility between motorists, bicyclists, and pedestrians. If the project pulls building permits before Streetscape completes the roundabout, then the project will provide a **fair share contribution of 6.2%** towards this roundabout or other City directed location as the proportional means to reduce the traffic effect.
- 2) Intersection of N. Coast Highway 101/Grandview St under existing + project conditions. A roundabout is proposed as part of the City's Streetscape Project. The roundabout is forecasted to operate at LOS E in the PM peak hour with project traffic; however, the project no longer has an effect with the roundabout because the change in delay is 0.6 seconds, which is less than the allowable 2.0 seconds. The AM peak hour is calculated to operate at acceptable LOS. The goal of Streetscape is to reduce the number of southbound vehicle lanes to accommodate a dedicated bike lane, reduce travel speeds, and implement roundabouts to better balanced mobility between motorists, bicyclists, and pedestrians. If the project pulls building permits before Streetscape completes the roundabout as the proportional means to reduce the traffic effect, then the project will provide a **fair share contribution of 2.9%** towards this roundabout or other City directed location.

- 3) Intersection of La Costa Ave/N. Vulcan Ave under existing + project + cumulative, and horizon year 2035 + project conditions. The traffic effect is reduced to acceptable LOS with an improvement of a traffic signal under existing + project + cumulative conditions. Under Existing + Project + Cumulative conditions, the recommended improvement is a **fair share contribution of 2.7%** towards a future traffic signal. Under horizon year 2035 + project conditions, in addition to a traffic signal an additional westbound left turn lane is required to have a forecasted acceptable LOS. Under Horizon Year 2035 + Project conditions, the recommended improvement is a **fair share contribution of 2.3%** toward a horizon year intersection improvement that may be a westbound left turn lane or other to be determined improvement as the proportional means to reduce the traffic effect.
- 4) Intersection of La Costa Ave/Sheridan Rd under horizon year 2035 + project conditions. The traffic effect is reduced to acceptable LOS with an improvement of a traffic signal. Under Horizon Year 2035 + Project conditions, the recommended improvement is a **fair share contribution of 2.4%** toward a horizon year 2035 traffic signal or other City directed location as the proportional means to reduce the traffic effect.

Notes:

Bold letter indicates substandard LOS E or F.

¹ Functional Classification is representative of existing segment functionality and does not take into consideration the ultimate or final classification.

² **3-Lane Major Roadway is 75% capacity of a 4-Lane Major Roadway.**

³ 3-Lane Collector is 75% capacity of a 4-Lane Collector.

⁴ 5-Lane Prime is 84% capacity of 6-Lane Prime Arterial (SANTEC).

⁵ 5-Lane Major is 84% capacity of 6-Lane Major Arterial (SANTEC).

⁶ 3-Lane Collector is 75% capacity of 4-Lane Collector (SANTEC).

Roadway Segment Analysis Methodology

To better evaluate the segment operations, peak hour directional segment analysis was conducted which evaluates the worst case condition. The capacity of the segment was determined by factoring the base saturation flow rate of 2,000 vehicles per hour per lane (VPHPL) to account for friction due to on-street parking and due to turning vehicles at minor side street intersections. For the existing roadway geometry conditions along Highway 101, a composite total of 30% flow rate reduction was assumed, in the southbound direction, with a reduction of 20% due to parking friction and 10% due to turning vehicle friction. In the northbound direction, a reduction of 10% was assumed due to turning vehicle friction at stop-controlled side streets. Along Highway 101, it was assumed that the reduction in roadway capacity for project alternatives will not be the same as that of the existing geometry. With the bike lanes proposed in the project design, a buffer is created between the travelling vehicles and vehicles either parking or turning. Therefore, for the project alternative scenarios in the southbound direction, the reduction in base saturation flow rate was adjusted by 10% for parking friction and 5% due to turning vehicles at stop-controlled side streets, for a combined total of 15%. In the northbound direction, a reduction of 5% was assumed due to turning vehicle friction. For La Costa Avenue a reduction of 10% was assumed due to turning vehicle friction in both directions and for all scenarios.

The peak hour directional volume of the segment was then divided by the adjusted capacity to determine the volume to capacity (v/c) ratio of the segment. This ratio was then compared to the LOS thresholds for segments defined in the SANTEC/ITE traffic study guideline to determine the LOS of the segment. The SANTEC/ITE LOS thresholds for segments is shown in Table 2 below:

Table 2
Segment Level of Service Thresholds Based on V/C Ratios

LOS	V/C Ratio
A	< 0.41
B	$0.42 - 0.62$
C	$0.63 - 0.79$
D	$0.80 - 0.92$
E	$0.93 - 1.00$
F	> 1.00

Appendix E

Excerpts from ITE Guidelines

GUIDELINES FOR TRANSPORTATION IMPACT STUDIES IN THE SAN DIEGO REGION

May 2019

7.0 ROADWAY

It is recommended that consideration be given to preparation of a local transportation analysis (LTA) for all land development and transportation projects. This section describes the recommended methodology for analysis of local roadway conditions.

The purpose of the roadway analysis portion of an LTA is to forecast, describe, and analyze how a development will affect existing and future circulation infrastructure for users of the roadway system, including vehicles, bicycles, pedestrians, and transit. The LTA assists transportation engineers and planners in both the development community and public agencies when making land use, mobility infrastructure, and other development decisions. An LTA quantifies the expected changes in transportation conditions and translates these changes into transportation system effects in the vicinity of a project.

The roadway transportation analysis included in an LTA is separate from the transportation impact analysis conducted as part of the environmental (CEQA) project review process, as described in Part I. The purpose of the roadway transportation analysis is to ensure that all projects provide a fair share of roadway infrastructure improvements in order to accommodate their multimodal transportation demands.

The following guidelines were prepared to assist local agencies throughout the San Diego Region in promoting consistency and uniformity in local transportation studies. These guidelines do not establish a legal standard for these functions but are intended to supplement any individual manuals or level of service objectives for the various jurisdictions. These guidelines attempt to consolidate regional efforts to identify when an LTA is needed, what professional procedures should be followed, and what constitutes a significant traffic effect that should be dealt with.

The instructions outlined in these guidelines are subject to update as future conditions and experience become available. Special situations may call for variation from these guidelines. It is recommended that consultants who prepare an LTA submit a scoping letter (methodology memo) for review by the lead agency to verify the application of these guidelines and to identify any analysis needed to address special circumstances. The scoping letter in this context is used for transportation analysis only and is not related to a formal scoping process that occurs with preparation of a CEQA study. Caltrans and lead agencies should agree on the specific methods used in local transportation analysis studies involving any State Route facilities, including metered and unmetered freeway ramps.

NEED FOR A STUDY

Figure 7-1 shows the flow chart for determination of when a roadway analysis should be conducted. A roadway analysis should be prepared for all projects which generate traffic greater than 1,000 total average daily driveway trips (ADT) or 100 peak-hour trips. If a proposed project is not in conformance with the land use and/or transportation element of the general or community plan, use threshold rates of 500 ADT or 50 peak-hour trips.

Early consultation with any affected jurisdictions is strongly encouraged since a “focused” or “abbreviated” roadway analysis may still be required – even if the above threshold rates are not met. An understanding of the level of detail and the assumptions required for the analysis should be reached. A pre-submittal in-person conference may not be required. However, the applicant should prepare a scoping letter for the agency’s review and approval prior to preparation of the analysis.

Table 7-1
DETERMINATION OF THE NEED FOR ROADWAY IMPROVEMENTS

LEVEL OF SERVICE WITH PROJECT*	ALLOWABLE CHANGE DUE TO PROJECT EFFECT**					
	FREEWAYS		ROADWAY SEGMENTS		INTERSECTIONS	RAMP*** METERING
	V/C	SPEED (MPH)	V/C	SPEED (MPH)	DELAY (SEC.)	DELAY(MIN.)
E, & F (OR RAMP METER DELAYS ABOVE 15 MIN.)	0.01	1	0.02	1	2	2

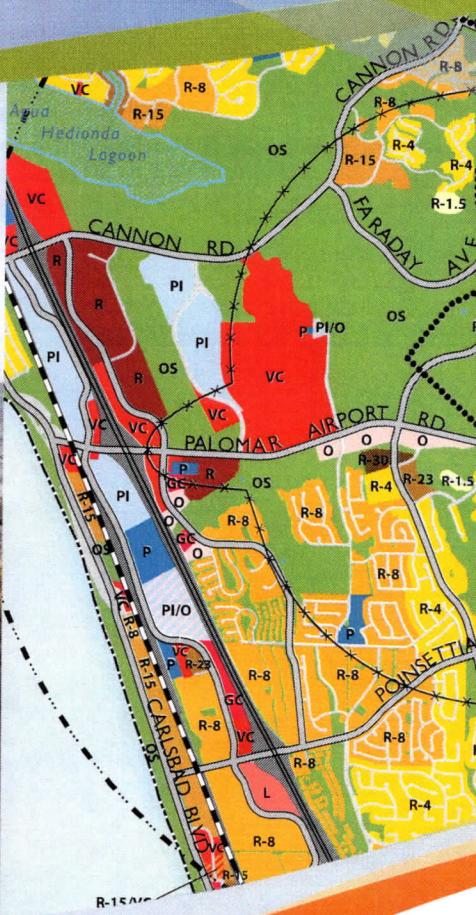

NOTES:

- * All level of service measurements are based upon Highway Capacity Manual (HCM) procedures for peak-hour conditions. However, V/C ratios for Roadway Segments may be estimated on an ADT/24-hour traffic volume basis (using Table 7-2 or a similar LOS chart for each jurisdiction). The target LOS for freeways, roadways, and intersections is generally "D." For metered freeway ramps, LOS does not apply; however, ramp meter delays above 15 minutes are considered excessive.
- ** If a proposed project's traffic causes the values shown in the table to be exceeded, the effects of the project are determined to justify improvements. These changes may be measured from appropriate computer programs or expanded manual spreadsheets. The project applicant shall then identify feasible improvements within the LTA report that will maintain the traffic facility at the target LOS or restore to pre-project conditions. If the LOS with the proposed project becomes worse than the target (see above * note), or if the project adds a significant amount of peak-hour trips to cause any traffic queues to exceed on- or off-ramp storage capacities, roadway improvements should be considered.
- *** See Attachment B for ramp metering analysis.

KEY:
 V/C = Volume to Capacity ratio
 Speed = Speed measured in miles per hour
 Delay = Average stopped delay per vehicle measured in seconds for intersections, or minutes for ramp meters
 LOS = Level of Service

(FHWA's MUTCD 2009 Edition, including Revisions 1 & 2, as amended for use in California)

Page 842

Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 2 of 5)

WARRANT 2 - Four Hour Vehicular Volume SATISFIED* YES NO

Record hourly vehicular volumes for any four hours of an average day.

APPROACH LANES	One More	Hour			
		2 or	1 AM	2 PM	3 PM
Both Approaches - Major Street	✓	934	1052	1067	1025
Higher Approach - Minor Street	✓	195	192	200	208

*All plotted points fall above the applicable curve in Figure 4C-1. (URBAN AREAS)

Yes No

OR, All plotted points fall above the applicable curve in Figure 4C-2. (RURAL AREAS)

Yes No

WARRANT 3 - Peak Hour SATISFIED YES NO (Part A or Part B must be satisfied)

PART A

(All parts 1, 2, and 3 below must be satisfied for the same one hour, for any four consecutive 15-minute periods)

1. The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one-lane approach, or five vehicle-hours for a two-lane approach; <u>AND</u>	Yes <input type="checkbox"/> No <input type="checkbox"/>
2. The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic or 150 vph for two moving lanes; <u>AND</u>	Yes <input type="checkbox"/> No <input type="checkbox"/>
3. The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more approaches or 650 vph for intersections with three approaches.	Yes <input type="checkbox"/> No <input type="checkbox"/>

PART B

SATISFIED YES NO

APPROACH LANES	One More	Hour			
		2 or	1 AM	2 PM	3 PM
Both Approaches - Major Street					
Higher Approach - Minor Street					

The plotted point falls above the applicable curve in Figure 4C-3. (URBAN AREAS)

Yes No

OR, The plotted point falls above the applicable curve in Figure 4C-4. (RURAL AREAS)

Yes No

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

LA COSTA AVE / SHERIDAN RD

YEAR 2035

Page 842 VOL.

California MUTCD 2014 Edition

(FHWA's MUTCD 2009 Edition, including Revisions 1 & 2, as amended for use in California)

Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 2 of 5)

WARRANT 2 - Four Hour Vehicular Volume

SATISFIED* YES NO

Record hourly vehicular volumes for any four hours of an average day.

APPROACH LANES	One	2 or More	Hour		
			1	2	3
Both Approaches - Major Street					
Higher Approach - Minor Street					

*All plotted points fall above the applicable curve in Figure 4C-1. (URBAN AREAS)

Yes No

OR, All plotted points fall above the applicable curve in Figure 4C-2. (RURAL AREAS)

Yes No

WARRANT 3 - Peak Hour

(Part A or Part B must be satisfied)

SATISFIED YES NO

PART A

SATISFIED YES NO

(All parts 1, 2, and 3 below must be satisfied for the same one hour, for any four consecutive 15-minute periods)

1. The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one-lane approach, or five vehicle-hours for a two-lane approach; AND	Yes <input type="checkbox"/> No <input type="checkbox"/>
2. The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic or 150 vph for two moving lanes; AND	Yes <input type="checkbox"/> No <input type="checkbox"/>
3. The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more approaches or 650 vph for intersections with three approaches.	Yes <input type="checkbox"/> No <input type="checkbox"/>

PART B

SATISFIED YES NO

APPROACH LANES	One	2 or More	Hour		
			1	2	3
Both Approaches - Major Street	✓		1745	AM	
Higher Approach - Minor Street	✓		104		

The plotted point falls above the applicable curve in Figure 4C-3. (URBAN AREAS)

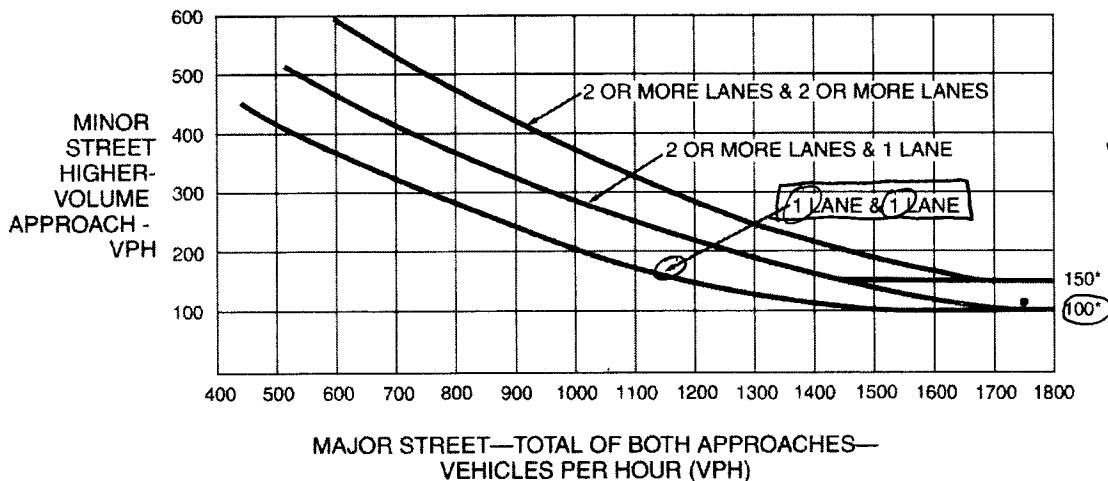

Yes No

OR, The plotted point falls above the applicable curve in Figure 4C-4. (RURAL AREAS)

Yes No

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

Figure 4C-3. Warrant 3, Peak Hour

Figure 4C-4. Warrant 3, Peak Hour (70% Factor)
(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 40 MPH ON MAJOR STREET)
