# AIR VACUUM & BLOW OFF REPLACEMENT PROJECT: PHASE 1

---

## WHAT IS IT?

The Project will replace air release and valves along Encinitas Blvd between El Camino Real and Rancho Santa Fe Road and along Rancho Santa Fe Road from Encinitas Blvd to El Camino del Norte. This critical infrastructure requires updating in order to continue providing reliable water service.

## HOW WILL IT IMPACT ME?

- Water service is not expected to be interrupted.
- Traffic delays may occur due to partial lane closures during the project, estimated between mid-March and the end of June.
- Some water may be released into the gutters and streets in order to maintain a safe working environment.

## WHAT IS AN AIR RELEASE VALVE?

Air can become trapped at high points in a pipeline system causing flow issues. Air release valves safely release the air trapped in the pipeline and minimize flow issues that may occur.

## WHAT IS A BLOW OFF VALVE?

Blow off valves allow for pipelines to be reliably drained for repair and maintenance.
