APPENDIX

CLIENT-PROVIDED INFORMATION FOR THE SITE

Site: 1190 Island View Land and 1220-1240 Melba Road, CA; Project No. G2438-62-02

***Please elaborate on any question answered “yes.” If the question does not apply to the site, please answer “N/A”.**

1. If possible, please provide us with the title, appraisal, or sale agreement records to review and discuss in the Phase I ESA.

Preliminary title report provided for all parcels. 2019 purchase agreement related to 1190 Island View provided. Melba parcels purchased by parents of current owners in 1950's.

2. Are you aware of any environmental liens or activity and use limitations associated with the Site?

No.

3. Do you have any specialized knowledge of the Site?

Limited.

4. Please provide any commonly known or reasonably ascertainable information about the Site.

Part of the 1190 Island View Lane parcel was used for agriculture. Part of the 1220-1240 Melba parcels was used for agriculture. The 1220-1240 Melba parcels have an ownership and use history that is independent from the 1190 Island View Lane parcel until 2019.

5. Who currently owns, manages, and operates the Site?

Torrey Pacific Corporation owns the site. Ashcraft Investment Company is the property manager for three rental homes located at 1220, 1230, and 1230a Melba.

6. Has the monetary value of the Site been reduced due to environmental issues associated with the Site or adjacent properties?

Not that I'm aware of.

7. Why are you requesting a Phase I ESA for the Site?

Preparing a single family home subdivision application.

Brian Staver

**PROPERTY BACKGROUND INFORMATION QUESTIONNAIRE FOR SITE
OWNER, OCCUPANT, OR REPRESENTATIVE**

Site: 1190 Island View Lane and 1220-1240 Melba Road, CA; Project No. G2438-62-02

***Please elaborate on any question answered “yes.” If the question does not apply to the site, please answer “N/A”.**

1) Describe the current uses of the Site.

Residential housing and vacant land.

2) How long has the Site been used for these purposes?

Several decades.

3) How long have you occupied the Site?

1190 Island View since 2019. 1220-1240 Melba since 1950’s.

4) List the existing structures on the property and their age.

1190 main house and nearby structures, ~1947;
1220 house, ~1938;
1230-1230a, ~1938;
1240 main house and nearby structures, ~1978.

5) Describe the past uses, owners, and operators of the Site. (Be as detailed as possible and note approximate time periods.)

Quezada family had owned 1190 Island View Lane for many decades. It is my understanding that they did some agriculture/ nursery work in the 1970’s and that they did not do any commercial agriculture for the past several decades. The Staver family has owned 1220-1240 Melba for many decades. Tom Staver did some agriculture/ nursery work in the 1980’s and 1990’s on 1234 Melba. 1220, 1230, 1230a, and 1240 have been used as residential housing since the 1950’s. 1240 Melba continues to be occupied by a member of the Staver family, as it has been since been for most of the time since initial purchase. 1220 – 1230a are currently occupied by renters unaffiliated with the ownership of the property.

6) Utilities including electricity, natural gas, water, sewer, and trash removal are provided to the Site by which utility/companies.

Water – San Dieguito Water District
Sewer – Cardiff Sanitary Division
Electricity – SDG&E
Natural Gas – SDG&E
Trash – EDCO.

7) What type of heating, ventilating, and air conditioning (HVAC) system is located at the Site and how is the HVAC system powered?

Powered by electricity or natural gas from SDG&E or wood fireplace.

8) Have the Site or adjoining properties been used for industrial activities, such the following? (Please note that an adjoining property is a property that is contiguous with, or directly across the street from the Site.)

Gasoline Station	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Printing Facility	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Metal Plating Manufacturing	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Landfill	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Motor Repair Facility	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Dry Cleaners	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Junkyard	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Waste Treatment	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Storage, Disposal, or Recycling Facility	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

Describe other industrial activities, if any.

9) Have any hazardous substances, petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or other waste materials been dumped aboveground, buried, or burned on the Site?

Yes No

10) Have any of the following items been stored on the Site in containers greater than 5 gallons?

Paint	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No – Not to my knowledge.
Chemicals	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No – Not to my knowledge; however, prior nursery use.
Pesticides	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No – Not to my knowledge; however, prior nursery use.

11) Are hazardous wastes generated at the Site? If yes, describe the means of disposal and frequency of disposal.

Yes No

12) Have petroleum products been stored on the Site or transferred across the Site in pipelines, either above or belowground?

Yes No

13) Has fill dirt been brought onto the Site from an offsite source?

Yes No

14) Is there evidence that the fill dirt in Question 13 may be contaminated?

Yes No – Not applicable.

15) Are there currently any pits, ponds, or lagoons on the Site?

Yes No

16) Have any pits, ponds, or lagoons previously existed on the Site?

Yes No

17) Are there currently areas on the Site with stained soil?

Yes No

18) Have stained soils previously existed on the Site?

Yes No – Not to my knowledge.

19) Do chemical-containing underground or aboveground storage tanks exist, or have they existed previously on the Site?

Yes No

20) Do fill pipes, vent pipes, or access ways indicating the presence of current or former underground storage tanks exist on the Site?

Yes No

21) Have fill pipes or vent pipes which may indicate the presence of a current or former underground storage tank been removed from the Site?

Yes No

22) Are floor drains stained with anything other than water in any area on the Site?

Yes No

23) Do floor drains on the Site emit foul odors?

Yes No

24) Is the Site served by a private well or a non-public water source?

Yes No

25) Are contaminants known to exist in any private well or non-public water system serving the Site?

Yes No

26) Does the Site discharge wastewater, other than domestic wastewater or storm water, into the sewer?

Yes No

27) Other than permission for domestic hookup, have any city, county, or local permits for wastewater discharge been issued to the Site?

Yes No

28) Does a septic tank exist, or has one existed previously on the Site?

Yes No – Not to my knowledge.

29) Do cesspools or cisterns currently exist on the Site?

Yes No

30) Have cesspools or cisterns previously existed on the Site?

Yes No

31) Other than storm water, does the Site discharge waste water onto the neighboring Site?

Yes No

32) Is there a transformer or capacitor that may contain PCBs on the Site?

Yes No

33) Is there hydraulic equipment such as automobile lifts or elevators on the Site?

Yes No

34) Are PCBs contained in hydraulic oil associated with hydraulic equipment located on the Site?

Yes No

35) Has an asbestos and/or lead-based paint survey been conducted at the Site? If so, what were the findings?

Yes No

36) Other than small quantities of legal pesticides used for landscape maintenance (e.g., Roundup), have pesticides, herbicides, or insecticides been applied on the Site?

Yes No In locations of prior nursery/ commercial agriculture use.

37) Are you aware of any environmental liens against the Site that are filed or recorded under federal, tribal, state, or local law?

Yes No

38) Have any environmental violations or citations associated with activities conducted on the Site been issued?

Yes No

39) Has the Site been included in other environmental assessments? If so, can copies of the reports be provided?

Yes No

40) Have other environmental assessments identified hazardous substances or petroleum products that exist, or may have existed on the Site?

Yes No – at non-inhabitable house structure.

41) Are there any pending lawsuits that involve the release or threatened release of hazardous substances associated with the Site?

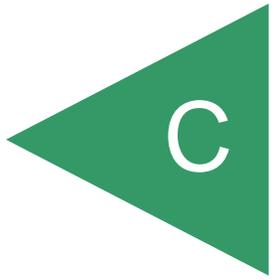

Yes No

42) Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions or institutional controls that are in place on the Site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Yes No

43) Are you aware of any commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of hazardous substance releases or threatened hazardous substance releases?

Subject: Phase I Environmental Site Assessment (Assessment) and Limited Soil Sampling (Sampling)

**Site: Assessor's Parcel Numbers (APNs) 259-181-02, -03, & -04
1190 Island View Lane
Encinitas, California 92024**

Dear Mr. Staver:

SCS Engineers (SCS) is pleased to present this report (Report) of the Assessment and Sampling of the above-described Site. This Report summarizes the results of the Assessment and Sampling that were conducted in order to evaluate the Site's current environmental conditions. The work described in this Report was performed by SCS in general accordance with Exhibit 03 to the Consulting Agreement between SCS and Torrey Pacific Corporation (Client). Exhibit 03 was fully executed on March 27, 2019. The Contract was fully executed on August 23, 2006.

Because your full understanding of the Assessment and Sampling is important to us, SCS recommends that you read the Report in its entirety. However, if time does not allow you a complete reading, summaries may be found in text boxes at the end of each section (pages 7, 13, and 18 and 19), and our conclusion and recommendation for the Assessment may be found on pages 19 through 21. Conclusions and recommendations for the Sampling can be found on pages 28 and 29. A glossary of terms commonly used in environmental assessments is also provided in the Appendices to this Report.

SCS enjoyed working with you on this project. Providing economical environmental solutions to meet your needs is more than our goal—it is our mission and the measure of our success. If we may assist you in any way, now or in the future, please call our office at (858) 571-5500.

Sincerely,

Tyler Overton

Résumés

1 BACKGROUND

Based on conversations with Torrey Pacific Corporation (Client) and a review of in-house databases, SCS Engineers (SCS) understands that 1190 Island View Lane consists of three parcels of land in Encinitas, California (Site) (Figure 1). The central portion of the Site is developed with a single-family residence that was constructed circa 1947, with the remaining portions of the Site consisting of vacant land. The Client is proposing to purchase and redevelop the Site into a residential development.

A review of the in-house ParcelQuest database of information from the San Diego County Assessor's Office provided the following information in connection with the Site.

APN	Address	Area	Description
259-181-02	Balour Drive	0.900 acres	Agricultural
259-181-03	1190 Island View Lane	0.940 acres	Residential Single Family
259-181-04	Balour Drive	0.800 acres	Agricultural

2 STANDARDS BACKGROUND- ASSESSMENT

This Assessment was conducted in general accordance with the following:

- U.S. Environmental Protection Agency (EPA), 40 Code of Federal Regulations (CFR) 312, Standards and Practices for All Appropriate Inquiries; Final Rule (AAI)
- American Society for Testing and Materials (ASTM) Standard Practice for Phase I Environmental Site Assessment Process E1527-13
- The scope, conditions, and limitations of Exhibit 03

The Client understands that the above-referenced EPA and ASTM standards were not developed to identify all environmental risk to property. The standards were developed to allow a user (Client) to qualify for the innocent purchaser defense, bona fide prospective purchaser defense, and contiguous property owner defense to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, a.k.a. Superfund) liability. This Assessment is intended to constitute an appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice, as part of the due diligence process required by CERCLA, the Superfund Amendments and Reauthorization Act of 1986, and the Small Business Liability Relief and Brownfields Revitalization Act of 2002 (collectively, Acts).

While this Assessment may initially qualify the Client for a CERCLA defense, after purchase, there may be continuing obligations that must be implemented in order to preserve this defense through the term of property ownership. There may be additional requirements under state law that also apply. The Client should contact qualified legal counsel regarding matters of liability,

interpretation of the Acts, and potential continuing obligations. Although it is outside the scope of this Assessment, SCS would be pleased to work with the Client's legal counsel to develop and implement a strategy to preserve the Client's CERCLA liability defenses through the term of its ownership.

This Assessment focused on potential sources of hazardous substances and petroleum products that could be considered either a recognized environmental condition,¹ controlled recognized environmental condition², or historical recognized environmental condition³, and potentially a liability due to their presence in significant concentrations (e.g., above acceptable limits set by the federal, state, or local government) or due to the potential for exposure and risk due to contaminant migration and complete exposure pathways (e.g., soil vapor inhalation or groundwater ingestion). Materials that contain substances that are not currently deemed hazardous by the EPA or the California Environmental Protection Agency were not considered as part of this Assessment.

Unless specifically included in SCS' scope of services, building materials such as asbestos, lead-based paint, urea formaldehyde, and pressure-treated lumber, as well as lead in drinking water, are not considered in this Assessment, nor are building issues such as fire safety, indoor air quality (with the possible exception of vapor intrusion), mold, or similar matters. SCS did not evaluate the Site for compliance with land use, zoning, wetlands, or similar laws. This Assessment also excludes regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and high-voltage power lines. This Assessment is not intended to be an environmental compliance audit.

Hazardous substances occurring naturally in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, and radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered, unless obvious indications suggest that hazardous substances are likely to be present in significant

¹ *Recognized environmental conditions*, as defined by ASTM, include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is not intended to include *de minimis* conditions (a condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered *de minimis* is not a recognized environmental condition.

² *Controlled recognized environmental condition*, as defined by ASTM, is a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).

³ *Historical recognized environmental condition*, as defined by ASTM, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

concentrations or likely to migrate. An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that included herein.

3 OBJECTIVE

The objective of the scope of services was to

- Assessment - Assess the likelihood⁴ that recognized environmental conditions are present at the Site as a result of the current or historical Site land use or from a known and reported off-Site source.
- Sampling - Assess the possible presence of constituents of concern (i.e., lead and organochlorine pesticides) associated with the potential use of lead-based paint, pesticides, and/or termiticides.

4 SCOPE OF SERVICES- ASSESSMENT

The scope of services designed and conducted to meet the objective was as follows:

- Site Reconnaissance, Site Research, Interviews, and User Requirements
- Topography, Geology, Hydrogeology, and Water Quality Survey
- Site Vicinity Reconnaissance and Off-Site Source Survey
- Historical Site and Site Vicinity Land Use Review
- Identification of Data Gaps
- Data Evaluation, Figure Preparation, and Assessment Report Preparation

SITE RECONNAISSANCE

On April 4, 2019, SCS personnel conducted a Site reconnaissance to observe and document existing Site conditions¹. The general Site location is shown in Figure 1, and a Site and Site Vicinity Plan is shown in Figure 2. Selected color photographs of the Site and Site vicinity are presented as Figures 3a through 3e. The Site grounds and Site perimeter were systematically traversed on foot during the Site reconnaissance. SCS personnel were unaccompanied during the Site reconnaissance and the interior of the Site building was unable to be observed.

General Information

The following table summarizes general information in connection with the Site.

⁴ Statements of *likelihood* are made in this Assessment, based on the professional judgment of SCS. A description of likelihood statements, as made in this Assessment, is included in the “Likelihood Statements” section.

APNs	259-181-02, -03, -04
Address	1190 Island View Lane, Encinitas, California
Area	2.64 acres
Site Land Use	Residential/agricultural
Occupant	Various residential tenants
Figure Reference	Figures 3a-1 through 3c-2

Site Building

The following table summarizes information in connection with the Site building.

Number of Buildings	One
Interpreted Construction Date	Circa 1947
Number of Stories	One
Construction Type	Wood frame and masonry-block constructed walls, concrete slab-on-grade foundation
Figure Reference	Figure 3c-1

The Site is developed with one single-family residence identified with the address of 1190 Island View Lane (Figure 3c-1). Interior access to the single-family residence was not available at the time of Site reconnaissance. The residence appeared to be vacant and was also in disrepair, with the roof of the residence observed to be in poor condition and covered with tarps in portions. No obvious features of environmental concern were observed around the exterior of the Site building.

Site Grounds

The Site grounds were observed to be unpaved vacant lots covered with grasses and weeds to the east and west of the single-family residence. Mature landscaping was observed adjacent to the single-family residence. An asphalt-paved driveway was observed along the southeastern portion of the Site providing access to the south side of the single-family residence, with chain-link metal fencing observed along the perimeter of the entire Site.

Hazardous Materials / Petroleum Products

No obvious indications of the storage or use of hazardous materials and/or petroleum products were observed at the Site during the Site reconnaissance.

Hazardous Wastes

No obvious indications of the generation of hazardous wastes were observed at the Site during the Site reconnaissance.

Indications of Releases of Hazardous Materials/Wastes or Petroleum Products

With the exception of minor surficial staining (interpreted to be from automotive lubricants) observed at various locations on the asphalt-paved parking area, no obvious indications were observed that a release of hazardous materials/wastes or petroleum products had occurred at the Site. The minor surficial releases identified above on paved surfaces are considered likely to be de minimis as defined by ASTM.

On-Site Utilities

Gas and Electricity	Reported to be San Diego Gas and Electric (SDG&E)
High-power Transmission Lines	None observed at or adjacent to the Site
Storm Drains	None observed to be located at the Site
Source of Heating and Cooling	Reported to be SDG&E
Potable Water Source	Reported to be supplied by the Olivenhain Municipal Water District
Wastewater Conveyance	Reported to be operated by the Encina Wastewater Authority

No obvious indications of wells, cisterns, pits, sumps, dry wells, or bulk storage tanks were observed at the Site.

SITE RESEARCH

Department of Environmental Health (DEH) File Review

A review of the September 2010 DEH HMMD HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases indicated that there is no regulatory file associated with the Site. In addition, the DEH was contactedⁱⁱ and indicated that there are no files associated with the Site.

Fire Department Records Review

The City of Encinitas Fire Department (EFD) was contacted regarding hazardous materials/waste or UST records for Siteⁱⁱⁱ. The EFD reported that they have no records for the Site. A copy of the EFD letter is included in the Appendices.

Building Department Records Review

The City of Encinitas Building Department (EBD) was contacted regarding building permits for the Site^{iv}. The EBD reported that they have no records for the Site. A copy of the EBD letter is included in the Appendices.

San Diego Air Pollution Control District (SDAPCD) Records Review

The SDAPCD was contacted^v regarding records for the Site. Ms. Cynthia Gould of the SDAPCD reported that they have no records for the Site. A copy of the APCD letter is included in the Appendices.

Encina Wastewater Authority (EWA) Records Review

The EWA was contacted^{vi} regarding records for the Site. According to the EWA, no records were available for the Site. A copy of the EWA letter is included in the Appendices.

Regional Water Quality Control Board (RWQCB) Records Review

The San Diego RWQCB was contacted^{vii} regarding records for the Site. According to the RWQCB, no records are maintained for the Site. A copy of the RWQCB letter is included in the Appendices.

County of San Diego Department of Agriculture, Weights and Measures

The County of San Diego Department of Agriculture, Weights and Measures was contacted^{viii} regarding records for the Site. According to the County of San Diego Department of Agriculture, Weights and Measures, no records are maintained for the Site. A copy of the correspondence is included in the Appendices.

Environmental Lien Search

Based on a review of grant deeds provided by National Environmental Title Search, no environmental liens or activity and use limitations (AULs) were found for the Site. Copies of the grant deeds are included in the Appendices.

INTERVIEWS

The previously referenced EPA and ASTM standards require that attempts be made to conduct interviews with past and present owners and occupants of the Site to obtain information indicating recognized environmental conditions in connection with the Site. At the time of this Report, past and present owners were not available to be interviewed. In addition, the residence was observed to be vacant at the time of Site reconnaissance; therefore, tenants of the Site were not available for interviews. This data gap is not a significant data gap in our opinion, based on the residential use of the Site and the availability of other relevant information.

USER REQUIREMENTS

In order to qualify for one of the landowner liability protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (discussed in the “Background” section), 40 CFR 312 requires that the user (Client) provide the following information to the environmental professional. Mr. Brian Staver, Authorized Agent with Torrey Pacific Corporation, completed the User Questionnaire on March 27, 2019. The following table summarizes the responses by the Client.

Question	Response
Have environmental cleanup liens been filed or recorded against the Site?	No
Are activity or land use limitations in place at the Site, or have they been filed or recorded in the registry?	No
Does the user have specialized knowledge or experience in connection with the Site?	Yes*
Does the purchase price being paid for the Site reasonably reflect the fair market value of the Site?	Yes**
Is the Client aware of commonly known or reasonably ascertainable information about the Site that would indicate releases or threatened releases?	Yes***
Are there obvious indications that point to the presence of contamination at the Site?	Yes****

* The Client stated that Torrey Pacific Corporation owns the adjacent parcel to the south of the Site, upon which agricultural activity has occurred.

** The Client stated that the Site has not yet been sold but is expected to sell for fair market value.

*** The Client stated that the Site was previously used for agricultural purposes.

****The Client stated that potential contamination may have occurred from previous agricultural uses.

Data Gaps in Connection With Current Site Land Use

Based on observations and research, and with the possible exceptions discussed below, there are no obvious indications of data gaps in connection with the current Site land use:

- Interview gaps, past and present owners and occupants of the Site were not available for interviews. This data gap is not a significant data gap in our opinion based on the residential land use at the Site and the availability of other relevant information.
- Access limitation. Access to the interior of the Site building was not available during the time of Site reconnaissance. This data gap is not a significant data gap in our opinion based on the residential land use at the Site and the availability of other relevant information.

Findings and Opinions—Current Site Land Use

Based on observations and research, it is our opinion that there are no recognized environmental conditions at the Site as a result of the current Site land use.

TOPOGRAPHY, GEOLOGY, HYDROGEOLOGY, AND WATER QUALITY SURVEY

Topography

A topographic map for the Site vicinity was reviewed and is summarized in the following table.

Reported Elevation	Approximately 390 to 400 feet above mean sea level
Reported Slope Direction	Western portion of the Site slopes gently down to the west, eastern portion of the Site slopes gently down to the east
Source	United States Geological Survey 7.5 Minute Topographic Map, Encinitas Quadrangle, California – San Diego County, 2018

Geology

A geological map for the Site vicinity was reviewed and is summarized in the following table.

Reported Formation	Tertiary sedimentary rocks (P) and (E)
Reported Description	(P) – Pliocene-aged marine sandstone, siltstone, shale, and conglomerate; mostly moderately consolidated. (E) – Eocene-aged marine shale, sandstone, conglomerate, and minor limestone; mostly well consolidated.
Source	State of California Department of Conservation's Geologic Map of California (2010) http://maps.conservation.ca.gov/cgs/gmc/

Hydrogeology

Data regarding depth to groundwater and flow direction for the Site were not readily available. In the absence of Site-specific data, depth to groundwater and flow direction information was reviewed for properties within the Site vicinity using the State Water Resources Control Board GeoTracker database. The following table summarizes the results of this review.

Property Location	Encinitas Village Cleaners, 127 North El Camino Real, Encinitas, California (approximately 2,200 feet to the northeast of the Site)
Reported Depth to Groundwater	28 to 32 feet below grade
Reported Groundwater Flow Direction	Southwest
Source	County of San Diego Department of Environmental Health Case Closure Summary for Encinitas Village Cleaners dated October 27, 1998

Many variables influence depth to groundwater and flow direction, and the actual depth to groundwater and flow direction at the Site may be different than presented in this section.

Water Quality Survey

The following table summarizes the reported water quality in the Site vicinity.

Reported Hydrologic Subarea	Batiquitos (904.51)
Reported Hydrologic Area	San Marcos (904.5)
Reported Hydrologic Unit	Carlsbad (904)
Reported Beneficial Use	Municipal, Agricultural, Industrial
Source	California RWQCB, San Diego Region, <i>Water Quality Control Plan for the San Diego Basin</i> , September 8, 1994, with amendments effective prior to April 25, 2007.

SITE VICINITY RECONNAISSANCE AND OFF-SITE SOURCE SURVEY

Current Site Vicinity Conditions

The following table summarizes land use and observations in the immediate Site vicinity^{ix}. For the purpose of this Report, the immediate Site vicinity includes those properties judged to be adjacent⁵ to the Site.

Direction	Land Use	Comments
North	Oak Crest Middle School (675 Balour Drive) (Figure 3d-1)	No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed.
East	Single-family residential (246 Witham Road and 844 Crest Drive) (Figure 3d-2)	
South	Horse stable (1210 Melba Road) (Figure 3e-1) Single-family residential and agricultural (1240 Melba Road) Single-family residential (1208 through 1226 Ahlrich Avenue)	
West	Single-family residential (1160 Island View Lane) (Figure 3e-2)	

5. *Adjacent* is defined by ASTM E1527-13 as any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.

Environmental Regulatory Database Report

An environmental regulatory database report (Radius Map™ report^x) was prepared by EDR for the Site. Local, state, and federal regulatory databases were reviewed for the Site and for those facilities within up to 1 mile of the Site. The Radius Map™ report was reported to have been prepared in general accordance with the ASTM standard for the regulatory database review for Phase I Environmental Site Assessments. The locations of the referenced facilities relative to the Site are shown on the overview maps, included in the Radius Map™ report. A description of the various databases, as well as the date each database was most recently updated, is included in the Radius Map™ report. The Radius Map™ report is included in the Appendices to this Report.

Based on a review of the Radius Map™ report, the following table summarizes the facilities within the selected search radii and whether the Site or a facility that was interpreted to be adjacent to the Site was listed on each database.

Federal or State Government Database	Search Radius	Number of Reported Facilities	On Site	Adjacent to the Site
National Priorities List (NPL)	1.00 mile	0	No	No
NPL Delisted	1.00 mile	0	No	No
Superfund Enterprise Management System (SEMS)	0.50 mile	0	No	No
No Further Remedial Action Planned (NFRAP)	0.50 mile	0	No	No
Resource Conservation and Recovery Act– Corrective Action (RCRA COR ACT)	1.00 mile	0	No	No
RCRA Treatment and Disposal Facilities (RCRA TSD)	0.50 mile	0	No	No
RCRA Generators (RCRA GEN)	0.25 mile	1	No	No
Federal Engineering and Institutional Controls (IC/EC)	0.50 mile	0	No	No
Emergency Response Notification System (ERNS)	0.12 mile	0	No	No
State/Tribal- Equivalent NPL	1.00 mile	0	No	No
State/Tribal-Equivalent CERCLIS (ENVIROSTOR)	1.00 mile	3	No	No
State/Tribal Solid Waste List (SWL)	0.50 mile	0	No	No
State/Tribal Leaking Underground Storage Tanks (San Diego County Site Assessment and Mitigation [SAM], LUST, Spills, Leaks, Investigation, and Cleanup [SLIC])	0.50 mile	27	No	No
State/Tribal Underground/Aboveground Storage Tanks (USTs/ASTs)	0.25 mile	0	No	No

Federal or State Government Database	Search Radius	Number of Reported Facilities	On Site	Adjacent to the Site
State/Tribal Voluntary Cleanup Program (VCP)	0.50 mile	0	No	No
Federal Brownfields	0.50 mile	0	No	No
Other Haz Sites (San Diego Hazardous Materials Management Division [HMMD])	Site only	0	No	N/A
Local Lists of Hazardous Waste/Contaminated Sites (San Diego HMMD)	Site only	0	No	N/A
Local Lists of Registered Storage Tanks (Statewide Environmental Evaluation and Planning System [SWEEPS UST], Historic UST, CA Facility Inventory Database [FID] UST)	0.25 mile	0	No	No
Local Land Records (DEED)	0.50 mile	0	No	No
Other (Historical Cortese)	0.50 mile	5	No	No
EDR High Risk Historical Records (Historic Auto, Historic Cleaner, Manufactured Gas Plant [MGP])	0.125 mile	0	No	No

N/A = Not applicable

The Site was not listed on any of the regulatory databases reviewed. However, regulatory records were reviewed for the Site, as discussed in the “Site Research” section above.

Off-Site facilities listed in the Radius Map™ report were evaluated as to their potential to impact the Site. The databases included in the Radius Map™ report can be grouped into two general categories: databases reporting unauthorized releases of hazardous substances or petroleum products (e.g., LUSTs, RCRA COR ACT facilities, National Priorities List [a.k.a. Superfund] sites) and databases reporting permitted hazardous materials users and hazardous waste generators for which a release has not been reported to, and recorded by, the regulatory agency.

SCS evaluated each of the off-Site facilities listed in the Radius Map™ report as to their potential to impact the Site, based on the following factors:

- Reported distance of the facility from the Site⁶
- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes
- Reported case type (e.g., soil only, failed UST test only)
- Reported substance released (e.g., chlorinated solvents, gasoline, metals)
- Reported regulatory agency status (e.g., case closed, “no further action”)
- Location of the facility with respect to the reported groundwater flow direction and depth to groundwater (discussed in the “Hydrogeology” section of this Report)

Based on one or more of the factors listed above, there is a low likelihood that the off-Site facilities listed in the Radius Map™ report represent a recognized environmental condition in connection with the Site.

EDR did not list any facilities as being “orphans,” which are facilities for which EDR does not have sufficient information to accurately locate them on a map.

California Division of Oil and Gas

SCS personnel reviewed the California Division of Oil and Gas Map regarding oil and gas well locations within 1 mile of the Site^{xi}. There were no wells interpreted to be located within a 1-mile radius of the Site.

Data Gaps in Connection With Off-Site Sources

Based on the Site vicinity reconnaissance and off-Site source survey, there are no obvious indications of data gaps in connection with off-Site sources.

⁶ Based on State Water Resources Control Board’s “Technical Justification for Groundwater Media-Specific Criteria,” (Groundwater Study) (April 2012), developed to support the State of California “Low Threat Closure Policy” (adopted May 2012), “plume length studies recognize that petroleum plumes stabilize in length due to natural attenuation.” The Groundwater Study goes on to cite Shih T., Y. Rong, T. Harmon, and M. Suffet, 2004, “Evaluation of the impact of fuel hydrocarbons and oxygenates on groundwater resources” (Environmental Science & Technology. Vol. 38, No. 1: 42-48) that a peer-reviewed study of plume lengths at 500 petroleum UST sites in the Los Angeles area is widely accepted as representative of plume lengths at California UST sites. Shih et al. reports methyl tertiary butyl ether (MTBE), with 90th percentile maximum plume lengths of 540 feet. Therefore, the detailed review radius for open groundwater cases has been conservatively established by SCS at 0.20 mile (approximately 1,000 feet). For non-release cases (e.g., permitted facilities), only those facilities that were judged to be immediately adjacent to the Site were interpreted to have the potential to represent a recognized environmental condition.

Findings and Opinions—Off-Site Source Survey

Based on the off-Site source survey, several facilities in the Site vicinity were reported to have had releases of hazardous materials/waste or petroleum products. However, it is our opinion that there are no recognized environmental conditions at the Site as a result of known and reported releases of hazardous materials/wastes or petroleum products from an off-Site source. This opinion is based on one or more of the following: reported regulatory status (e.g., case closed), media affected (e.g., soil contamination only), distance from the Site, direction from the Site with respect to reported groundwater flow direction, and information obtained through a review of County of San Diego Department of Environmental Health files.

HISTORICAL LAND USE REVIEW

In accordance with the ASTM Standard and AAI rule, numerous reasonably ascertainable standard historical information sources were reviewed, and an attempt was made to interpret the historical Site and Site vicinity land use back to the obvious first developed use of the Site. The following table summarizes the historical resources reviewed as part of this Assessment.

Resource	Source	Years Available
Aerial Photographs	NETR Online http://www.historicaerials.com/ Google Earth	1947, 1953, 1964, 1966, 1967, 1980, 1990, 1994, 1997, 2002, 2003, 2005, 2009, 2010, 2012, 2014
City Directories	San Diego Central Library	1971, 1976, 1981, 1986, 1991, 1996, 2001, 2006, 2011, 2016
Topographic Maps	NETR Online http://www.historicaerials.com/ United States Geologic Survey (USGS)	1893, 1897, 1901, 1907, 1911, 1920, 1925, 1931, 1939, 1947, 1949, 1955, 1963, 1969, 1971, 1978, 2001, 2012, 2015, 2018
Interviews	Not applicable	Discussed in the “Interviews” section above

Historical Site Land Use

The following table provides a chronology of the apparent historical Site land uses, as interpreted from a review of information from the sources referenced.

Year	Interpreted Site Tenants	Interpreted Site Use
1893 to 1939	None	Vacant
1947 to 1953	Various residential tenants	Single-family residential and agricultural (orchards)
1955 to 1967	Various residential tenants	Single-family residential and vacant land

Year	Interpreted Site Tenants	Interpreted Site Use
1971	Unknown	Land use not provided on topographic map reviewed
1978	Various residential tenants	Single family residential and vacant land
1980 to 1991	Various residential tenants	Single family residential and agricultural (green houses)
1994 to 2019	Various residential tenants	Single family residential and vacant land

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site uses listed above may have been earlier or later than indicated.

With the possible exceptions described below, no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed.

Historical Agricultural Land Use

Based on a review of historical aerial photographs, the Site and portions of the Site vicinity were interpreted to have been historically used for agricultural purposes, with use as an orchard at the Site from approximately 1947 to 1953, and with the Site improved with greenhouses from approximately 1980 to 1991. If the Site was used for agricultural land use, then there is a possibility that organochlorine and metal-based pesticides such as dichlorodiphenyltrichloroethane (DDT), arsenic, and others were used. These classes of pesticides are known to have the potential to remain in detectable concentrations in the subsurface for extended periods of time.

Based on our experience, there is a moderate likelihood that residual concentrations of organochlorine and metal-based pesticides are present in the shallow surface soil beneath the Site. Assuming the legal and permitted application of these pesticides, and assuming existing Site use remains the same (i.e., vacant and unoccupied), this common occurrence is, in our experience, unlikely to lead to a health risk or an enforcement action and is therefore likely to be considered *de minimis*, as defined by ASTM.

Based on our experience, if portions of the Site and Site vicinity were, in fact, used for agricultural purposes, there is a moderate likelihood that residual concentrations of organochlorine pesticides and metal-based pesticides are present in the shallow surface soil beneath the Site and Site vicinity.

SCS recommends that if the Site is ever occupied and/or developed, before any grading activities commence and/or before the Site is occupied, limited soil sampling for organochlorine pesticides and arsenic should be conducted at the Site and from the stockpiled soil located at the Site as a precautionary measure to ensure that future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of pesticides, if present. In addition, if soil

is to be excavated and exported as part of development activities, then the presence of pesticides and/or metals may result in the soil being considered regulated or hazardous waste and the soil may need to be properly characterized and disposed of at an appropriate receiving facility.

Limited soil sampling activities were conducted at the Site to assess the potential for residual concentrations of organochlorine pesticides and arsenic in the shallow soil within the vacant lots at Site, and are discussed in the Sampling section below.

Lead-Based Paint, Pesticides and Termiticides

The Site is interpreted to have been developed with a residential building from at least 1947 to present. Based on SCS's experience, there is a potential for the presence of elevated concentrations of lead in the shallow soil due to the potential former usage of lead-based paint at the Site, and/or detectable concentrations of organochlorine pesticides (OCPs) to be present in the soil due to the historical use of pesticides and/or termiticides.

Regarding the former potential usage of lead-based paint at the Site, based on SCS' experience with older structures that have historically used lead-based paint, there is the potential that shallow soils at the perimeter of the structures are impacted with lead from the accumulated weathering, scraping, flaking, and dissolution of lead based paints.

Regarding the potential presence of OCPs, based on our experience and a review of available literature, OCPs such as chlordane were commonly applied as termiticides around residential and commercial structures until approximately 1988. According to a study conducted on residential properties by the California Department of Toxic Substances Control (DTSC) in California, the most commonly detected OCPs in surface soil samples (0 to 0.5 foot below grade) at residential properties were chlordane, dichlorodiphenyltrichloroethane (DDT), dichlorodiphenyldichloroethylene (DDE), and dieldrin. These OCPs were found to exist at concentrations exceeding applicable health risk criteria, even at properties that were historically used solely for residential purposes (i.e., no historical agricultural, commercial, or industrial land use)^{xii}.

Residues from lead-based paint, as well as OCPs, are known to have the potential to remain detectable in the subsurface soil for extended periods of time. Based on the interpreted land use, SCS's experience with residential and commercial properties, and a review of the available literature, it is our judgment that it is likely that elevated concentrations of lead and/or trace concentrations of OCPs are present in the soil at the Site as a result of the potential historical usage of lead-based paint and/or termiticide and/or pesticide application.

If lead-based paint and/or pesticides or termiticides were historically applied at the Site, there is a low to moderate likelihood that residual concentrations of lead and OCPs are present in the shallow surface soil beneath the Site. The enforcement actions requiring the remediation of elevated concentrations of lead and/or OCPs at a property due to historical termiticide and/or pesticide application are typically driven by redevelopment, excavation, and/or soil export, as well as potential exposure concerns, if present.

Based on our experience, if elevated concentrations of lead, pesticides, or termiticides are present in soil, the likelihood of an enforced remediation is low as long as the soil remains undisturbed. The Site was observed to be comprised of vacant lots and a vacant residence; therefore, there is a low likelihood of open routes of exposure to these soils and a corresponding low likelihood of a recognized environmental condition.

However, it is SCS' understanding that the Site may be redeveloped in the future. If the soil at the Site is ever disturbed, excavated, or exposed in connection with future Site redevelopment, we recommend that limited soil sampling be conducted as a precautionary measure to ensure that future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of lead and/or OCPs, if present. In addition, if any soil at the Site will not be covered by hardscape or landscape, the soil should be assessed for lead and OCP concentrations to ensure there is no human health risk to future Site occupants.

Limited soil sampling activities were conducted at the Site to assess the potential for residual concentrations of OCPs and lead in the shallow soil adjacent to the current residence at Site, and are discussed in the Sampling section below.

Historical Site Vicinity Land Use

The following table provides a chronology of the apparent historical Site vicinity land uses as interpreted from a review of information from the sources referenced.

Years	Interpreted Site Vicinity Tenants	Interpreted Site Vicinity Use
675 Balour Drive (North)		
1893 to 1955	None	Undeveloped vacant land
1963	None	Land use not provided on topographic map reviewed
1964 to 2019	Oak Crest Middle School	Middle School
246 Witham Road and 844 Crest Drive (East)		
1893 to 1949	None	Undeveloped vacant land
1953	None	Vacant, cleared land
1955 to 1963	None	Land use not provided on topographic map reviewed
1964 to 2019	Various residential tenants	Single-family residential
1208 through 1226 Ahlrich Avenue (South)		
1893 to 1939	None	Undeveloped vacant land
1947 to 1963	None	Vacant, cleared land
1964 to 1967	None	Vacant, graded land

Years	Interpreted Site Vicinity Tenants	Interpreted Site Vicinity Use
1969	None	Land use not provided on topographic map reviewed
1971 to 2019	Various residential tenants	Single-family residential
1210 Melba Road (South)		
1893 to 1939	None	Undeveloped vacant land
1947 to 1955	None	Vacant, cleared land
1964 to 2019	Clyde Beamer/Seaview Farm	Horse farm and single-family residential
1240 Melba Road (South)		
1893 to 1939	None	Undeveloped vacant land
1947 to 1949	None	Vacant, cleared land
1953 to 1967	Various residential tenants	Single-family residential and orchard
1969 to 1978	Unknown	Land use not provided on topographic map reviewed
1980	Various residential tenants	Single-family residential
1990 to 2003	Various residential tenants	Single-family residential and orchard
2005 to 2019	Various residential tenants	Single-family residential
1160 Island View Lane (West)		
1893-1939	None	Vacant
1947	None	Orchard
1953 to 1955	None	Vacant, cleared land
1964 to 1967	None	Undeveloped vacant land
1969 to 1978	None	Land use not provided on topographic map reviewed
1980 to 2019	Various residential tenants	Single-family residential

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site vicinity uses/development described above may have been earlier or later than indicated.

With the possible exceptions described below, no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed.

A review of aerial photographs and topographic maps revealed that some type of agricultural activity took place within the Site vicinity between 1947 and 2003. Please see Historical Site Land Use section above for discussions in connection with the historical Site and Site vicinity land use for Agricultural purposes.

Data Gaps in Connection With the Historical Site Land Use

Readily available historical information was limited, and information was not available that would provide 5-year data intervals between the following years: 1901 to 1907, 1911 to 1920, 1925 to 1931, 1931 to 1939, 1939 to 1947, and 1955 to 1963. Based on the corroborating data from the historical information reviewed (i.e., the Site was interpreted to have been vacant or used for agricultural purposes in each of these years), SCS judged it likely that the historical Site land use during this time period was not significantly different from the interpretation presented in the table above.

Historical information prior to 1928 was not readily available. Thus, SCS is unable to determine the Site usage from the date of first development as recommended by ASTM. Based on SCS' experience and available historical information, the Site was interpreted to have possibly first been developed for agricultural use.

Findings and Opinions—Historical Site and Site Vicinity Land Use

Based on a review of historical resources and with the possible exceptions below, it is our opinion that there are no recognized environmental conditions at the Site as a result of a release of hazardous materials/wastes or petroleum products from a known or interpreted historical Site or Site vicinity land use.

Historical Site and Site Vicinity Agricultural Land Use

Based on a review of historical aerial photographs, the Site and portions of the Site vicinity were interpreted to have been historically used for agricultural purposes, with use as an orchard at the Site from approximately 1947 to 1953, and with the Site improved with greenhouses from approximately 1980 to 1991. If the Site was used for agricultural land use, then there is a possibility that organochlorine and metal-based pesticides such as dichlorodiphenyltrichloroethane (DDT), arsenic, and others were used. These classes of pesticides are known to have the potential to remain in detectable concentrations in the subsurface for extended periods of time.

Based on our experience, there is a moderate likelihood that residual concentrations of organochlorine and metal-based pesticides are present in the shallow surface soil beneath the Site. Assuming the legal and permitted application of these pesticides, and assuming existing Site use remains the same (i.e., vacant and un-occupied), this common occurrence is, in our experience, unlikely to lead to a health risk or an enforcement action and is therefore likely to be considered de minimis, as defined by American Society for Testing and Materials.

Based on our experience, if portions of the Site and Site vicinity were, in fact, used for agricultural purposes, there is a moderate likelihood that residual concentrations of

Findings and Opinions—Historical Site and Site Vicinity Land Use

organochlorine pesticides and metal-based pesticides are present in the shallow surface soil beneath the Site and Site vicinity.

SCS recommends that if the Site is ever occupied and/or developed, before any grading activities commence and/or before the Site is occupied, limited soil sampling for organochlorine pesticides and arsenic should be conducted at the Site and from the stockpiled soil located at the Site as a precautionary measure to ensure that future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of pesticides, if present. In addition, if soil is to be excavated and exported as part of development activities, then the presence of pesticides and/or metals may result in the soil being considered regulated or hazardous waste and the soil may need to be properly characterized and disposed of at an appropriate receiving facility.

Pesticides, Termiticides, and Lead-Based Paints

Based on the fact that the Site has been developed with a residential building as early as 1947, the potential exists for the presence of concentrations of lead and organochlorine pesticides (OCPs) to be present in the soil due to the historical potential use of lead-based paint, pesticides, and/or termiticides. SCS understands that the Site is currently developed with a building with hard scape and/or landscaping. Therefore, if termiticides, pesticides, and/or lead-based paint residues were present in the soil at the Site, there is a low likelihood of open routes of exposure to these soils and a corresponding low likelihood of a recognized environmental condition.

However, if redevelopment activities include extensive grading, soil excavation, or soil export, we recommend that limited soil sampling be conducted as a precautionary measure to ensure that future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of lead and/or OCPs, if present. In addition, if soil is to be excavated and exported as part of redevelopment activities, soil sampling should be conducted to assess whether the soil contains concentrations of lead and/or OCPs that would cause the soil to be classified as a hazardous or regulated waste.

Limited soil sampling activities were conducted at the Site to assess the potential for residual concentrations of OCPs, arsenic, and lead in the shallow soil within the vacant lots at the Site, and adjacent to the current residence at Site, and are discussed in the Sampling section below.

5 CONCLUSION AND RECOMMENDATION-ASSESSMENT

SCS has performed an Assessment of 1190 Island View Lane, Encinitas, California (Site), in general conformance with the ASTM Standard Practice for Phase I Environmental Site Assessment Process E 1527-13 and the EPA, 40 CFR 312, Standards and Practices for All Appropriate Inquiries, Final Rule (AAI). Any exceptions to, or deletions from, the ASTM and AAI Scope of Work were previously described in this Report where applicable.

With the possible exception below, this Assessment has revealed no evidence of a recognized environmental condition in connection with the Site.

Historical Site and Site Vicinity Agricultural Land Use

Based on a review of historical aerial photographs, the Site and portions of the Site vicinity were interpreted to have been historically used for agricultural purposes, with use as an orchard at the Site from approximately 1947 to 1953, and with the Site improved with greenhouses from approximately 1980 to 1991. If the Site was used for agricultural land use, then there is a possibility that organochlorine and metal-based pesticides such as dichlorodiphenyltrichloroethane (DDT), arsenic, and others were used. These classes of pesticides are known to have the potential to remain in detectable concentrations in the subsurface for extended periods of time.

Based on our experience, there is a moderate likelihood that residual concentrations of organochlorine and metal-based pesticides are present in the shallow surface soil beneath the Site. Assuming the legal and permitted application of these pesticides, and assuming existing Site use remains the same (i.e., vacant and un-occupied), this common occurrence is, in our experience, unlikely to lead to a health risk or an enforcement action and is therefore likely to be considered de minimis, as defined by American Society for Testing and Materials.

Based on our experience, if portions of the Site and Site vicinity were, in fact, used for agricultural purposes, there is a moderate likelihood that residual concentrations of organochlorine pesticides and metal-based pesticides are present in the shallow surface soil beneath the Site and Site vicinity.

SCS recommends that if the Site is ever occupied and/or developed, before any grading activities commence and/or before the Site is occupied, limited soil sampling for organochlorine pesticides and arsenic should be conducted at the Site and from the stockpiled soil located at the Site as a precautionary measure to ensure that future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of pesticides, if present. In addition, if soil is to be excavated and exported as part of development activities, then the presence of pesticides and/or metals may result in the soil being considered regulated or hazardous waste and the soil may need to be properly characterized and disposed of at an appropriate receiving facility.

Pesticides, Termiticides, and Lead-Based Paints

Based on the fact that the Site has been developed with a residential building as early as 1947, the potential exists for the presence of concentrations of lead and organochlorine pesticides (OCPs) to be present in the soil due to the historical potential use of lead-based paint, pesticides, and/or termiticides. SCS understands that the Site is currently developed with a building with hard scape and/or landscaping. Therefore, if termiticides, pesticides, and/or lead-based paint residues were present in the soil at the Site, there is a low likelihood of open routes of exposure to these soils and a corresponding low likelihood of a recognized environmental condition.

However, if redevelopment activities include extensive grading, soil excavation, or soil export, we recommend that limited soil sampling be conducted as a precautionary measure to ensure that

future occupants of Site buildings, construction workers, and others are not exposed to elevated concentrations of lead and/or OCPs, if present. In addition, if soil is to be excavated and exported as part of redevelopment activities, soil sampling should be conducted to assess whether the soil contains concentrations of lead and/or OCPs that would cause the soil to be classified as a hazardous or regulated waste.

Limited soil sampling activities were conducted at the Site to assess the potential for residual concentrations of OCPs, arsenic, and lead in the shallow soil within the vacant lots at the Site, and adjacent to the current residence at Site, and are discussed in the Sampling section below.

This Assessment has been conducted by an environmental professional whose qualifications⁷ were made known to the Client. The conclusion and recommendation presented above are based on the review of readily available data obtained as part of this Assessment, current regulatory guidelines, the Site and Site vicinity reconnaissance, and SCS' experience.

6 SCOPE OF SERVICES- LIMITED PHASE II SOIL SAMPLING (SAMPLING)

The Sampling activities described herein were conducted based on the recommendations made in the Assessment above regarding the possible presence of OCPs, arsenic, and/or elevated levels of lead at the Site in connection with the possible use of pesticides, termiticides, and/or lead-based paint within the currently vacant lots at the Site or on or around the current or former structures at the Site, and considering the proposed residential development at the Site.

PREPARATION FOR FIELDWORK

Preparation of Health and Safety Plan

A health and safety plan for work conducted at the Site and for workers within the "exclusion zone" is required pursuant to the regulations found in 29 Code of Federal Regulations Part 1910.120 and California Code of Regulations, Title 8, Section 5192. Therefore, a health and safety plan was prepared for the proposed work scope, which outlined the potential chemical and physical hazards that may be encountered during hand augering and sampling activities. The appropriate personal protective equipment and emergency response procedures for the anticipated Site-specific chemical and physical hazards were detailed in this plan. SCS personnel involved with the field work were required to read and sign this document in order to encourage proper health and safety practices.

7. SCS declares that, to the best of its professional knowledge and belief, the reviewer meets the definition of Environmental Professional as defined in section 312.10 of 40 CFR 312 and has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. SCS has developed and performed All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR 312. The qualifications of the report preparers are included in the Appendices.

Utility Search and Markout

SCS notified Underground Service Alert on May 13, 2019, as required by state law, prior to hand augering activities and was issued ticket number A191331369-00A. This procedure is designed to minimize the likelihood of drilling into a subsurface utility. The soil boring locations were adjusted as necessary to avoid conflicts with identified subsurface utilities.

FIELD ACTIVITIES - SOIL SAMPLING AND ANALYSIS

On May 21, 2019, SCS collected soil samples from representative areas of the Site at approximate depths of 0.5, 1.5, and 3 feet below ground surface (bgs) from six borings (B1 through B6) (Figure 4). The table below summarizes the information on sample identification numbers and depths in feet bgs for the Site.

Boring Number	Location	Sample Depths	Laboratory Analysis	Number of Samples Analyzed
B1	In the former agricultural area west of the on-Site residence	Soil samples were collected at depths of approximately 0.5, 1.5, and 3 feet below grade	0.5 – Lead, Arsenic and OCPs 1.5, 3 – Archive	1 Lead 1 Arsenic 1 OCPs
B2 and B3	In the immediate vicinity of the on-Site residence	Soil samples were collected at depths of approximately 0.5, 1.5, and 3 feet below grade	0.5 – Lead, Arsenic and OCPs 1.5, 3 – Archive (later analyzed for and OCPs)	2 Lead 2 Arsenic 6 OCPs
B4, B5, B6	In the former agricultural area east of the on-Site residence	Soil samples were collected at depths of approximately 0.5, 1.5, and 3 feet below grade	0.5 – Lead, Arsenic and OCPs 1.5, 3 – Archive	3 Lead 3 Arsenic 3 OCPs
TOTALS		Soil: 6 lead, 6 arsenic, 10 OCPs		

The soil borings were advanced by use of a hand-held auger. The soil samples were collected from the auger and placed into 4-ounce glass jars. The sample jars were capped, labeled, and placed in an ice-filled cooler for shipment to the laboratory. Chain-of-custody procedures were implemented for sample tracking.

Pursuant to SCS's standard operating procedures, the sampling equipment was decontaminated on Site between soil borings and soil samples to minimize the likelihood of cross-contaminating the samples and to minimize the potential for a false positive in the soil samples analyzed.

Soil samples were submitted to American Scientific Laboratories, LLC (ASL), a fixed-base, State-accredited laboratory. The samples collected from 0.5 foot bgs from each boring were analyzed for OCPs in general accordance with EPA Method 8081A and lead and arsenic in general accordance with EPA Method 6010. The deeper samples from 1.5 and 3 feet deep were archived by the lab pending the results of the shallow samples. Due to elevated concentrations of chlordane and/or dieldrin reported in 0.5 foot deep samples collected from borings B2 and B3, the deeper 1.5 and 3 foot deep samples from these borings were analyzed for OCPs.

7 SAMPLING - FINDINGS

A summary of the laboratory results for lead, arsenic, and OCPs from the soil samples analyzed is presented below, with the results compiled in Table 1. A complete listing of the results is presented in laboratory report included in the Appendices.

LEAD

Six soil samples were analyzed for lead by EPA Method 6010. The samples collected from 0.5 foot bgs from each boring location were analyzed. Lead was reported above laboratory reporting limits in each of the samples analyzed, with concentrations ranging from 3.65 (sample B4-0.5) to 16.6 mg/kg (sample B3-0.5).

Table 1 summarizes the detectable lead concentrations reported and compares them to the California Human Health Screening Levels (CHHSLs)^{xiii} as well as Regional Water Quality Control Board (RWQCB) Tier 1 Soil Screening Levels (SSLs)^{xiv} for waste (i.e., soil export).

None of the six samples analyzed for lead were reported to exceed the California Human Health Screening Level (CHHSL) of 80 mg/kg for lead, which is used to screen soil samples for potential health risk. One of the six samples, B3-05, analyzed for lead was reported to exceed the SSL for lead with a reported concentration of 16.6 mg/kg, which pertains to waste soil, or soil to be exported from the Site. Since soil export is proposed, waste-based criteria would apply, which is further discussed in the “Waste Based Criteria” section of this report below.

ARSENIC

Six soil samples were analyzed for arsenic by EPA Method 6010B. The samples collected from 0.5 feet bgs from each boring location were analyzed. Arsenic was reported above laboratory reporting limits in five of the six samples analyzed, with concentrations ranging from 0.337 mg/kg (sample B6-0.5) to 2.87 mg/kg (sample B2-0.5). Table 1 summarizes the detectable arsenic concentrations reported and compares them to the EPA Residential Screening Levels (RSL) for residential users^{xv}. Arsenic concentrations are reported to exceed the RSL of 0.68 mg/kg; however, the reported concentrations of arsenic at the Site are within typical background concentration ranges, as further discussed in the “Discussion” section below.

ORGANOCHLORINE PESTICIDES

Soil samples B1-0.5, B2-0.5, B2-1.5, B2-3, B3-0.5, B3-1.5, B3-3, B4-0.5, B5-0.5, and B6-0.5 collected at the Site were analyzed for OCPs in accordance with EPA Method 8081A. For constituents of concern (CoC), the EPA Regional Screening Levels (RSL) for residential users (April 2019)^{xvi} are typically used.

Three samples (B2-0.5, B2-1.5, B3-0.5) were reported with a concentrations of total chlordane greater than the Environmental Protection Agency (EPA) Regional Screening Level (RSL) and the California Department of Toxic and Substances Controls Screening Level (DTSC SL) of 1,700 micrograms per kilogram ($\mu\text{g}/\text{kg}$). Additionally, one sample, B2-1.5 was reported with a concentration of dieldrin of 39.7 $\mu\text{g}/\text{kg}$, which exceeds the RSL of 34 $\mu\text{g}/\text{kg}$.

8 DISCUSSION

RISK-BASED SCREENING CRITERIA

A guidance document titled *Regional Screening Levels (RSL) Summary Table* (April 2019) has been developed by the EPA to “provide default screening tables and a calculator to assist Remedial Project Managers (RPMs), On Scene Coordinators (OSCs), risk assessors, and others involved in decision making concerning CERCLA hazardous waste sites and to determine whether levels of contamination found at the site may warrant further investigation or site cleanup, or whether no further investigation or action may be required.” According to this document, “It should be emphasized that screening levels (SLs) are not cleanup standards. Site-specific information may warrant modifying the default parameters in the equations and calculating site-specific SLs, which may differ from the values in these tables.”

A guidance document regarding the use of CHHSLs (*Use of California Human Health Screening Levels [CHHSLs] in Evaluation of Contaminated Properties*) has been developed by the California Environmental Protection Agency. CHHSLs can be used to screen sites for potential human health concerns where releases of hazardous chemicals to soils have occurred. Under most circumstances, and within the limitations described in this document, the presence of a chemical in soil, soil gas, or indoor air at concentrations below the corresponding CHHSL can be assumed to not pose a significant health risk to people who may live (residential CHHSLs) at the site. The presence of a chemical at concentrations in excess of a CHHSL does not indicate that adverse impacts to human health are occurring or will occur but suggests that further evaluation of potential human health concerns is warranted.

SCS understands that the use of the RSLs is preferred when evaluating the health risk of a CoC, with the exception of lead, which uses the more conservative screening value, the CHHSL. Based on the proposed residential development, the discussion below uses the residential CHHSL as a screening value for lead (i.e., 80 mg/kg) and residential RSLs for other CoCs.

Metals

Lead

Lead was detected above the laboratory reporting limit in all six samples analyzed, with concentrations ranging from 3.65 (sample B4-0.5) to 16.6 mg/kg (sample B3-0.5). None of the samples were reported to exceed the CHHSL of 80 mg/kg, which is used for evaluating health risk. One of the six samples (B3-0.5) exceeded the SSL of 15 mg/kg, which indicates that soil represented by this sample may be considered a regulated waste if excavated and exported from the Site. Note; however, that statistics can be used to evaluate a waste stream, and a statistical analysis may indicate that the upper confidence interval for the lead data population is below the SSL.

Arsenic

In the soil samples that were analyzed for arsenic, arsenic concentrations were reported to range from 0.337 mg/kg to 2.87 mg/kg. Although the reported concentrations of arsenic exceed the

residential RSL of 0.68 mg/kg in three of the six samples, arsenic is commonly present in California soils at concentrations that exceed risk criteria under naturally-occurring conditions.

Based on a report prepared by the U.S. Geological Survey (USGS)⁸, the background concentrations of arsenic in the western United States range from 2.8 to 10.9 mg/kg. In another report prepared specifically for California soils⁹, the background concentrations of arsenic in California soil were found to range from 0.6 to 11.0 mg/kg. In an abstract presented by Department of Toxic Substances Control staff at the 2008 Society of Toxicology Annual Meeting¹⁰, it was reported that the upper-bound background concentration for arsenic in southern California soil is 12 mg/kg. While three of the six arsenic concentrations exceed the residential RSL, arsenic is commonly present in California soils. Given that the highest reported arsenic concentration is 2.87 mg/kg, the reported arsenic concentrations in shallow soil at the Site are within the range of typical background concentrations and do not appear to be indicative of a release of arsenic.

OCPs

Alpha- and Gamma-Chlordane and Chlordane

Alpha-chlordane was detected above the laboratory reporting limits in nine of the ten samples analyzed for OCPs, with a maximum reported concentration of alpha-chlordane of 1,600 µg/kg in sample B2-1.5. Gamma-chlordane was detected above the laboratory limits in nine of the ten samples analyzed for OCPs, with a maximum reported concentration of gamma-chlordane of 1,030 µg/kg in sample B3-0.5. Chlordane was reported in seven of the ten samples analyzed for OCPs, with a maximum concentration of 5,410 µg/kg in sample B2-1.5. There is not an RSL published for alpha- or gamma-chlordane; however, the RSL for chlordane is 1,700 µg/kg. Three reported chlordane concentrations are above the residential RSL for chlordane (B2-0.5 at 1,820 µg/kg, B2-1.5 at 5,410 µg/kg and B3-0.5 at 3,630 µg/kg). The reported exceedances of chlordane to the RSLs are further discussed in the “Mitigation” section below.

Dieldrin

Dieldrin was detected above the laboratory reporting limit in four of the ten samples analyzed for OCPs, with a maximum reported concentration of 39.7 µg/kg in sample B2-1.5, which exceeds the dieldrin residential RSL of 34 µg/kg. The reported exceedance of dieldrin to the RSL is further discussed in the “Mitigation” section below.

8 *Element Concentrations in Soils and Other Surficial Materials of the Conterminous United States*, by J. G. Boerngen and H. T. Shacklette, USGS Professional Paper No. 1270, 1984.

9 *Background Concentrations of Trace and Major Elements in California Soils*, by G. R. Bradford, et al., Kearny Foundation of Soil Science Division of Agriculture and Natural Resources University of California, March 1996.

10 *Determination of a Southern California Regional Background Arsenic Concentration in Soil*, Chernoff, G., Bosan, W., Oudiz, D., and California Department of Toxic Substances Control, 2008 Society of Toxicology Annual Meeting.

4,4'-Dichlorodiphenyldichloroethane (4,4'-DDD)

4,4'- DDD was detected above the laboratory limit in nine of the ten samples analyzed for OCPs with a maximum reported concentration of 487 µg/kg in sample B3-0.5. No sample concentrations were above the 4,4'-DDD residential RSL of 1,900 µg/kg.

4,4'-Dichlorodiphenyldichloroethylene (4,4'-DDE)

4,4'- DDE was detected above the laboratory limit in eight of the ten samples analyzed for OCPs with a maximum reported concentration of 297 µg/kg in sample B2-0.5. No sample concentrations were above the 4,4'-DDE residential RSL of 2,000 µg/kg.

4,4'-Dichlorodiphenyltrichloroethane (4,4'-DDT)

4,4'- DDT was detected above the laboratory limit in five of the ten samples analyzed for OCPs with a maximum reported concentration of 101 µg/kg in sample B3-1.5. No sample concentrations were above the 4,4'-DDT residential RSL of 1,900 µg/kg.

Heptachlor epoxide and Delta BHC

Heptachlor epoxide was detected above the laboratory limit in five of the ten samples analyzed for OCPs with a maximum reported concentration of 41.4 µg/kg in sample B2-1.5. No sample concentrations were above the residential RSL for heptachlor epoxide of 70 µg/kg.

Delta BHC was detected above the laboratory limit in four of the ten samples analyzed for OCPs with a maximum reported concentration of 74.3 µg/kg in sample B6-0.5. There are no published screening criteria for delta BHC.

WASTE-BASED CRITERIA

It has been SCS's experience that in order for soil to be classified as a regulated or hazardous waste, the soil would need first be considered a waste (e.g., to be excavated and transported off-Site). SCS understands that the Client intends to excavate and possibly export soil during redevelopment activities; therefore, waste criteria will be applicable if soil is exported off-Site, therefore a limited discussion of waste-based cleanup criteria is provided below.

Once it is determined that soil needs to be exported from a site and that soil contains elevated concentrations of toxic metals (i.e., above natural background concentrations) or potentially hazardous substances such as OCPs are reported above the laboratory reporting limits, the representative impacted soil to be exported will then be considered a waste. Once deemed a waste, it must be characterized. Soil not impacted by elevated concentrations of metals (i.e., generally above Tier 1 SSLs) or without detectable concentrations of OCPs or other CoCs besides metals above laboratory reporting limits will be considered suitable for unrestricted off-Site reuse (i.e., inert waste soil).

Lead

As discussed above, one soil sample was reported with a lead concentration that exceeds the SSL. Sample B3-0.5 was reported with a lead concentration of 16.6 mg/kg, which exceeds the SSL of 15 mg/kg, which indicates that soil represented by this sample may be considered a regulated waste if excavated and exported from the Site. Note; however, that statistics can be used to evaluate a waste stream, and a statistical analysis may indicate that the upper confidence interval for the lead data population is below the SSL.

Organochlorine Pesticides

The SSLs are detectable concentrations for OCPs or other CoCs besides metals. Since OCPs were reported above-laboratory reporting limits in all 10 soil samples, soil represented by these samples would be considered a regulated waste if exported from the Site, and should be disposed at an appropriately licensed facility.

MITIGATION

As discussed in the “Risk-Based Screening Criteria” section above, three soil samples (B2-0.5, B2-1.5, and B3-0.5) were reported with a chlordane concentrations that exceed the chlordane residential RSL of 1,700 µg/kg. In addition, one of these soil samples (B2-1.5) also exceeds the residential RSL for dieldrin of 34 µg/kg. In order to achieve acceptable levels of risk suitable for residential development that does not exceed health-risk screening levels (i.e., above EPA RSLs), OCP-bearing soil that exceeds RSLs should be removed through excavation and either on-Site reuse under a clean soil cap or via off-Site disposal at an appropriately licensed facility.

SCS understands that the proposed Site development plans include the construction of residential housing. Mitigation of the pesticide-bearing soil that exceeds health risk criteria (herein referred to as “pesticide-bearing soil”) is recommended prior to or during the proposed development by excavating and either:

- Properly segregating this material, and ultimately re-using/burying this material on-Site under a clean soil cap (e.g., beneath hardscape and not in utility corridors with at least 1 to 2 feet of clean fill over this material), or
- Exporting this material as a regulated waste to an appropriately-licensed facility.

Ideally, this could be conducted concurrently with on-Site grading (e.g., many sites required cut and then placement/compaction of soil for geotechnical reasons). Mitigation activities would eliminate exposure pathways to pesticide-bearing soil, which would result in health risks at the Site being acceptable for residential land use and development.

If the Client elects to bury or reuse the pesticide-bearing soil, SCS recommends that the Client consider “flipping” these soils by excavating this material, securely storing this material on-Site during redevelopment activities, and ultimately burying this material under at least 2 feet of clean fill in locations such as proposed hardscape areas (i.e., concrete or asphalt), or placed on-

Site in a manner to eliminate potential complete exposure pathways for future residential occupants.

In order to further assess the limits of pesticide-bearing soil at the Site, additional soil sampling and analysis for organochlorine pesticides is recommended. Although additional soil sampling would be required to verify the lateral and vertical extent of pesticides that exceed health risk criteria at the Site, based on our experience, and the known use of chlordane as a termiticide and applied to soil around the perimeter of structures for termite control, the likely extent of pesticide-bearing soil can be estimated to be confined to approximately 10 to 20 feet out from the perimeter of the residence. However, soil sampling is recommended to confirm this.

Note that there are cost advantages to re-using the pesticide-bearing soil on-Site; however, there may be disclosure requirements that may be necessary regarding the location and depth of the pesticide-bearing soil to lenders or future occupants or operators of the Site. If the Client is considering the possible reuse of pesticide-bearing soil on-Site, SCS recommends that the County of San Diego Department of Environmental Health (DEH) be contacted regarding their possible involvement.

9 CONCLUSIONS - SAMPLING

Based on the data obtained and reviewed as part of this Limited Phase II Soil Sampling, laboratory results, and current regulatory guidelines, and SCS's experience and professional judgment, SCS concludes:

- Six soil borings were advanced within representative unpaved areas at the Site to assess for the possible presence of constituents of concern (i.e., lead, arsenic and organochlorine pesticides [OCPs]) associated with the potential use of lead-based paint, pesticides, and/or termiticides.
- The results of the lead analysis of the shallow soil samples indicate that detectable concentrations of lead are present in the shallow soil in the soil samples collected at the Site. Six of the ten soil samples were reported with lead concentrations above laboratory limits, with concentrations ranging from 3.65 (sample B4-0.5) to 16.6 milligrams per kilogram (mg/kg) (sample B3-0.5). One soil sample (B3-0.5 at 16.6 mg/kg lead) reportedly exceeds the Regional Water Quality Control Board (RWQCB) Tier 1 Soil Screening Level (SSL) for lead of 15 mg/kg lead that applies to waste soil (i.e., soil that is exported from the Site), which indicates that soil represented by this sample may be considered a regulated waste if excavated and exported from the Site. Note; however, that statistics can be used to evaluate a waste stream, and a statistical analysis may indicate that the upper confidence interval for the lead data population is below the SSL.
- No lead concentrations exceeded the California Human Health Screening Level (CHHSL) for residential users of 80 mg/kg for lead, which is used to screen soil samples for potential health risk.
- Arsenic concentrations were reported to range from 0.337 milligrams per mg/kg to 2.87 mg/kg. While three of the six arsenic concentrations exceed the residential RSL of 0.68

mg/kg, arsenic is commonly present in California soils. Given that the highest reported arsenic concentration is 2.87 mg/kg, the reported arsenic concentrations in shallow soil at the Site are within the range of typical background concentrations and do not appear to be indicative of a release of arsenic.

- Chlordane was reported in seven of the ten samples analyzed for OCPs, with a maximum concentration of 5,410 micrograms per kilogram ($\mu\text{g}/\text{kg}$) in sample B2-1.5. The RSL for chlordane is 1,700 $\mu\text{g}/\text{kg}$. Three reported chlordane concentrations are above the residential RSL for chlordane (B2-0.5 at 1,820 $\mu\text{g}/\text{kg}$, B2-1.5 at 5,410 $\mu\text{g}/\text{kg}$ and B3-0.5 at 3,630 $\mu\text{g}/\text{kg}$).
- Dieldrin was detected above the laboratory reporting limit in four of the ten samples analyzed for OCPs, with one sample reported with a concentration of 39.7 $\mu\text{g}/\text{kg}$ dieldrin (sample B2-1.5) that exceeds the dieldrin residential RSL of 34 $\mu\text{g}/\text{kg}$.
- OCPs such as alpha and gamma chlordane, DDT, DDE, DDD were detected in various samples but were reported to be below residential RSLs.
- OCPs were detected in each of the 10 shallow soil samples collected from 0.5 feet deep at the Site. Soil with detectable concentrations of OCPs or other constituents of concern (CoCs) besides metals with concentrations above laboratory reporting limits are considered a regulated waste if excavated and exported from the Site. Therefore, if soil represented by these samples is exported from the Site, it should be disposed of at an appropriately licensed facility.

10 RECOMMENDATIONS - SAMPLING

Based on the data obtained and reviewed as part of this Sampling, laboratory results, current regulatory guidelines, and the conclusions presented above, SCS recommends the following:

- SCS understands that the proposed Site development plans include the construction of residential housing. Mitigation of the pesticide-bearing soil that exceeds health risk criteria (i.e., EPA RSLs) is recommended prior to or during the proposed development by excavating and either:
 - Properly segregating this material, and ultimately re-using/burying this material on-Site under a clean soil cap (e.g., beneath hardscape and not in utility corridors with at least 1 to 2 feet of clean fill over this material). Note that there may be disclosure requirements that may be necessary regarding the location and depth of the pesticide-bearing soil to lenders or future occupants or operators of the Site. Or;
 - Exporting this material as a regulated waste to an appropriately-licensed facility.
- Additional soil sampling is recommended to further delineate the extent of pesticide-bearing soil that exceeds health risk criteria.

11 REPORT USAGE AND FUTURE SITE CONDITIONS

This Report is intended for the sole usage of the Client and other parties designated by SCS. The methodology used during this Assessment was in general conformance with the requirements of the Client and the specifications and limitations presented in the Consulting Agreement (Contract) between the Client and SCS. This Report contains information from a variety of public and other sources, and SCS makes no representation or warranty about the accuracy, reliability, suitability, or completeness of the information. Any use of this Report, whether by the Client or by a third party, shall be subject to the provisions of the Contract between the Client and SCS. Any misuse of or reliance upon the Report shall be without risk or liability to SCS.

Assessments are qualitative, not comprehensive, in nature and may not identify all environmental problems or eliminate all risk. For every property, but especially for properties in older downtown or urban areas, it is possible for there to be unknown, unreported recognized environmental conditions, USTs, or other features of concern that might become apparent through demolition, construction, or excavation activities, etc. In addition, the scope of services for this project was limited to those items specifically named in the scope of services for this Report. Environmental issues not specifically addressed in the scope of services for this project are not included in this Report.

Land use, condition of the properties within the Site, and other factors may change over time. The information and conclusions of this Report are judged to have been relevant at the time the work described in this Report was conducted. This Report should not be relied upon to represent future Site conditions unless a qualified consultant familiar with the practice of Phase I Environmental Site Assessments in the County of San Diego is consulted to assess the necessity of updating this Report.

The property owners at the Site are solely responsible for notifying all governmental agencies and the public of the existence, release, or disposal of any hazardous materials/wastes or petroleum products at the Site, whether before, during, or after the performance of SCS' services. SCS assumes no responsibility or liability for any claim, loss of property value, damage, or injury that results from hazardous materials/wastes or petroleum products being present or encountered within the Site.

Although this Assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection for reasons that include, but are not limited to, (1) inadequate or inaccurate information rightfully provided to SCS by third parties, such as public agencies and other outside sources; (2) the limited scope of this Assessment; and (3) the presence of undetected, unknown, or unreported environmental releases.

12 LIKELIHOOD STATEMENTS

Statements of “likelihood” have been made in this report. Likelihood statements are based on professional judgments of SCS. The term “likelihood,” as used herein, pertains to the probability of a match between the prediction for an event and its actual occurrence. The likelihood statement assigns a measure for a “degree of belief” for the match between the prediction for the event and the actual occurrence of the event.

The likelihood statements in this Report are made qualitatively (expressed in words). The qualitative terms can be approximately related to quantitative percentages. The term “low likelihood” is used by SCS to approximate a range of 10 to 20 percent; the term “moderate likelihood” refers to an approximate range of 40 to 60 percent; and the term “high likelihood” refers to an approximate range of 80 to 90 percent.

13 SPECIAL CONTRACTUAL CONDITIONS BETWEEN USER AND ENVIRONMENTAL PROFESSIONAL

There were no special contractual conditions between the user of this Assessment, the environmental professional, and SCS.

Soil samples, with depth in feet below grade, analyzed for lead by EPA Method 6010B and organochlorine pesticides (OCPs) by EPA Method 8081A. Results metals for reported in milligrams per kilogram (mg/kg). Results for OCPs reported in micrograms per kilogram (µg/kg). **Bold** font indicates sample results above the laboratory reporting limit. **Red** font indicates sample results above the screening criteria. < indicates results less than the laboratory reporting limit; number indicates individual analyte reporting limit. ND indicates concentration not detected above laboratory reporting limits. NA indicates sample not analyzed.

Disclaimer: This figure is based on available data. Actual conditions may differ. All locations and dimensions are approximate.

APPENDICES

GLOSSARY

- adjacent property.** Any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.
- aerial photographs.** Photographs taken from an airplane or helicopter of areas encompassing the Site.
- asbestos.** Six naturally occurring fibrous minerals found in certain types of rock formations. Of the six, the minerals chrysotile, amosite, and crocidolite have been the most commonly used in building products. When inhaled in sufficient quantities, asbestos fibers can cause serious health problems.
- asbestos-containing material (ACM).** Any material or product that contains more than 1% asbestos.
- construction debris.** Any concrete, brick, asphalt, and other building materials discarded in the construction of a building or other improvement to property.
- Controlled recognized environmental conditions.** A *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).
- de minimis condition.** A condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered *de minimis* is not a *recognized environmental condition*.
- drum.** A container (typically, but not necessarily, holding 55 gallons of liquid) that may be used to store hazardous substances or petroleum products.
- dry well.** Underground areas where soil has been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (spilled intentionally or not), and for wastewater disposal (often illegal).
- fill dirt.** Dirt, soil, sand, or other earth that is obtained off site and that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real property. It does not include material that is used in limited quantities for normal landscaping activities.
- fire insurance map.** Maps produced for private fire insurance map companies that indicate uses of properties at specified dates and that encompass the property.
- hazardous material.** Any material that, because of its quantity, concentration, or physical and chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. Hazardous materials include, but are not limited to, hazardous substances, hazardous waste, and any material which a handler or the administering agency has a reasonable basis for believing would be injurious to the health or safety of persons or harmful to the environment if released into the workplace or the environment.
- hazardous substance.** Pursuant to CERCLA, hazardous substances include the following:

- 1) All toxic pollutants and hazardous substances listed under the Clean Water Act
- 2) Hazardous wastes regulated under RCRA
- 3) Any hazardous air pollutant under the Clean Air Act
- 4) Chemicals designated as “immediately hazardous” under the Toxic Substance Control Act

The EPA is also allowed to designate additional substances as hazardous if they present a substantial danger to the public health or welfare or the environment when released.

hazardous waste. A substance defined pursuant to the Solid Waste Disposal Act amended by RCRA, a hazardous waste is a solid waste, or a combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics, may contribute to an increase in mortality or an increase in serious irreversible, or incapacitating illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.

historical recognized environmental condition. A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

landfill. A place or area of land used for the disposal of solid wastes as defined by state solid waste regulations. Synonymous with the term *solid waste disposal site*, a landfill is also known as a garbage dump or trash dump.

likelihood. As used in this Report, the term *likelihood* pertains to the probability of a match between the prediction of an event and its actual occurrence. As used by SCS Engineers, the term *low likelihood* approximates a percentage range to 10 to 20 percent; *moderate likelihood* approximates 40 to 60 percent; and *high likelihood* approximates 80 to 90 percent.

Material Safety Data Sheet (MSDS). Written or printed material concerning a hazardous substance which is prepared by chemical manufacturers, importers, and employers for hazardous chemicals pursuant to OSHA standards.

obvious. That which is plain or evident. The term refers to a condition or fact that could not be ignored or overlooked by a reasonable observer while physically observing the property.

PCE. Perchloroethene/perchloroethylene, or “Perc”; also tetrachloroethene/tetrachloroethylene; commonly used as a solvent for dry-cleaning.

petroleum products. Petroleum, including crude oil, natural gas, natural gas liquids, liquefied natural gas, synthetic gas usable for fuel, kerosene, diesel oil, jet fuels, motor oil, hydraulic oil, gear oils, and fuel oil.

recognized environmental conditions (RECs). Recognized environmental conditions, as defined by the American Society for Testing and Materials (ASTM), include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is

not intended to include *de minimis* conditions.

retail quantities (RQs). Quantities of hazardous materials usually less than 50 gallons, 100 pounds, or 200 cubic feet of gas (under the regulatory reporting limits).

small retail quantities (SRQs). Quantities of hazardous materials in containers of 5 gallons or less, and less than 50 gallons in aggregate.

solvent. A chemical compound that is capable of dissolving another substance and is itself a hazardous substance, such as TCE, TCA, PCE, Stoddard solvent, paint thinner, mineral spirits, and acetone. Solvents are used in a number of manufacturing or industrial processes.

TCA. Trichloroethane; also 1,1,1 TCA; a commonly used industrial solvent for degreasing/cleaning.

underground storage tank (UST). Any tank, including underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10 percent or more beneath the surface of the ground.

visually and/or physically observed. This term refers to observations made by vision during the Site visit while walking through the Site or Site building(s), and observations made by the sense of smell, particularly awareness of noxious or foul odors.

ASSISTANT DIRECTOR

REQUEST TO REVIEW PUBLIC RECORDS FOR THE SITE ASSESSMENT AND MITIGATION (SAM) PROGRAM AND THE HAZARDOUS MATERIALS DIVISION (HMD)

Requestor Name: Tyler Overton	E-Mail: toverton@scsengineers.com
Phone: (858) 571-5500	FAX: (858) 571-5357
Company Name: SCS Engineers	
Mailing Address: 8799 Balboa Ave., Suite 290, San Diego, CA 92123 (You may attach a business card/overprint with business card if preferred)	

Additional information on public records maybe accessed from the DEH website, www.sdcdeh.org. Fax your completed form to the Public Records Program at (619) 338-2377 or attach completed form and e-mail to deh.publicrecords@sdcounty.ca.gov. The following information is required so that our files may be accurately searched. Separate forms are needed for each address or parcel number.

1190 Island View Lane, Encinitas, CA

or

Exact Address (Street, City and Zip Code)

Assessor's Parcel Number

Optional information (establishment permit number, business name, etc.):

If you indicate the purpose of your search, it will help us identify all the public records you may wish to review. If you know the program file you want to review, please check below:

- | | |
|---|---|
| <input checked="" type="checkbox"/> Contaminated Property Investigation(s) (SAM Cases) | <input checked="" type="checkbox"/> SAM Closure Letter/Report |
| <input checked="" type="checkbox"/> Hazardous Materials Permit & Underground Storage Tank Files (HMD/UST) | <input type="checkbox"/> Other: _____ (specify) |

DEH complies fully with the California Public Records Act and the Federal Freedom of Information Act. Every properly completed request will be processed in the order it is received. Some files are on line as indicated below. Photocopies of file items may be requested. **A fee of \$.15 per page is charged to cover cost of copies.**

OFFICE USE ONLY BELOW THIS LINE

Files reviewed by: _____ of _____	Date: ____/____/____
Files copied for: _____ of _____	Date: ____/____/____
Request cancelled by: _____	Date: ____/____/____

ENVIRONMENTAL LIEN SEARCH REPORT

The NETR Environmental Lien and AUL Search Report

**1190 ISLAND VIEW LANE
ENCINITAS, CALIFORNIA**

Thursday, April 4, 2019

Project Number: L19-00646

2055 East Rio Salado Parkway
Tempe, Arizona 85281

Telephone: 480-967-6752
Fax: 480-966-9422

ENVIRONMENTAL LIEN AND AUL REPORT

The NETR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;

Thank you for your business
Please contact NETR at 480-967-6752
with any questions or comments

SANBORN FIRE INSURANCE MAPS -
no coverage letter

Preliminary Sanborn® Map Report

3/29/2019

Site Name:
1190 Island View Lane
1190 Island View Lane
Encinitas, CA 92024

Client Name:
SCS Engineers
8799 Balboa Avenue
San Diego, CA 92123
Contact: Tyler Overton

A preliminary search of the Complete Sanborn Library collection has been conducted, and fire insurance maps covering the target property location provided by SCS Engineers were identified for the years listed below. Certified Sanborn Map search results will be provided in the final version of this report. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by Sanborn Library LLC, the copyright holder for the collection.

Preliminary Sanborn Results:

Site Name: 1190 Island View Lane
Address: 1190 Island View Lane
City, State, Zip: Encinitas, CA 92024
Cross Street:
P.O.# 01206537.03
Project: 1190 Island View Lane
Certification # Provided with final report
Maps Identified:

Preliminary Report

This report contains the results of a preliminary search for the target property. A final EDR Sanborn Map Report will be delivered after quality review is conducted. Only a final report should be used in connection with a final site assessment.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

UNMAPPED PROPERTY

This document certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client-supplied target property information, and fire insurance maps covering the target property were not found.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>SAN DIEGUITO UNION H</i> EPA ID:: CAD982019101	<i>675 BALOUR DR</i>	<i>WNW 1/8 - 1/4 (0.133 mi.)</i>	<i>A1</i>	<i>8</i>

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/28/2019 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 9 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 11 CPS-SLIC sites within approximately 0.5 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

<p>Local Agency: RB Case Number: File Location: Potential Media Affected: Potential Contaminants of Concern: Site History:</p>	<p>SAN DIEGO COUNTY LOP Not reported Not reported Not reported Not reported Staff of the County of San Diego, Department of Environmental Health (DEH), Site Assessment and Mitigation Program (SAM) reviewed the Phase I Environmental Site Assessment (ESA) report (August 2013), Pesticide Sampling Summary Letter (September 2013), and Supplemental Pesticide Report (March 2014) for the above-referenced property. The reports were prepared by Hillmann Consulting, LLC (Hillmann) and uploaded to GeoTracker on May 27, 2015. As described in the reports, the 1.93-acre property is located south of Encinitas Boulevard and west of Balour Drive in Encinitas, California. Greenhouses and a single residence currently occupy the property, which is comprised of two parcels: APNs 259-101-22-00 and 259-101-23-00. The structures were reportedly built in 1961. A Phase I ESA performed for the property in 2013 identified the agricultural use of the property as a recognized environmental condition (REC) and recommended sampling shallow soil underlying the property for pesticides. Hillmann collected soil samples at a depth of 0.5-foot below ground surface (bgs) in September 2013 from six borings advanced using hand-auger equipment. The samples were analyzed for organochlorine pesticides (OCPs) and the metals arsenic and lead. OCPs and arsenic were not detected in the samples. Lead was detected at a maximum concentration of 8.3 milligrams per kilogram (mg/kg). Additional samples were collected in March 2014 from six new borings advanced adjacent to the 2013 boring locations. The samples were collected from 2.5 to 3.0 feet bgs. OCPs and arsenic were not detected in the deeper samples and the maximum detected concentration of lead was 19 mg/kg. Based on the findings presented in the above-referenced reports, DEH has no concerns or restrictions concerning future use of the property relative to the historical use of pesticides.</p>

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Site History: According to the Phase I ESA, The Site consists of one rectangular shaped parcel (2.38 acres) on the east side of Bonita Drive and is currently occupied by two residential homes and undeveloped land. The Site appears to have been utilized as agricultural land in 1939 until it was converted to undeveloped land in 1946. Between 1979 and 1985, the Site was developed with greenhouses. By 2009, the greenhouses were removed from the Site with the residential homes remaining in the northeastern corner. The Phase II ESA reports on the sampling of near surface native soil for pesticides and Title 22 Metals. Four soil samples were collected from four borings located throughout the Site. Results indicated that none of the soil samples had levels of pesticides or metals that exceed accepted screening levels for residential use. The reports summarize the environmental investigation activities performed at the Site. Provided that the information presented to DEH was complete, accurate, and representative of existing site conditions, this agency concurs that the cleanup goals established for the subject site have been met.

DAYU INVESTMENT NEW HOMES (Continued)

S104761389

RB Case Number: Not reported
File Location: Local Agency
Potential Media Affected: Soil
Potential Contaminants of Concern: Chlordane, Other Insecticides / Pesticide / Fumigants / Herbicides, Toxaphene
Site History: Refer to "Site Maps/Documents" tab for Administrative Closure A Phase I Site Assessment was completed as part of a change in zoning to allow a residence to be built on the property. The report revealed possible pesticide contamination due to agricultural site use since approximately 1928, and the consultant recommended soil sampling for organochlorine pesticides and arsenic. The Phase I Report and a workplan were submitted to DEH for review, and a VAP case was opened. The workplan proposes soil sampling in areas of potential contamination, the location of the proposed residence, and in random locations across the site. Soil samples will be analyzed for organochlorine pesticides and arsenic. Soil samples will also be collected on adjacent properties to determine background arsenic levels. A Phase II Environmental Site Assessment Report was submitted to DEH in April 2011, and summarized the results of soil sampling and analysis from the site surface to a maximum depth of 3.5 feet below ground surface (bgs) from 8 locations on site and one location off site. The sample from the off site location was to determine a background arsenic level for the site. Organochlorine pesticides and arsenic were not detected in the off-site soil sample. The organochlorine pesticides Chlordane, Dieldrin, and Toxaphene, as well as arsenic, were detected at concentrations that exceed California human health screening levels (CHHSLs) for soil, but did not exceed the TTCs. Samples containing concentrations of organochlorine pesticides exceeding the CHHSLs were located adjacent to the floor drain in the existing office building to the maximum depth sampled (3.5 feet bgs), and adjacent to the above ground storage tank (AST) and across the eastern portion of the site in surface samples. Arsenic exceeded the CHHSL in four sampling locations at depths of up to 1.5 feet bgs. The consultant concludes that the lateral and vertical extent of soil with concentrations of organochlorine pesticides that exceed the CHHSLs is unknown in the vicinity of the floor drain in the office building. In addition, the lateral extent of soil with concentrations of organochlorine pesticides that exceed the CHHSLs is unknown in the vicinity of soil samples B-5, B-6, and B-7 located in the eastern portion of the property, and soil sample B-8 located adjacent to the AST. Although the levels of arsenic exceed the CHHSL in four samples, they do not exceed reported background levels of arsenic in Southern California. As a result, the consultant concludes that the arsenic detected is naturally occurring. The consultant recommended additional soil sampling in vicinity of the floor drain, AST, and soil samples B-5, B-6, and B-7. The consultant also recommended meeting with DEH to discuss the proposed site redevelopment, including soil reuse and management plans. The consultant also recommended evaluation of potential site development options after the extent of organochlorine pesticide impacts to soil has been delineated. DEH concurred with the consultants conclusions and recommendations, and stated that a workplan detailing the proposed additional soil sampling should be submitted to DEH for approval prior to performing additional site assessment activities. Please see the Environmental Data tab for additional site specific information submitted.

 RB Case Number: Not reported
 File Location: Local Agency
 Potential Media Affected: Soil
 Potential Contaminants of Concern: Chlordane, DDD / DDE / DDT, Other Insecticides / Pesticide / Fumigants / Herbicides, Toxaphene
 Site History: The site property consists of approximately 10.14 acres located at 1264 Lake Drive in Encinitas that is bounded by Santa Fe Drive to the north and Lake Drive to the east. The site is primarily surrounded by residences with the exception of a relatively small nursery to the east across Lake Drive. The site was predominately utilized for agricultural purposes since at least 1930. Following the preparation of Phase I and Phase II reports, City Ventures entered the Department of Environmental Health (DEH) Voluntary Assistance Program in October 2009 (H39744-001) and requested oversight of assessment and mitigation activities associated with the detection of

BROWNS PLANTS INCORPORATED (Continued)

S110041810

pesticide-impacted soil. City Ventures subsequently purchased the site property on April 7, 2010 for redevelopment as single family residences. Assessment activities began at the site in 2004 with the completion of Phase I and initial Phase II activities. Subsequent assessment activities were conducted over the next ten years to better characterize the site, including numerous shallow soil samples and the installation of one groundwater monitoring well to assess groundwater levels. The assessment activities identified detectable concentrations of pesticides in shallow subsurface soil, several which were observed at concentrations above California Human Health Screening Levels (CHHSLs). Based on an investigation of undisturbed native soil near the site, the consultant concluded that arsenic was not observed above background levels at the site. Mitigation activities primarily focused on toxaphene and dieldrin, which were observed above CHHSLs in numerous samples across the site at concentrations up to 5.54 milligrams per kilogram (mg/kg), and 0.540 mg/kg, respectively. Pesticide-impacted soil generally existed above 5 feet below grade (fbg) and was located somewhat sporadically throughout the property. Assessment activities ultimately identified approximately 29,000 cubic yards of pesticide-impacted soil that potentially exceeded CHHSLs. Depth to groundwater at the site was observed at approximately 35 fbg (pre-construction grade) in one monitoring well located in the central portion of the site. The purpose of the well was to identify the depth to groundwater to ensure that there was adequate separation between reused (buried) soil and groundwater. Groundwater samples were not collected from the monitoring well; however the consultant concluded that pesticides in shallow soil had limited mobility and did not impact groundwater. Cleanup goals for the removal of pesticide-impacted soil were based on CHHSLs. The majority of pesticide-impacted soil which exceeded CHHSLs, approximately 29,000 cubic yards, was excavated, consolidated onsite, and capped in two separate excavations along the north eastern and central eastern portions of the site. Confirmation samples were collected every 1,000 square feet in the bottom of excavations and from sidewalls every 100 linear feet to ensure cleanup goals were met. The reuse excavations were situated beneath the proposed front yards and residence slabs with a minimum clean soil cap of 8 feet (to surface grade) to minimize the potential for disturbance. Pesticide-impacted soil in the north eastern reuse excavation was placed from approximately 317.8 feet above mean sea level (amsl) to 331.5 feet amsl. Pesticide-impacted soil in the central eastern reuse excavation was placed from approximately 314 feet amsl to 326.5 feet amsl. The consultant reports that no utilities were installed to depths greater than five fbg (within 3 feet of impacted soil) over soil reuse excavations, minimizing the potential for incidental exposure during utility installation, repair, or maintenance activities. A covenant has been prepared and recorded by the County of San Diego for parcels which overlie pesticide-impacted soil to ensure that future property owners are aware of the impacted soil, to minimize the potential for disturbance of impacted soil, and to outline site management restriction and notification requirements for existing and future property owners. Based on the measured groundwater elevation of 302 feet amsl, the minimum distance between groundwater and undocumented fill is estimated to be approximately 12 feet. A thorough air monitoring plan was prepared and approved by DEH prior to the implementation of mitigation activities. However, the consultant implemented an

BROWNS PLANTS INCORPORATED (Continued)

S110041810

alternative air monitoring plan that was far less substantial. The consultants approach generally relied on dust abatement measures, primarily the use of water, to protect public health, with less emphasis on quantitative air monitoring methods. While the air monitoring approach utilized for this project was not approved by DEH, a similar approach had been recently approved and implemented for a project overseen by the Department of Toxic Substances Control. The consultant reported that the air monitoring plan utilized at the site was reviewed and approved by a certified industrial hygienist. Therefore, it is the consultants opinion that the air monitoring plan implemented at the site was protective of public health. The consultant concluded that in the sites current configuration and condition, the proposed site use as slab on grade residential is protective of human health and the environment. It is the consultants opinion that no further action is necessary at the site. Based on the provided data, DEH agrees with this conclusion, provided that the provisions in the aforementioned land use covenant remain in effect.

generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History:

The subject property is 1.19-acre in size and has been occupied by a fern and tropical plant growing operation and nursery. The site has been under agricultural use since approximately 1953. Greenhouses were initially constructed in the eastern portion of the property in 1953. Aerial photography dating to 1974 indicates that the current residence on the property had been constructed, along with two new greenhouses. According to subsequent aerial photography, the residence, storage shed, and 13 greenhouses have occupied the property since approximately 1980. A Phase I Environmental Site Assessment (ESA) and a Limited Phase II ESA were completed in the fall of 2013. In August 2014, BCC Properties entered into the Department of Environmental Healths (DEH) Voluntary Assistance Program (VAP), and requested that DEH review the environmental documents, provide oversight of any further investigation and oversee any environmental remediation, if needed. DEH understands that this property is going to be redeveloped into three residential lots with no net export of soils from the site. The case was evaluated for residential use. The assessment identified minor impacts of organochlorine pesticides which were below their respective California Human Health Screening Levels (CHHSLs) for a residential use. The organochlorine pesticides detected were 1,4-DDD, 1,4-DDE, 1,4-DDT, and chlordane and their respective CHHSL levels are 2.3, 1.6, 1.6, and 0.43 milligrams per kilogram (mg/kg). Based on the historical use the site, soils were also tested for Arsenic. Arsenic was detected at concentrations ranging from 1.4 to 34 mg/kg in the upper two feet of soil across the site. Geocon compared the on-site arsenic concentrations to the southern California regional background level of 12 mg/kg developed by the California Department of Toxic Substance Control (DTSC). The detected arsenic concentration was exceeded at one sampling location. The investigation identified an area about 10 feet by 30 feet and 2 feet in depth where the impacted soil was greater than the 12 mg/kg background level. In September 2014, a Remedial Excavation Work Plan was submitted and was approved in October 2014. The plan proposed to excavate and remove arsenic impacted soil that was greater than the regional background levels. The remedial excavation activities took place in August and September of 2015 resulting in 70.47 tons (approximately 42 cubic yards) of impacted soil being transported off-site to Simi Valley Landfill, Simi Valley, California for disposal. DEH concurs with the conclusion in the Remedial Excavation Report that the arsenic impact has been cleaned up to the clean-up goal of 12 mg/kg. Based on the completed investigations and remedial excavation completed, no further action is required relative to the on-site residual pesticides and arsenic for site development. If during site development the project requires a net export of soil, the soil should go to an approved disposal facility due to the residual pesticide and arsenic impacts.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 02/06/2019	Source: EPA
Date Data Arrived at EDR: 02/15/2019	Telephone: N/A
Date Made Active in Reports: 03/15/2019	Last EDR Contact: 03/14/2019
Number of Days to Update: 28	Next Scheduled EDR Contact: 04/15/2019
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 03/27/2019

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 03/27/2019

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/31/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/04/2019	Telephone: 703-603-0695
Date Made Active in Reports: 03/08/2019	Last EDR Contact: 02/04/2019
Number of Days to Update: 32	Next Scheduled EDR Contact: 06/10/2019
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/31/2019	Source: Environmental Protection Agency

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

WMUDS/SWAT: Waste Management Unit Database

Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

Data Release Frequency: No Update Planned

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 09/21/2018

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

JACK MILLER
ASSISTANT DIRECTOR

REQUEST TO REVIEW PUBLIC RECORDS FOR THE SITE ASSESSMENT AND MITIGATION (SAM) PROGRAM AND THE HAZARDOUS MATERIALS DIVISION (HMD)

Requestor Name: Tyler Overton **E-Mail:** toverton@scsengineers.com

Phone: (858) 571-5500 **FAX:** (858) 571-5357

Company Name: SCS Engineers

Mailing Address: 8799 Balboa Ave., Suite 290, San Diego, CA 92123
(You may attach a business card/overprint with business card if preferred)

Additional information on public records maybe accessed from the DEH website, www.sdcdeh.org. Fax your completed form to the Public Records Program at (619) 338-2377 or attach completed form and e-mail to deh.publicrecords@sdcounty.ca.gov. The following information is required so that our files may be accurately searched. Separate forms are needed for each address or parcel number.

_____ or _____
 Exact Address (Street, City and Zip Code) Assessor's Parcel Number

Optional information (establishment permit number, business name, etc.): _____

If you indicate the purpose of your search, it will help us identify all the public records you may wish to review. If you know the program file you want to review, please check below:

- Contaminated Property Investigation(s) (SAM Cases) SAM Closure Letter/Report
- Hazardous Materials Permit & Underground Storage Tank Files (HMD/UST) Other: _____ (specify)

DEH complies fully with the California Public Records Act and the Federal Freedom of Information Act. Every properly completed request will be processed in the order it is received. Some files are on line as indicated below. Photocopies of file items may be requested. **A fee of \$.15 per page is charged to cover cost of copies.**

OFFICE USE ONLY BELOW THIS LINE

Files reviewed by: _____ of _____ Date: ____/____/____

Files copied for: _____ of _____ Date: ____/____/____

Request cancelled by: _____ Date: ____/____/____

Professional Experience

Mr. Montague is a Professional Geologist (PG) and licensed contractor with 17 years of experience in environmental consulting, general contracting, commercial and residential development, and property and asset management. He has performed and reviewed over 500 Phase I Environmental Site Assessments (ESAs), and has completed Phase II subsurface investigations, Human Health Risk Assessments (HHRAs), Remedial Action Plans (RAPs), site remediation activities, geotechnical investigations, asbestos and lead-based paint (LBP) surveys, and asbestos air monitoring. His development, general contracting, and property and asset management experience includes managing construction through lease-up; lease administration and property operations and maintenance; contract procurement and administration; oversight of subcontractors and staff; and interfacing with clients, owners, tenants, and regulatory agencies.

Mr. Montague's project experience is summarized below.

Brixton Capital, Gasoline Service Station Redevelopment with Retail Buildings, Chula Vista, CA. As Project Manager, Mr. Montague oversaw the assessment, remedial planning, and remediation consisting of oversight, segregation, and on-site burial of residual petroleum hydrocarbon (PHC) impacted soils from a former gasoline service station release property redeveloped with new retail buildings.

RD Brown Company, Leaking Underground Storage Tank (LUST) Case Assessment and Remediation, City of Imperial, CA. As Project Manager, Mr. Montague oversaw several on- and off-site soil, soil vapor, and groundwater assessments, and is currently overseeing ongoing remediation and monitoring of a proposed senior living facility at a former gasoline service station.

San Diego County Water Authority (SDCWA), Environmental Consulting Services, San Diego, CA. As Project Manager, Mr. Montague completed several ESAs and subsurface assessments to assist the SDCWA in obtaining easements required to complete the Carlsbad Desalination Project.

City of Encinitas, Site Investigation and Planning, Encinitas Community Park, Encinitas, CA.

As Project Geologist, Mr. Montague provided oversight for the mitigation and monitoring activities of pesticides in soil from the Hall property, which consists of 43 acres of coastal bluff that was formerly used as a nursery and was redeveloped into a community park. Under the oversight of the County of San Diego Department of Environmental Health (DEH), work consisted of Phase II ESAs, remedial planning and implementation of on-site reuse/burial of 45,000 cubic yards of pesticide-impacted soil in a Soil Management Zone, and creation of a land-use covenant. SCS received an award for this project with the Industrial Environmental Association (IEA).

Los Angeles Unified School District (LAUSD), Assessment and Remediation, Various Locations in Los Angeles County, CA.

Mr. Montague managed and performed the environmental characterization and cleanup of various proposed school redevelopment projects overseen by the California Department of Toxic Substances Control (DTSC) that required Phase I ESAs, preliminary environmental assessments or subsurface investigations, and preparation and implementation of removal action work plans to obtain “no further action” status prior to redevelopment.

City Heights Revitalization Corporation, Brownfields Assessment and Remediation, City Heights, CA.

Mr. Montague managed a subsurface investigation for an entire Brownfields city block planned for redevelopment. The investigation included extensive drilling, trenching, and hand auguring to estimate the volume of lead- and hydrocarbon-impacted soil from residual contamination from a former service station and from lead-based paint. Work also included negotiation of cleanup levels with the local regulatory agency.

Casmalia Steering Committee, Remedial Investigation, Casmalia, CA. Mr. Montague managed and performed soil vapor sampling at the Casmalia Hazardous Waste Management Facility, a Class I hazardous waste site, for a remedial investigation and feasibility study of soil gas impacts submitted to the US Environmental Protection Agency (EPA). Soil gas impacts to ecological receptors were assessed, considering specific regulatory guidance, including the joint DTSC and Los Angeles Regional Water Quality Control Board (LARWQCB) Advisory on Active Soil Gas Investigations.

The Boeing Company, Underground Storage Tank (UST) Assessment, Long Beach, CA. Mr. Montague performed subsurface vapor intrusion to indoor air analysis at a former aeronautics manufacturing facility. Soil, soil vapor, and sub-slab soil vapor extraction (SVE) assessments were conducted to determine appropriate corrective actions associated with former solvent USTs. Work was performed under the corrective action consent agreement with the DTSC.

Trihydro Corporation, Soil Vapor Sampling, Hooven, OH. Mr. Montague performed SVE sampling from indoor air probes and outdoor multi-level probes at residences in Hooven, OH. This project focused on helping to evaluate the potential for subsurface vapor intrusion to indoor air from volatilization of PHCs in groundwater, or light, non-aqueous phase liquid petroleum product originating from an adjacent former fuel and asphalt petroleum refinery. The vapor intrusion pathway was evaluated based on a request by EPA, Region V, and was performed in accordance with the EPA-issued document, *Draft Guidance for Evaluating the Vapor Intrusion to Indoor Air Pathway from Groundwater and Soil*, 2002.

CSK Auto, Phase I ESAs, Various Sites in the Western US. Mr. Montague conducted Phase I ESAs, subsurface investigations, and geotechnical investigations for the development of auto parts chain stores in the western US. Work included site investigations, drilling operations, and records research.

AT&T/Gianni & Associates, Phase I ESAs and Geotechnical Investigations, San Diego, CA. Mr. Montague completed Phase I ESAs, transaction screen assessments, National Environmental Policy Act (NEPA) reports, asbestos surveys, and geotechnical investigations involving the development of wireless communications sites.

Ford Mance Company, Construction and Property Management, Mixed-Use Building at 111 Chesterfield Drive, Encinitas, CA. Mr. Montague served as Project Manager during the development and construction phases of a 2-story, Type V, 3,874-square-foot mixed-use building with subterranean parking. Responsibilities included managing all phases of construction and shell and tenant improvements, and assisting in construction supervision activities and lease-up. Development activities included oversight and collaboration of architectural, mechanical, electrical, and plumbing plans preparation, assisting with design research and decisions, obtaining various permits, and preparing cost and budgets. After construction, Mr. Montague also served as the Property and Asset Manager.

Ford Mance Company, Construction and Property Management, Del Norte Medical Plaza, Carlsbad, CA. Mr. Montague served as Project Manager during the development and construction of a 2-story, Type II, medical building with subterranean parking. Responsibilities included contracting out all phases of shell construction of 22,000 square feet of rentable area for medical use, collaborative oversight concerning architectural, mechanical, electrical, and plumbing plans preparation, assisting with design research and decision-making, obtaining various permits, and preparing costs and budgets. After construction, he also served as Property and Asset Manager.

California Department of Fish and Game, Carpinteria Creek Watershed Plan, Carpinteria, CA. Mr. Montague collaborated with local and state government representatives, and various stakeholders, to aid in preparing the Carpinteria Creek Watershed Plan under the Cachuma Resource Conservation District for the California Department of Fish and Game (CDFG). Work consisted of research, meetings, various field assessments, report writing, and map creation. The Plan served as an amendment to the Water Quality Control Plan for the Central Coast Region.

TYLER OVERTON

Education

BA – Environmental Studies/Geography, University of Colorado, 2002

Professional Licenses

AHERA 24-Hour Asbestos Building Inspector (No. BI-179052)

Specialty Certifications

OSHA 40-Hour EPA-Approved Hazardous Waste Operations and Emergency Response Training
State of California Site Surveillance Technician (Asbestos)

Professional Experience

Mr. Overton is an environmental professional specializing in the application of due diligence, including Phase I and Phase II Environmental Site Assessments (ESAs). His experience includes subsurface investigations, remediation, soil management, landfill evaluations, health risk assessments (HRAs), ambient air monitoring, groundwater sampling and monitoring, watershed analysis, land use studies, litigation support, and property assessments. In working with developers, investors, lending institutions, and municipalities in performing Phase I ESAs, he has completed site reconnaissance, regulatory agency record reviews, historical record reviews, historical land use interpretations, data collection, data evaluation, and site assessment reports. He can accurately assess sites and provide valuable information for reports that meets regulatory agency requirements.

Mr. Overton's project experience is summarized below.

Lowe's, Excavation Monitoring, San Diego, CA. Mr. Overton served as a soil technician for the excavation monitoring of contaminated soil below the footprint of a new building, including the removal of underground storage tanks (USTs). Work and tank removal were conducted under the oversight of the County of San Diego Department of Environmental Health (DEH), and consisted of Phase II ESAs and preparation and implementation of a Property Mitigation Plan.

Republic Services, Inc., Gas Monitoring Probe Installation for Sycamore Landfill, Santee, CA. Mr. Overton served as the Project Coordinator for the installation of six new perimeter monitoring probes at the Sycamore Landfill. Installation included drilling and construction of probes up to 470 feet deep, which allowed for the detection of migrating landfill gas (LFG).

Pacific Steel, Resource Conservation and Recovery Act (RCRA) Soil Shipping, San Diego, CA. Mr. Overton served as the point of contact for the removal and disposal of a hazardous waste soil stockpile. SCS monitored dust emissions and the loading and shipping of hazardous soil to ensure that safe handling practices were followed.

Excavation Monitoring of Contaminated Soils for SDG-Left Field and Cisterna Building, San Diego, CA. Mr. Overton served as a soil technician for the excavation monitoring of lead-, diesel-, and gasoline-contaminated soils removed as a part of the new building's below-ground parking structure. Work was conducted under the oversight of the County of San Diego DEH, and consisted of Phase II ESAs and preparation and implementation of a Property Mitigation Plan.

Community Housing Works, Excavation Monitoring of Contaminated Soils, Vista, CA. Mr. Overton served as a soil technician for the excavation monitoring of gasoline-, diesel-, and motor oil-impacted soils that were removed prior to construction of a new subterranean parking structure. Approximately 2,000 cubic yards of soils were classified as hazardous and removed from the project site as a part of the mitigation.

Phase I and Phase II ESAs for Carlsbad Desalination Project, Carlsbad, CA. Mr. Overton completed several Phase I and Phase II ESAs for easements on many locations, including former agricultural lands. Locations included previous soil sampling conducted to determine the presence of pesticides, which were evaluated using the waste export criteria, based on pesticide concentrations found.

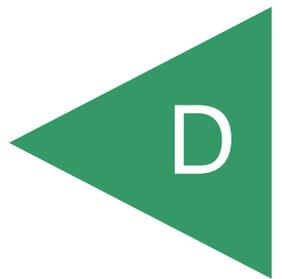

Republic Services, Inc., Stage 3B Cell Development for Sycamore Landfill, Santee, CA. Mr. Overton served as Project Manager for the construction of a new waste disposal cell at Sycamore Landfill. Construction included managing the excavation of soils, grading of the cell, identifying the correct location of the leachate collection system, and installation of a composite liner system. The construction of this disposal cell prolonged the life and increased capacity of the landfill by approximately 1 million cubic yards.

Bank of Hawaii Information Systems and Communications Office (ISCO), Remediation, Chino Hills, CA. Mr. Overton performed remediation activities at a former retail fueling facility with four USTs containing gasoline and diesel. He was directly involved in the implementation of a groundwater remediation system to inject hydrogen peroxide into the subsurface to remediate impacts from petroleum hydrocarbons (PHCs).

Asbestos Sampling. Mr. Overton has completed ESAs, asbestos surveys, and asbestos abatement monitoring activities at various project sites. During demolition and abatement, he has provided abatement monitoring involving air monitoring, visual inspections, and clearance air monitoring.

Storm Water Sampling for Lake San Marcos Study, San Marcos, CA. Mr. Overton was part of the SCS team investigating Lake San Marcos and San Marcos Creek, both listed as EPA Clean Water Act 303(d) Category 5 Impaired Water Bodies. He conducted storm water sampling and provided insight on laboratory analysis.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk

EXECUTIVE SUMMARY

characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/27/2020 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 10 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

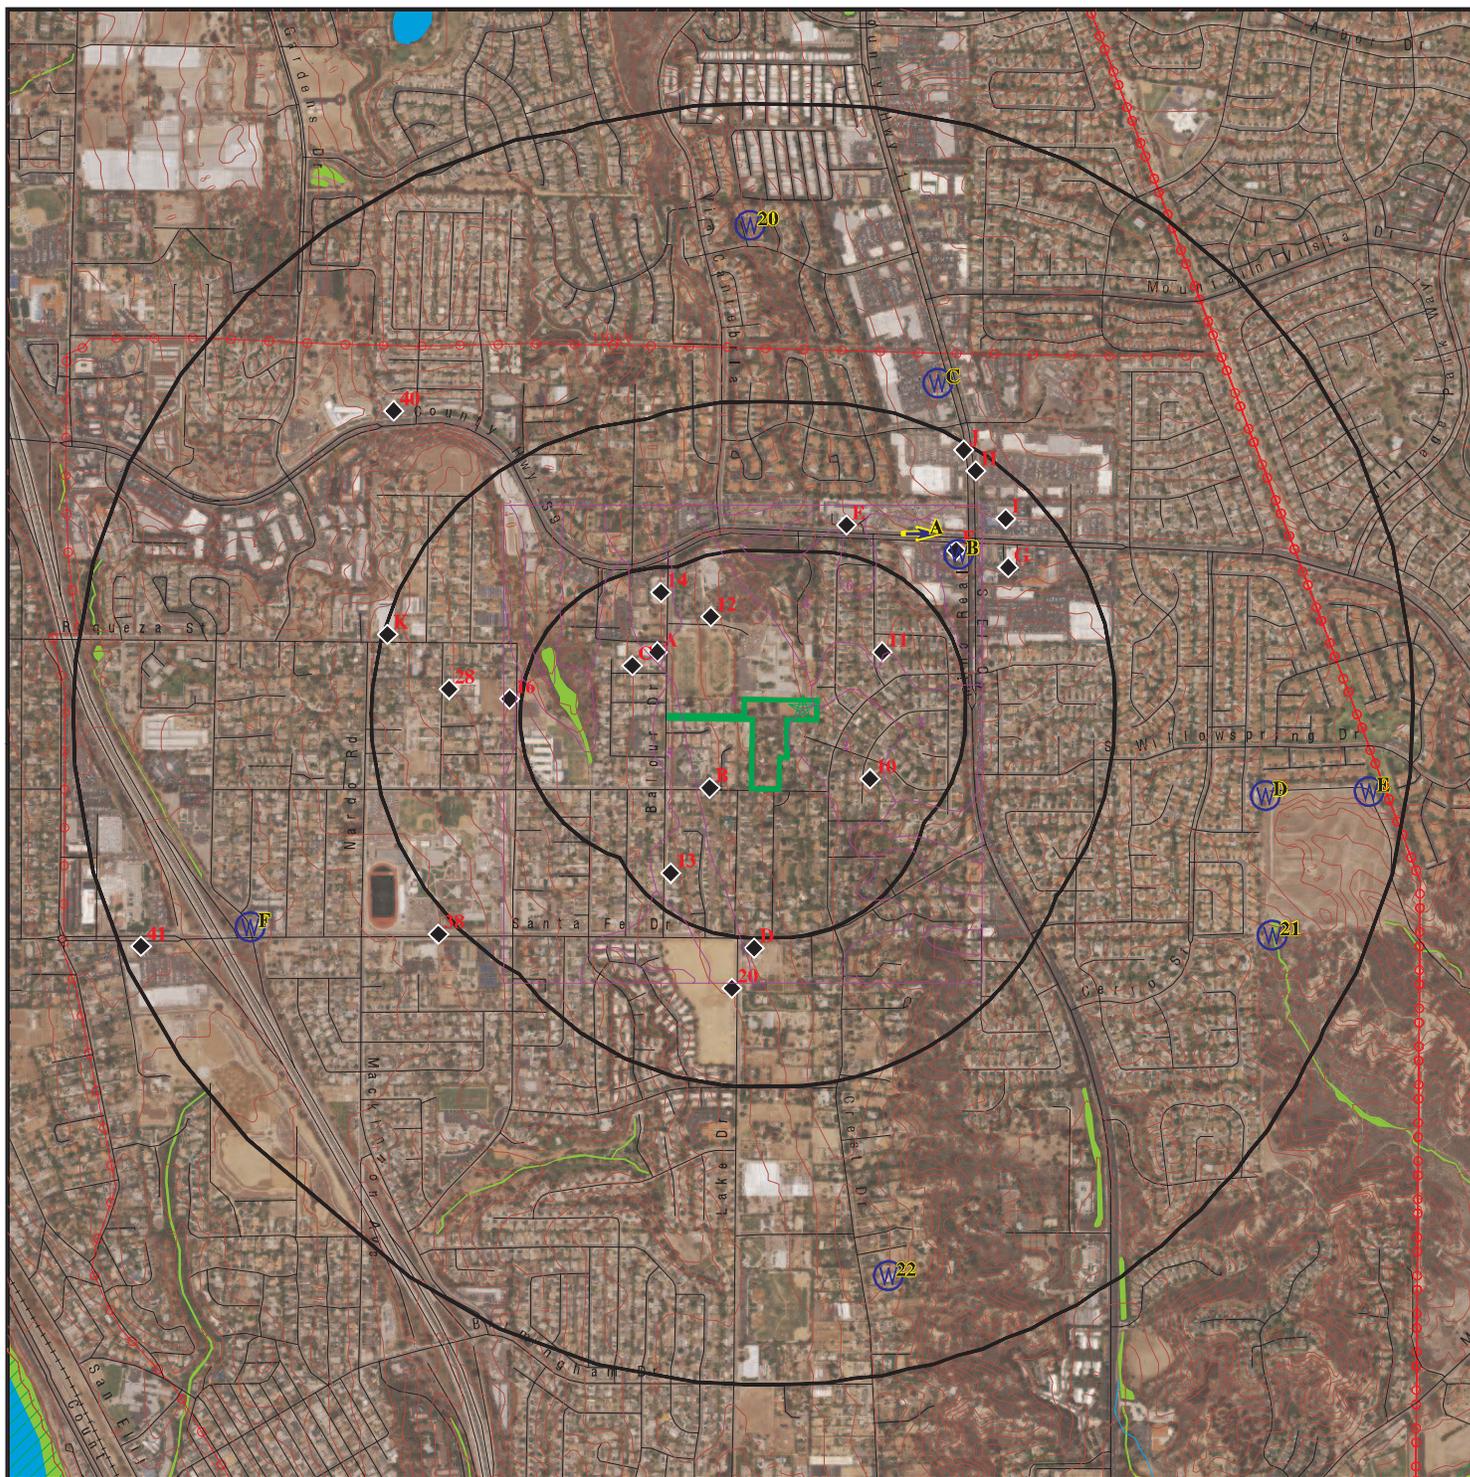

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Case Type: Cleanup Program Site
Case Worker: CF
Local Agency: SAN DIEGO COUNTY LOP
RB Case Number: Not reported
File Location: Not reported
Potential Media Affected: Not reported
Potential Contaminants of Concern: Not reported
Site History: Staff of the County of San Diego, Department of Environmental Health (DEH), Site Assessment and Mitigation Program (SAM) reviewed the Phase I Environmental Site Assessment (ESA) report (August 2013), Pesticide Sampling Summary Letter (September 2013), and Supplemental Pesticide Report (March 2014) for the above-referenced property. The reports were prepared by Hillmann Consulting, LLC (Hillmann) and uploaded to GeoTracker on May 27, 2015. As described in the reports, the 1.93-acre property is located south of Encinitas Boulevard and west of Balour Drive in Encinitas, California. Greenhouses and a single residence currently occupy the property, which is comprised of two parcels: APNs 259-101-22-00 and 259-101-23-00. The structures were reportedly built in 1961. A Phase I ESA performed for the property in 2013 identified the agricultural use of the property as a recognized environmental condition (REC) and recommended sampling shallow soil underlying the property for pesticides. Hillmann collected soil samples at a depth of 0.5-foot below ground surface (bgs) in September 2013 from six borings advanced using hand-auger equipment. The samples were analyzed for organochlorine pesticides (OCPs) and the metals arsenic and lead. OCPs and arsenic were not detected in the samples. Lead was detected at a maximum concentration of 8.3 milligrams per kilogram (mg/kg). Additional samples were collected in March 2014 from six new borings advanced adjacent to the 2013 boring locations. The samples were collected from 2.5 to 3.0 feet bgs. OCPs and arsenic were not detected in the deeper samples and the maximum detected concentration of lead was 19 mg/kg. Based on the findings presented in the above-referenced reports, DEH has no concerns or restrictions concerning future use of the property relative to the historical use of pesticides.

 Potential Media Affected: Not reported
 Potential Contaminants of Concern: Not reported
 Site History: According to the Phase I ESA, The Site consists of one rectangular shaped parcel (2.38 acres) on the east side of Bonita Drive and is currently occupied by two residential homes and undeveloped land. The Site appears to have been utilized as agricultural land in 1939 until it was converted to undeveloped land in 1946. Between 1979 and 1985, the Site was developed with greenhouses. By 2009, the greenhouses were removed from the Site with the residential homes remaining in the northeastern corner. The Phase II ESA reports on the sampling of near surface native soil for pesticides and Title 22 Metals. Four soil samples were collected from four borings located throughout the Site. Results indicated that none of the soil samples had levels of pesticides or metals that exceed accepted screening levels for residential use. The reports summarize the environmental investigation activities performed at the Site. Provided that the information presented to DEH was complete, accurate, and representative of existing site conditions, this agency concurs that the cleanup goals established for the subject site have been met.

Lead Agency Case Number: H39764-001
Latitude: 33.035647
Longitude: -117.265585
Case Type: Cleanup Program Site
Case Worker: VAP
Local Agency: SAN DIEGO COUNTY LOP
RB Case Number: Not reported
File Location: Local Agency
Potential Media Affected: Soil
Potential Contaminants of Concern: Chlordane, Other Insecticides / Pesticide / Fumigants / Herbicides, Toxaphene

Site History: Refer to "Site Maps/Documents" tab for Administrative Closure A Phase I Site Assessment was completed as part of a change in zoning to allow a residence to be built on the property. The report revealed possible pesticide contamination due to agricultural site use since approximately 1928, and the consultant recommended soil sampling for organochlorine pesticides and arsenic. The Phase I Report and a workplan were submitted to DEH for review, and a VAP case was opened. The workplan proposes soil sampling in areas of potential contamination, the location of the proposed residence, and in random locations across the site. Soil samples will be analyzed for organochlorine pesticides and arsenic. Soil samples will also be collected on adjacent properties to determine background arsenic levels. A Phase II Environmental Site Assessment Report was submitted to DEH in April 2011, and summarized the results of soil sampling and analysis from the site surface to a maximum depth of 3.5 feet below ground surface (bgs) from 8 locations on site and one location off site. The sample from the off site location was to determine a background arsenic level for the site. Organochlorine pesticides and arsenic were not detected in the off-site soil sample. The organochlorine pesticides Chlordane, Dieldrin, and Toxaphene, as well as arsenic, were detected at concentrations that exceed California human health screening levels (CHHSLs) for soil, but did not exceed the TTCs. Samples containing concentrations of organochlorine pesticides exceeding the CHHSLs were located adjacent to the floor drain in the existing office building to the maximum depth sampled (3.5 feet bgs), and adjacent to the above ground storage tank (AST) and across the eastern portion of the site in surface samples. Arsenic exceeded the CHHSL in four sampling locations at depths of up to 1.5 feet bgs. The consultant concludes that the lateral and vertical extent of soil with concentrations of organochlorine pesticides that exceed the CHHSLs is unknown in the vicinity of the floor drain in the office building. In addition, the lateral extent of soil with concentrations of organochlorine pesticides that exceed the CHHSLs is unknown in the vicinity of soil samples B-5, B-6, and B-7 located in the eastern portion of the property, and soil sample B-8 located adjacent to the AST. Although the levels of arsenic exceed the CHHSL in four samples, they do not exceed reported background levels of arsenic in Southern California. As a result, the consultant concludes that the arsenic detected is naturally occurring. The consultant recommended additional soil sampling in vicinity of the floor drain, AST, and soil samples B-5, B-6, and B-7. The consultant also recommended meeting with DEH to discuss the proposed site redevelopment, including soil reuse and management plans. The consultant also recommended evaluation of potential site development options after the extent of organochlorine pesticide impacts to soil has been delineated. DEH concurred with the

consultants conclusions and recommendations, and stated that a workplan detailing the proposed additional soil sampling should be submitted to DEH for approval prior to performing additional site assessment activities. Please see the Environmental Data tab for additional site specific information submitted.

 RB Case Number: Not reported
 File Location: Local Agency
 Potential Media Affected: Soil
 Potential Contaminants of Concern: Chlordane, DDD / DDE / DDT, Other Insecticides / Pesticide / Fumigants / Herbicides, Toxaphene

Site History:

The site property consists of approximately 10.14 acres located at 1264 Lake Drive in Encinitas that is bounded by Santa Fe Drive to the north and Lake Drive to the east. The site is primarily surrounded by residences with the exception of a relatively small nursery to the east across Lake Drive. The site was predominately utilized for agricultural purposes since at least 1930. Following the preparation of Phase I and Phase II reports, City Ventures entered the Department of Environmental Health (DEH) Voluntary Assistance Program in October 2009 (H39744-001) and requested oversight of assessment and mitigation activities associated with the detection of pesticide-impacted soil. City Ventures subsequently purchased the site property on April 7, 2010 for redevelopment as single family residences. Assessment activities began at the site in 2004 with the completion of Phase I and initial Phase II activities. Subsequent assessment activities were conducted over the next ten years to better characterize the site, including numerous shallow soil samples and the installation of one groundwater monitoring well to assess

groundwater levels. The assessment activities identified detectable concentrations of pesticides in shallow subsurface soil, several which were observed at concentrations above California Human Health Screening Levels (CHHSLs). Based on an investigation of undisturbed native soil near the site, the consultant concluded that arsenic was not observed above background levels at the site. Mitigation activities primarily focused on toxaphene and dieldrin, which were observed above CHHSLs in numerous samples across the site at concentrations up to 5.54 milligrams per kilogram (mg/kg), and 0.540 mg/kg, respectively. Pesticide-impacted soil generally existed above 5 feet below grade (fbg) and was located somewhat sporadically throughout the property. Assessment activities ultimately identified approximately 29,000 cubic yards of pesticide-impacted soil that potentially exceeded CHHSLs. Depth to groundwater at the site was observed at approximately 35 fbg (pre-construction grade) in one monitoring well located in the central portion of the site. The purpose of the well was to identify the depth to groundwater to ensure that there was adequate separation between reused (buried) soil and groundwater. Groundwater samples were not collected from the monitoring well; however the consultant concluded that pesticides in shallow soil had limited mobility and did not impact groundwater. Cleanup goals for the removal of pesticide-impacted soil were based on CHHSLs. The majority of pesticide-impacted soil which exceeded CHHSLs, approximately 29,000 cubic yards, was excavated, consolidated onsite, and capped in two separate excavations along the north eastern and central eastern portions of the site. Confirmation samples were collected every 1,000 square feet in the bottom of excavations and from sidewalls every 100 linear feet to ensure cleanup goals were met. The reuse excavations were situated beneath the proposed front yards and residence slabs with a minimum clean soil cap of 8 feet (to surface grade) to minimize the potential for disturbance. Pesticide-impacted soil in the north eastern reuse excavation was placed from approximately 317.8 feet above mean sea level (amsl) to 331.5 feet amsl. Pesticide-impacted soil in the central eastern reuse excavation was placed from approximately 314 feet amsl to 326.5 feet amsl. The consultant reports that no utilities were installed to depths greater than five fbg (within 3 feet of impacted soil) over soil reuse excavations, minimizing the potential for incidental exposure during utility installation, repair, or maintenance activities. A covenant has been prepared and recorded by the County of San Diego for parcels which overlie pesticide-impacted soil to ensure that future property owners are aware of the impacted soil, to minimize the potential for disturbance of impacted soil, and to outline site management restriction and notification requirements for existing and future property owners. Based on the measured groundwater elevation of 302 feet amsl, the minimum distance between groundwater and undocumented fill is estimated to be approximately 12 feet. A thorough air monitoring plan was prepared and approved by DEH prior to the implementation of mitigation activities. However, the consultant implemented an alternative air monitoring plan that was far less substantial. The consultants approach generally relied on dust abatement measures, primarily the use of water, to protect public health, with less emphasis on quantitative air monitoring methods. While the air monitoring approach utilized for this project was not approved by DEH, a similar approach had been recently approved and implemented for a project overseen by the Department of Toxic Substances Control.

The consultant reported that the air monitoring plan utilized at the site was reviewed and approved by a certified industrial hygienist. Therefore, it is the consultants opinion that the air monitoring plan implemented at the site was protective of public health. The consultant concluded that in the sites current configuration and condition, the proposed site use as slab on grade residential is protective of human health and the environment. It is the consultants opinion that no further action is necessary at the site. Based on the provided data, DEH agrees with this conclusion, provided that the provisions in the aforementioned land use covenant remain in effect.

 File Location: Local Agency
 Potential Media Affected: Not reported
 Potential Contaminants of Concern: Not reported
 Site History: The subject property is 1.19-acre in size and has been occupied by a fern and tropical plant growing operation and nursery. The site has been under agricultural use since approximately 1953. Greenhouses were initially constructed in the eastern portion of the property in

MAP FINDINGS

BRACERO (Continued)

1953. Aerial photography dating to 1974 indicates that the current residence on the property had been constructed, along with two new greenhouses. According to subsequent aerial photography, the residence, storage shed, and 13 greenhouses have occupied the property since approximately 1980. A Phase I Environmental Site Assessment (ESA) and a Limited Phase II ESA were completed in the fall of 2013. In August 2014, BCC Properties entered into the Department of Environmental Healths (DEH) Voluntary Assistance Program (VAP), and requested that DEH review the environmental documents, provide oversight of any further investigation and oversee any environmental remediation, if needed. DEH understands that this property is going to be redeveloped into three residential lots with no net export of soils from the site. The case was evaluated for residential use. The assessment identified minor impacts of organochlorine pesticides which were below their respective California Human Health Screening Levels (CHHSLs) for a residential use. The organochlorine pesticides detected were 1,4-DDD, 1,4-DDE, 1,4-DDT, and chlordane and their respective CHHSL levels are 2.3, 1.6, 1.6, and 0.43 milligrams per kilogram (mg/kg). Based on the historical use the site, soils were also tested for Arsenic. Arsenic was detected at concentrations ranging from 1.4 to 34 mg/kg in the upper two feet of soil across the site. Geocon compared the on-site arsenic concentrations to the southern California regional background level of 12 mg/kg developed by the California Department of Toxic Substance Control (DTSC). The detected arsenic concentration was exceeded at one sampling location. The investigation identified an area about 10 feet by 30 feet and 2 feet in depth where the impacted soil was greater than the 12 mg/kg background level. In September 2014, a Remedial Excavation Work Plan was submitted and was approved in October 2014. The plan proposed to excavate and remove arsenic impacted soil that was greater than the regional background levels. The remedial excavation activities took place in August and September of 2015 resulting in 70.47 tons (approximately 42 cubic yards) of impacted soil being transported off-site to Simi Valley Landfill, Simi Valley, California for disposal. DEH concurs with the conclusion in the Remedial Excavation Report that the arsenic impact has been cleaned up to the clean-up goal of 12 mg/kg. Based on the completed investigations and remedial excavation completed, no further action is required relative to the on-site residual pesticides and arsenic for site development. If during site development the project requires a net export of soil, the soil should go to an approved disposal facility due to the residual pesticide and arsenic impacts.

Inspection Date: 2018-06-20T07:38:00.000
Violation Code: HMD1604 Failed to maintain secondary containment empty. 22 CCR 66265.196(b) and (c); 66265.194(c)

Record ID: DEH2002-HUPFP-112619
Permit Status: Permit Renewed
Active Permit: Y
Facility Id Number: 37-000-112619
Program Element: Hazardous Waste Generator
Inspection Type: Routine
Inspection Number: 5933278
Return To Compliance Date: 2018-06-20T00:00:00.000
Nov: No
Violation Classification: Class II
Underground Storage Tank Id: Not reported
Container/Tank Id: Not reported
Last Update: 2020-06-27T02:33:48.000
Inspection Date: 2018-06-20T07:38:00.000
Violation Code: 3130007 Failed to keep a hazardous waste container or portable tank closed. 22 CCR 66265.173(a)

Record ID: DEH2002-HUPFP-112619
Permit Status: Permit Renewed
Active Permit: Y
Facility Id Number: 37-000-112619
Program Element: Hazardous Materials Release Response Plans
Inspection Type: Routine
Inspection Number: 4087488
Return To Compliance Date: 2014-05-20T00:00:00.000
Nov: No
Violation Classification: Minor
Underground Storage Tank Id: Not reported
Container/Tank Id: Not reported
Last Update: 2020-06-27T02:33:48.000
Inspection Date: 2014-05-12T09:11:00.000
Violation Code: 1010005 Failure to complete and/or submit an annotated site map if required by CUPA; 19 CCR 4 2729.2(a)(3).

 Site History: Comments: The Site is located at the southwest corner of El Camino Real and Via Molena Drive in Encinitas, California. Frontier Cleaners is located on the west side within the Encinitas Marketplace. As of 2013, Frontier Cleaners discontinued using a chlorinated solvent-based dry-cleaning method and is currently using a liquid silicone-based solvent. In March 1999, three borings were drilled within the Frontier Cleaners building. PCE was detected in soil. In

MAP FINDINGS

ENCINITAS MARKETPLACE (Continued)

S119007882

April 1999, seven soil borings and three soil gas probes were installed. Elevated PCE concentrations were detected in soil, groundwater and soil gas. The consultant recommended this data be presented to DEH for regulatory oversight guidance. In May 1999, Voluntary Assistance Program (VAP) H11011-001 was opened. In June 1999, six sub-slab soil gas probes and five soil borings were installed to groundwater. It was concluded that there were minimal impacts to groundwater and due to non-beneficial use designation, no further action should be granted by DEH. In addition, the environmental consultant recommended a soil vapor health risk assessment to assess the potential risk to the dry cleaner workers. In September 1999, one monitoring well was installed, and a vapor risk assessment was conducted using existing soil gas data. Dissolved phase PCE concentrations were non-detect in groundwater. Also, the vapor risk analysis concluded that no further action should be granted provided adequate ventilation is maintained at the dry cleaners. In September 28, 1999, DEH issued a no further action letter for VAP Case H11011-001. On October 11, 2016, seven soil gas probes, SGP-1 through SGP-7, were installed in and adjacent to the Frontier Cleaners building suite. Three soil gas probes, SGP-1 through SGP-3, were installed behind Frontier Cleaners and four soil gas probes, SGP-4 through SGP-7, were installed adjacent to current dry-cleaning activities. PCE was detected in all seven soil gas probes. These results were submitted to DEH through the VAP on October 19, 2016. In October 2017, soil gas probes SGP-8 through SGP-11 and soil borings SB-1 through SB-4 were installed. Similar to previous 2016 results, PCE was detected in all four soil gas probes with concentrations ranging from 4,700 a%/m3 detected in SGP-8 to 98,000 a%/m3 detected in SGP-9. Trichloroethene (TCE) was detected in one soil gas probe, SGP-10, with a maximum concentration of 150 a%/m3. In June 2018 and October 2018, indoor air sampling events were conducted in the Frontier Cleaners and adjacent tenant spaces (Juice Depot and Lawrence Furniture). During the June 2018 event, all indoor and ambient air samples were below laboratory detection limits with the exception of dichlorodifluoromethane (Freon 12), which had a j-flagged result of 5.8 ug/m3. During this sampling event, the sample IA-2 Summa canister was moved by the dry cleaner owner. During the October 2018 event, most of the indoor and ambient air samples were below laboratory detection limits which is consistent with the June 2018 indoor air sampling event. PCE and TCE were detected in samples IA-2 and IA-2 DUP within the Frontier Cleaners. The TCE and one PCE detections were above their respective screening levels. Photoionization detector (PID) concentrations were detected in various areas in proximity to the dry cleaners. In addition, select chemical products were tested within and adjacent to the dry cleaner. All the elevated indoor PID samples were collected in areas adjacent to indoor air samples IA-2 and IA-2 DUP. Based on the results of the PID testing, it appears the PCE, TCE and Freon 12 detected in samples IA-2 and IA-2 DUP during the October 2018 sampling event are likely due to chemicals used in the dry cleaner operations. In December 2018, DEH expressed concerns with the dry cleaner owner moving the Summa canister during the June 2018 sampling event and required an additional round of indoor air sampling prior to evaluating the site for closure. In September 2019, another indoor air sampling event was conducted. Three indoor air samples and one ambient air sample were collected. The sample locations were located within the Frontier Cleaners suite. One sample, IA-4, was collected at indoor air sample

location IA-2 and IA-2 DUP, which was reported to have elevated PCE and TCE concentrations in October 12, 2018. Additional samples were collected within the bathroom, IA-6, and near an indoor drain, IA-5, located adjacent to former soil gas probe SGP-4. The ambient air sample, OA-2, was located near the original ambient air sample OA-1. The indoor air sampling event was conducted when the dry cleaner was not operating. In addition, all known chemical containers were removed from the suite prior to starting the indoor air sampling event in order to determine if previously detected PCE and TCE are from soil gas or dry cleaner operations. Samples were collected over a 24-hour period. Based these results, indoor air concentrations were below indoor air screening levels indicating that the potential health risk to commercial occupants of the dry cleaner from subsurface vapor migration through the building slab as a result of impacted soil gas beneath the building is unlikely. Based on this information, the consultant concluded that no further evaluation is warranted and closure of VAP Case DEH2016-LSAM-000405 was recommended. DEH concurs with closure of VAP Case DEH2016-LSAM-000405. If the building slab is ever breached beneath the affected suites, DEH will require additional assessment to determine if there is a risk to human health.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/28/2020	Source: EPA
Date Data Arrived at EDR: 11/05/2020	Telephone: N/A
Date Made Active in Reports: 11/25/2020	Last EDR Contact: 12/02/2020
Number of Days to Update: 20	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/28/2020	Source: EPA
Date Data Arrived at EDR: 11/05/2020	Telephone: N/A
Date Made Active in Reports: 11/25/2020	Last EDR Contact: 12/02/2020
Number of Days to Update: 20	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/28/2020

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/28/2020

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/28/2020	Source: EPA
Date Data Arrived at EDR: 11/05/2020	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/22/2020	Telephone: (415) 495-8895
Date Made Active in Reports: 09/18/2020	Last EDR Contact: 09/22/2020
Number of Days to Update: 88	Next Scheduled EDR Contact: 01/04/2021

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/22/2020	Telephone: (415) 495-8895
Date Made Active in Reports: 09/18/2020	Last EDR Contact: 09/22/2020

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/22/2020	Telephone: (415) 495-8895
Date Made Active in Reports: 09/18/2020	Last EDR Contact: 09/22/2020
Number of Days to Update: 88	Next Scheduled EDR Contact: 01/04/2021

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/22/2020	Telephone: (415) 495-8895
Date Made Active in Reports: 09/18/2020	Last EDR Contact: 09/22/2020

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 10/28/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/05/2020	Telephone: 703-603-0695
Date Made Active in Reports: 11/18/2020	Last EDR Contact: 11/05/2020
Number of Days to Update: 13	Next Scheduled EDR Contact: 03/08/2021
	Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 10/28/2020	Source: Environmental Protection Agency

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Number of Days to Update: 74	Next Scheduled EDR Contact: 01/04/2021
	Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/01/2020	Source: Environmental Protection Agency

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 03/18/2020

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 08/31/2020	Source: DTSC and SWRCB

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/10/2020
Date Data Arrived at EDR: 10/20/2020
Date Made Active in Reports: 11/02/2020
Number of Days to Update: 13

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Version Date:	2012
East Map:	5641310 RANCHO SANTA FE, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

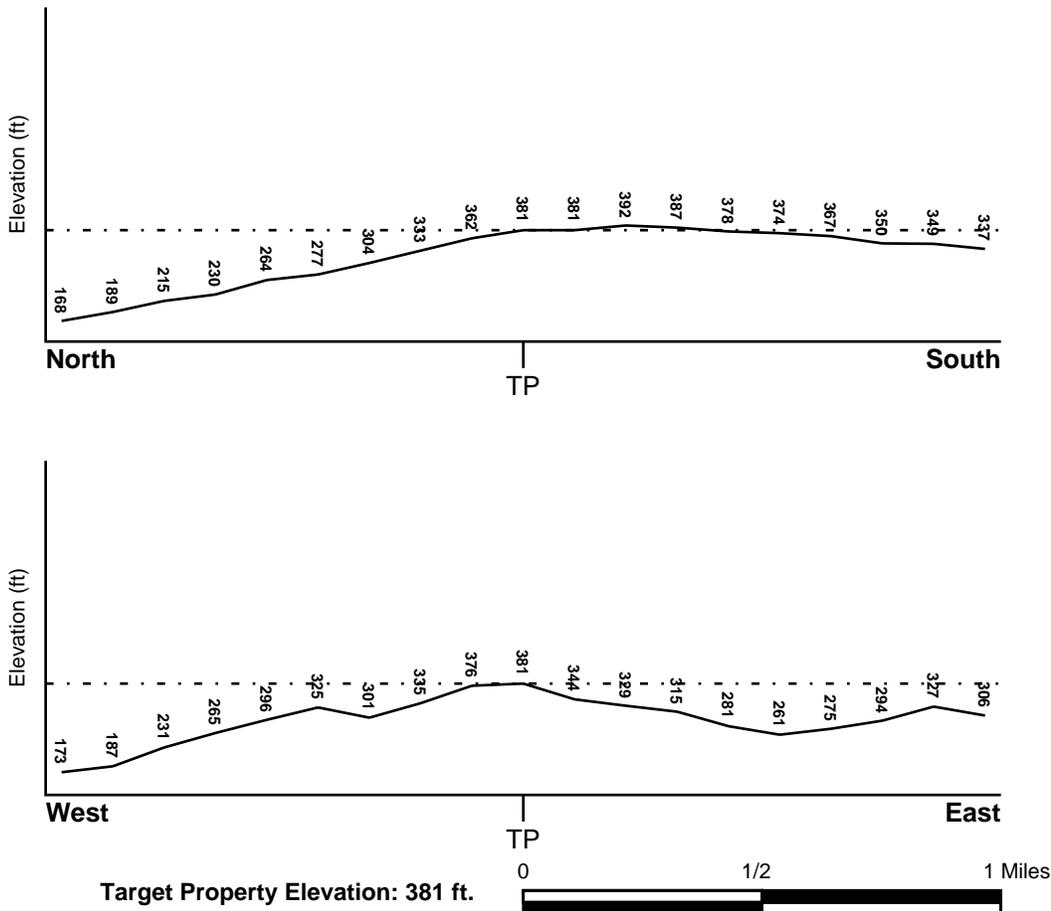

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06073C1045G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06073C1061G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
ENCINITAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
A1	1/4 - 1/2 Mile NNE	E
1G	1/4 - 1/2 Mile NNE	E

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CARLSBAD

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	20 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	Not reported	Max: Min:	Max: Min:
2	20 inches	38 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	Not reported	Max: Min:	Max: Min:
3	38 inches	50 inches	indurated	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	Not reported	Max: Min:	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: CHESTERTON

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	18 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
2	18 inches	33 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
3	33 inches	59 inches	indurated	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:

Soil Map ID: 3

Soil Component Name: CHESTERTON

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
